Thread: [\(TuT\) How to click a button that doesn't have an ID in Webbrowser \(/TuT\) \(VB.NET\)](#)

E.T - May 26, 2011, 2:16 pm

Hello g,

This tutorial will show you how to click a button that doesn't have an ID. You just need the button's name.

1. Requirement :

- a computer (lol)
- a Visual Basic Project with : a form, a webbrowser, and
_ a button.

2. Start tutorial :

A. Just put in Form_Load :

Code WebBrowser1.Navigate("http://login.facebook.com/login.php")

B. In Button_Click put :

Code Dim a As HtmlElementCollection = WebBrowser1.Document.All

For Each b As HtmlElement In a

 If b.GetAttribute("value") = "Log In" Then

 b.InvokeMember("click")

 End If

Next

Source : <http://howtostartprogramming.com/vb-net/vb-net-tutorial-49-click-button-without-id/>

I hope you like this tutorial

Sorry for my bad english :/

no add to the TUT on how to do without a ID or a Value

1NV1518L3 - May 26, 2011, 11:52 pm

For Each Elements As HtmlElement In WebBrowser1.Document.All()

 If Elements.GetAttribute("name") Like "submit" Then

 Elements.InvokeMember("click")

 End If

Next

You just copied/Pasted the code and didn't even comment it
Your "Method" won't work with every site
Because you can't guarantee that the Log In button Value will be "Log In"
You just change Log In To your needs...

(May 27, 2011 01:41 AM)Hell Guardian Wrote: [\[CITE\]](#) What if the button doesn't have a value?
all I'm saying that this is not a tutorial as he doesn't even understand that code
I'm not trying to be an ass ?
I just believe he just copied / Pasted the code
Oh, could be mate, i was making a bot maybe a week ago, and i needed this function... So this is
really good thing, and you can use it to click pictures that are buttons :)

pictures that are buttons :)You can get the Html element "Any thing not only buttons" by various
ways
Title
Src
Name
Alt
Type
Value
etc
So i was just pointing that out ?

I just want to help you :(
If this tut is not good, i will delete it ...
