Thread: [BlackOut v1.0 ~ TCP,UDP,HTTP,ICMP Flooder ~ Compact](#)

SaTaX - August 27, 2009, 5:27 pm

hello members,

I would like to introduce BlackOut. This tool is a compact (small) application which can flood in 4 different ways.

TCP,UDP,ICMP and HTTP.

For websites, HTTP is very powerful.

If you can PING someones IP with his computer, I recommend you to use UDP.

The most powerful from this tool is clearly HTTP.

Here's a picture of it, I hope it's not too compact and that you can understand the tool :P.

Wazakindjes - September 2, 2009, 10:49 am

Nice tool, I shut down a particular site for 10 minutes, you probably remember which. ?

Btw, if you're on a VPN, you won't notice much about it. :D I could do many things, but if the flooder is running for a few minutes, you notice some change. :P

Justen - September 3, 2009, 4:19 pm

Be sure to put this on a VPS, so you won't think you took a site down, when its your net lagging.

xAsylum - September 3, 2009, 4:48 pm

so how does this tool work?

Wazakindjes - September 3, 2009, 4:51 pm

Lol. That depends on what you want. If you want to shut down a site, you have to choose HTTP and then put the url in. Then choose the amount of bots and click Black Out!

Gizmo - September 4, 2009, 7:26 am

All what I get is an error when I try to flood someone or a site, sorry for the bad reply but it's true.

SaTaX - September 4, 2009, 8:48 am

Lol Your ram is too low to handle the amount of bots then...

SaTaX - September 4, 2009, 2:05 pm

lol I ran this on 3 VPS's, it's so powerful if you use it on multiple computers!

You should use it with friends, it's really funny :P.

BTW for better result, you try it in internet cafe because Internet cafes has a big bandwidth internet connection and no one can trace you if ur lucky :). I tried this in internet cafes and woowww, the victim site loads so slowly and when i go to check in www.downforeveryoneorjustme.com , it says it is offline but sometimes online. But nice apps.

relih2009 - September 25, 2009, 5:44 am

Northandos - October 28, 2010, 9:56 pm

What does this thing Use to hit with?, Built in botnet or what?

spyhigh - October 28, 2010, 9:59 pm

bro i want to know .. what is purpose to use it ..

KINGz - October 28, 2010, 10:58 pm

thanks!!! man nice share..

zuhaid - October 28, 2010, 11:18 pm

i think this tool stopped working

Any updates ?

Ryzaar - October 29, 2010, 2:41 am

*cough check the OP date... Honestly.

big hecks - October 29, 2010, 2:55 am

Look how old this thread is, thanks for the gravedig.

OP really needs to change the name.

jmanx2 - January 14, 2011, 10:55 am

hey man i would really appreciate it if u pm me the the my anti virus is pickin it up and not lettin me access.

You copyied it from the movie hackers to, so we can copy it from u 2 :)

NiceGuy1123 - March 1, 2011, 4:14 pm

How do I know what I use these "TCP or UDP" If I want someone to crash the web page for example: <http://www.paramount-gaming.com/> SORRY Bad English!

h4kr! - March 12, 2011, 6:37 pm

I first opened wireshark.(so I could see what's happening)

then I started blackout.

after a few seconds it stopped responding(windows claims)

but it was diferent in wireshark...there was thousands of packets!?

so I figured out I could open alot at once.then their router crashed!?

(why does it quit after a short time???)

ghoststarcraft - March 12, 2011, 7:25 pm

Wow, this really works and is really powerful. I tried it and took down a site. Can you get caught?

h4kr! - March 13, 2011, 12:33 pm

correction:I meant the program quit. it is obvious why the router shutdown.

tibisor123415125 - May 21, 2011, 2:01 am

Absoluty incredible , thank you man !!

Damir - May 21, 2011, 11:31 am

I'm flooding nammohotel.nl but, if I HTTP flood it than the site doesnt going crash.

Can someone help me? if you see 'google.com' i writing there: 'nammohotel.nl' is that ok?

Thanks in Advance!

pseud0 - June 16, 2011, 6:38 am

Jesus this is old as fuck and still powerful....I wish this guy was still around to thank...Works for XBL

with minimal data...fucking brilliant.

Steffie332 - July 14, 2011, 9:17 pm

Well, euhm, it doesn't really work. Because your router is like a hole to the internet, if you want to go to the internet (allone) then there is much space around you in the hole.

But if you are DDoSing, then there are more people (bots) who want to pass that hole at the same time.

TEST:

Try to connect another website during the attack.

????????????????

TheAngryhobo - December 11, 2011, 1:08 am

Thanks for sharing! This tool works very nicely for HTTP floods.

Keep up the nice work.

znake - December 11, 2011, 1:15 am

Nice BUMP man, also... Most likely not working. I recommend not downloading.. There's a lot of these out there, new ones.

blacklady - April 1, 2012, 2:56 pm

So I have a question.. Until I am flooding the web site is broken down but when I press Enough! and refresh the web site everything is okay and the site is opening.. so is that normal or? Because I want to break down this site permanently

Desmolicious - April 1, 2012, 4:08 pm

OMG! Epic Program. I would +Rep if I could!

Anonymous6562 - April 2, 2012, 4:59 pm

Looks good! Might give it a try later. Thanks

Operated - May 27, 2012, 7:25 pm

It has 18 viruses don't get here is Ink
