Thread: [\[Share\] How to get gmail.com domain](#)

~~((HACKER))~~ - May 26, 2011, 4:36 am

Hey Guys, Today i will show you how to get gmail.com domain.

Step By Step:

1. Download and install hotspot shield , Connect it (or any other us or Germany proxy)
2. Go to gmail.com > create an account
3. In sign up page change language to English (UK)
4. select location to Germany (Deutschland)
5. select Desired Login Name and check availability
(the @gmail.com will change to @googlemail.com)
6. Fill up all other questions and press "i accept create button"
7. Now u can verify your Google account using mobile or [Click here](#)

Benefit: You will get a default @googlemail.com domain instead of @gmail.com (Eg:- user@googlemail.com)

ENJOY... ?

Crush - May 26, 2011, 4:38 am

Pretty cool I guess, not very useful.

Paranoid - May 26, 2011, 4:39 am

I'd still rather have "Gmail" as it's shorter.

Ya, Not useful but it will give you default @googlemail.com domain instead of @gmail.com

01001 - May 26, 2011, 5:17 am

Nice trick..:)

thanks for the trick

thanks for the trick

Thank you for your compliment... :)

00v6 - May 26, 2011, 8:26 am

I imagine there are more original @googlemail.com accounts left than @gmail.com accounts.
Seems nice, thanks for the share.

My Pleasure... :)

Hope it will be helpful for you.

hackBoTneT - May 27, 2011, 4:19 am

Hotsheild is not working.... I just see a msg Connection Reset.

Use any U.S. or German Proxy.

Toaster - July 2, 2011, 12:14 pm

Meh not really useful but nice share.
