Thread: [Darkcomet FAQ](#)

aspirin - May 28, 2011, 4:27 am

This thread has been dedicated in the name of the Red Lions Upgrade Contest!

This giveaway was inspired by the Red Lions and Nokia2mon2's generosity!

Link to [giveaway thread](#)

Darkcomet is one of the best free RAT and is my personal favorite too. I see a lot of threads in this section regarding some of the problems people usually face. This is an attempt by me to solve them perhaps by the solutions given below which have been described along with their problems:

Important Note

Download Darkcomet only from the official site (<http://darkcomet-rat.com/>). If you download from other places, then there's a chance that it might be backdoored.

Problem 1: When you check the Network Settings and do a Network Test then you see that No-IP is coming up as not connected.

Solution 1: This is a very common problem faced by people. This sometimes doesn't affect slaves from connecting to you but sometimes can affect.

To resolve this problem and get all three green, first disable your AV and firewall. If it still doesn't work then use a VPN like nVPN.

[img]<http://i.min.us/ipiW.png>[img]

Problem 2: When I run my server on myself, I don't show up

Solution 2: First of all, This can happen because of your server being deleted by the AV and your firewall interfering with the connection. Try with both your anti-virus and firewall turned off. If this doesn't work out then try with nVPN on.

Also be sure that DUC is turned on and ports are being forwarded.

Problem 3: My slaves after restarting don't show up

Solution 3: This happens because you haven't enabled startup for your server.

Enable it either in the setting up of your RAT in the "Module Startup" section.

You can also enable it in the crypter you're going to use. Crypters such as Zero Crypter have the option to automatically add startup.

Note: Don't add in both as this can corrupt the server and prevent the slave from connecting to you.

Spoiler ([Click to View](#))

Problem 4: My slaves are not showing up in my client anymore I believe everything has been setup correctly

Solution 4: This could be because of your server not becoming FUD anymore. Crypt it again with a FUD crypter and update your server on all your slaves.

Problem 5: How do I install someone else's server on my slaves?

Solution 5: Select the no. of slaves you want to give, do a right click, select "Extra Broadcast Commands" -> "Mass Download" and enter the direct link of the crypted server you want to spread there.

Problem 6: Can you recommend some good free runtime and scantime crypters that work with

Darkcomet?

Solution 6: I'd recommend [Tyna Crypter](#).

Problem 7: How do I update my server on my slaves?

Solution 7: This is usually needed because of the previous server becoming detected and you having to replace it with a FUD one. To do this in the bottom tab go to "On Connect" -> Command should be "Update Server" -> "Add and Configure the Task" -> Give any name -> Enter the direct link of your server.

Spoiler ([Click to View](#))

Problem 8: Key strokes are not being recorded

Solution 8: Make sure that "Active Keylogger" and "Online Keylogger" are active in the Keylogger Window. Also Darkcomet is said to have a poor keylogger.

Problem 9: Remote Desktop/Remote Webcam is not working

Solution 9: Use the default settings. Make sure your servers are updated to the version of Darkcomet are using. For eg: If you're using v3.2 of Darkcomet then the slave whose Remote Desktop/Remote Webcam you're trying to view has the server which was setup in v3.2 of Darkcomet.

Problem 10: No matter what crypter I use, the server is corrupt

Solution 10: Don't use any settings when setting up Darkcomet except for entering your No-IP info. Use compression as "Disabled".

This was my attempt at helping out people new with Darkcomet. Suggestions and feedback is appreciated.

gary2266 - May 28, 2011, 5:53 am

thanks for this guide friend .Very useful

Ph03.nix - May 28, 2011, 9:20 am

Hey, big thanks helped me out.

eight - May 28, 2011, 9:26 pm

Thank you!

Bookmarked it!

Zero Crypter works and is available in the Cryptography section.

Lol5916 - May 29, 2011, 11:00 pm

Hi. Good thread so far, however I was wondering if we could ask questions here as well. My issue is that I can't get W7x64 (at least that's what I've tested on) to connect. So far only XPs are connecting to my client. The weird thing is that I ran my server on one of my desktops with W7x64 and when I run "netstat -an" I can see the IP of my proxpn account. The server is FUD and I have no firewall/AVs. Do you know what the problem could be? I follow this tut: <https://hackforums.net/showthread.php?tid=1303601> , and I have never used any DC version before 3.3, so that's not the problem.

aspirin - May 30, 2011, 5:00 am

Well it could be that your Windows 7 machine may not have the latest framework or a certain dependency which the crypter adds to the file.

Darkcomet should work on all machines and not only on a specific machine.

ChromiumHF - May 31, 2011, 7:44 am

Good guide mate, this surely will help alot of people.

Skys - June 1, 2011, 2:45 am

hey this has really help but i still have aproblem. when i test running my server in sandiebox i get this error "Exception ESocketError in module explorer.exe at 00060c07 WSACleanup" does this just happen because its sandieboxed ?

AMnova - June 1, 2011, 4:52 am

I am having trouble with my server restarting after a reboot. i just cut and pasted the server from my main computer onto the a virtual machine desktop (i am using VMware). Is there a specific place i should be installing the server for it to properly reboot itself after a computer has been restarted?

aspirin - June 1, 2011, 8:12 am

(Jun 1, 2011 02:45 AM)fuckyko Wrote: [\[CITE\]](#) hey this has really help but i still have aproblem. when i test running my server in sandiebox i get this error "Exception ESocketError in module explorer.exe at 00060c07 WSACleanup" does this just happen because its sandieboxed ?

I think it just happens because its being sandboxed. Try it on a VM.

(May 31, 2011 07:44 AM)Chromium Wrote: [\[CITE\]](#) Good guide mate, this surely will help alot of people.

Have you enabled Module Server Startup? Try the default injection path.

sinned130 - June 7, 2011, 3:02 am

Hey ,
first n1 thread

but i have still a problem : i use proxpn (i cant configure the router because it the router of my neighbour) and i installed my server corectly and i crypted it and in the network settings all connections are green. but no pc that are not in my homenetwork will doenst connect ? why ? xD

Firewall disabled
UAC disabled
AV disabled
Windows Difender disabled

i think i have the problem from "Lol5916" too because i test it on win7x64 and it dosent work but only on victims with xp <-- and thats not good next year windows 8 realese xD so i need to can connect on windows 7x64(its standard) maschines.

sry for my bad english :(

sinned130

Con7rol - June 7, 2011, 3:43 am

Can you post all pictures of your settings when crypting with ZeroCrypter? I tried yesterday and I it was corrupted.

sinned130 - June 7, 2011, 3:50 am

i use Blackcrypter but the seller has published pic's of settings for DC3.3 how to configure that... i mean on my pc (win7x64) works only on another pc not or they have xp then yes xD

oh sry i think u mean me :D

aspirin - June 7, 2011, 4:41 am

(Jun 7, 2011 03:43 AM)Control. Wrote: [\[CITE\]](#) Can you post all pictures of your settings when crypting with ZeroCrypter? I tried yesterday and I it was corrupted.

These are the settings I use for Darkcomet with Zero Crypter. Put them in the INI folder of Darkcomet.

Note: These settings are for Darkcomet v3.2.

(Jun 7, 2011 03:02 AM)sinned130 Wrote: [\[CITE\]](#) Hey ,

sinned130

The only thing could be that your settings are wrong or it gets corrupted after crypting.

(Jun 7, 2011 03:50 AM)sinned130 Wrote: [\[CITE\]](#) i use Blackcrypter but the seller has published pic's of settings for DC3.3 how to configure that... i mean on my pc (win7x64) works only on another pc not or they have xp then yes xD

oh sry i think u mean me :D

If use a specific crypter then you should use the specific settings which the author has given and it should work.

xMattJew - June 7, 2011, 1:19 pm

Great guide but I still have the problem where I cannot see myself pop up on my own RAT client, any ideas why?

aspirin - June 7, 2011, 9:50 pm

(Jun 7, 2011 01:19 PM)xMattJew Wrote: [\[CITE\]](#) Great guide but I still have the problem where I cannot see myself pop up on my own RAT client, any ideas why?

As you're on your own network sometimes you may not show up. Try with proXPN on or try your server on another PC.

Also try with switching off your Firewall and AV.

xMattJew - June 8, 2011, 9:00 pm

Okay so, I see myself pop up but it shows my IP as 127.0.0.1 when I used my No-Ip DNS :S Makes no sense, help please?:D

Mesmaroth - June 8, 2011, 10:00 pm

Nice, Thanks man. ?

aspirin - June 8, 2011, 10:06 pm

(Jun 8, 2011 09:00 PM)xMattJew Wrote: [\[CITE\]](#) Okay so, I see myself pop up but it shows my IP as 127.0.0.1 when I used my No-Ip DNS :S Makes no sense, help please?:D

Are you using proXPN when testing on yourself?

xMattJew - June 8, 2011, 10:08 pm

No I am not, don't wanna use that shit :P

grrga - June 9, 2011, 7:53 am

Thanks bro very helpful,...

aspirin - June 9, 2011, 11:45 pm

(Jun 8, 2011 10:08 PM)xMattJew Wrote: [\[CITE\]](#) No I am not, don't wanna use that shit :P

Then you may not show up.

xMattJew - June 11, 2011, 5:59 pm

I fixed it, why the hell would I need to use ProXPN if my ports are forwarded, if they already were then it doesn't really matter. I found my solution and it was in none of the tutorials I had followed, had to find it out on my own. Thanks for this though.

Eshta - June 11, 2011, 6:07 pm

Bro,

Problem 1: When you check the Network Settings and do a Network Test then you see that No-IP is coming up as not connected.

Solution 1: This is a very common problem faced by people. This sometimes doesn't affect slaves from connecting to you but sometimes can affect.

To resolve this problem and get all three green, just install and use proXPN. If you don't want to use proXPN then you can try with turning off your Firewall and AV.

This is my problem

I tried using ProXPN but i cant connect it keeps connecting for hours

Any help ?

aspirin - June 12, 2011, 10:21 pm

iuri - June 30, 2011, 1:03 pm

This tut is great, thanks for you help :)

CRT - July 11, 2011, 6:49 am

Helped me out alot. Thanks friend. V3.2 = works better than v3.3 for some reason

Pho3niXz - July 18, 2011, 9:48 am

Thank you!

Straight to bookmark, in case of problems in the future.

Hopsin - July 18, 2011, 12:09 pm

First of all,great work mate. However,if you could add a little coloring at your thread then it would make it much better. Anyway,this will help a lot of people i guess!

sarahgriffin - July 18, 2011, 2:13 pm

Really nice tut! Those were exactly the the problems I faced when setting up DC.

Im trying to set up a crypted DC server and bind it to an image/ text document. I used DC to bind the server to an image however each time the slave restarts the image pops up?

Im thinking I should create the DC server, crypt it and then bind it to a file?

Any advice?

Stenography - July 18, 2011, 3:05 pm

Helpful guide but ..

My IP in my darkcomet is 0.0.0.0 and I can't use any RAT.

I think its because of my DHCP ? Its disabled.

spikebites - July 18, 2011, 3:46 pm

(Jul 18, 2011 03:05 PM)PolarX Wrote: [CITE](#) Helpful guide but ..

I think its because of my DHCP ? Its disabled.

why wouldnt u enable DHCP?... and having 0.0.0.0 is normal and correct.

ripclaw90000 - August 15, 2011, 6:56 pm

Aspirin,

Just messaged you! please check PM and get back to me.

-thanks,
-rip

mitch00 - August 16, 2011, 3:36 am

This is really, really good and clearly written. I can see it being very useful. Thank you.

looptheloop - August 16, 2011, 4:15 am

I have the opposite problem to others, when i test my server i show up, yet when run from other computers they do not show up. I have set-up NO-IP and it works fine with Cybergate. I have ports forwarded(also have unup enabled) what could be going wrong?

angel1977 - August 16, 2011, 4:42 am

nice guide, it helped me but still having problems :(

Satoshi Nakamoto - August 21, 2011, 8:23 am

I am having trouble getting dc4 to correctly test my network. My ports are forwarded. I can see my port open on canyouseeme. My no-ip is running as well as my proxpn and I have checked the setting where dc4 changes my ip when proxpn changes. Can you help me? teamview?

I am running it on Wine.

When I click test network, I get this error: Error while starting the listen thread, exiting...

aspirin - August 25, 2011, 4:55 am

Updated the thread with some more problems and tried to make it more interesting.

Hope you guys like it.

Cpl.Sleepy - August 28, 2011, 9:01 pm

what if a person downloads it and runs , and it doesn't show up at the master computer

aspirin - September 1, 2011, 4:01 am

(Aug 28, 2011 09:01 PM)_Evil_ Wrote: [\[CITE\]](#) what if a person downloads it and runs , and it doesn't show up at the master compute

Then your server is probably corrupt after crypting.

dookie4455 - September 1, 2011, 1:34 pm

My problem isn't listed :(i forwarded my port and did all the steps in this:<https://hackforums.net/showthread.php?tid=1629709> Correctly but when on the 3rd step under dark comet, where you need to test connection, it says "Error while starting the listen thread, exiting..." my no-ip setup is correct and i did everything in that guide step by step but i just don't know how to fix it :/

aspirin - September 2, 2011, 3:49 am

(Sep 1, 2011 01:34 PM)dookie4455 Wrote: [\[CITE\]](#) My problem isn't listed :(i forwarded my port and did all the steps in this:<https://hackforums.net/showthread.php?tid=1629709> Correctly but when on the 3rd step under dark comet, where you need to test connection, it says "Error while starting the listen thread, exiting..." my no-ip setup is correct and i did everything in that guide step by step but i just don't know how to fix it :/

Ignore that error if you believe everything was done correctly.

1Time - October 30, 2011, 1:08 pm

I got a question which isn't mentioned in this topic and neither anywhere on google as far as I can tell after looking for it for 2 hours straight.

Whenever I click "Update DNS" in the No-IP Updater function I get the following error:
Code Error - Invalid IP. Invalid IP submitted is improperly formatted, is a private LAN RFC 1918 address, or an abuse blacklisted address
I am sure that the info I put in is correct. After I click Update DNS it tells me my current IP is 84.*.900
But my actual IP address is 84.*.90. So it adds an additional zero to my ip. Could that be the reason of the "Invalid IP"?

aspirin - October 31, 2011, 3:05 am

(Oct 30, 2011 01:08 PM)Sphera Wrote: [\[CITE\]](#) I got a question which isn't mentioned in this topic and neither anywhere on google as far as I can tell after looking for it for 2 hours straight.

Just use NO-IP's DUC instead of using the one in DC.

The Grifter - October 31, 2011, 3:34 am

I am having a major port-forwarding problem. This is beyond major. I've tried everything. Gotten tens of people to try and help me. This isn't an average problem. :/ The only thing I think is happening is that I have a new box next to my router, due to the fact that we switched our internet from ATT to Comcast a few weeks back.

Could that be the problem? Either way, this problem has been screwing me for WEEKS!

aspirin - October 31, 2011, 3:46 am

It could be that box, though you could always try using a VPN to do the port forward for you.

any ideas?

You getting any specific error or does it just open and crash?

Skiezo™ - December 29, 2012, 3:57 am

Unfortunately, I have find some not correct statements in your Frequently Asked Questions..

Problem 1: When you check the Network Settings and do a Network Test then you see that No-IP is coming up as not connected.

Solution 1: This is a very common problem faced by people. This sometimes doesn't affect slaves from connecting to you but sometimes can affect. To resolve this problem and get all three green, first disable your AV and firewall. If it still doesn't work then use proXPN.

No.. if it still doesn't work they might have to use a better VPN that supports Port Forwarding, ProXPN has a slow internet connection most likely.. I would prefer using a VPN that has a fast internet connection

-BlackShades VPN - All ports are available once you connect to it.

-nVPN - Has 11 countries you can connect to with a Port Forwarding panel.

Problem 2: When I run my server on myself, I don't show up

Solution 2: First of all, This can happen because of your server being deleted by the AV and your firewall interfering with the connection. Try with both your anti-virus and firewall turned off. If this doesn't work out then try with proXPN on.

Also be sure that DUC is turned on and ports are being forwarded.

When you don't show up yourself using your NO-IP, It's probably your router or modem that doesn't support NAT loopback, Loopback is a term for using public IP or name of my domain internally on a private LAN and having it resolve to internal LAN. So, while I am inside the LAN, I can see how my site looks externally. There is nothing to worry about that, Just when they test within their host computer they use their Local IP, and when they want to use it outside their host computer they use their NO-IP, ProXPN is totally not a recommendation since it is a very slow VPN.. and the port is most likely already in used by something else.

Dude, I wrote this way back.. I haven't updated it.

I know proXPN sucks but at the time of publishing this FAQ, it was popular and was recommended. This FAQ is based on my experience and in the second problem, for me the AV and firewall were interfering. When I disabled them, I was able to see myself.

Apart from the VPN (in both the problems you mentioned), I don't think there is anything wrong with the FAQ.

Try using any old version of DC?

Or disable your security software and re-download.

I didn't said there is something wrong with your FAQ.

I'm just correcting your statements in your FAQ.

And it's pretty smart if you actually know that proXPN is shit.. That you at least could name up some VPNs that actually do some good work. I mean if you have a High Quality thread going on, Don't give up on it?

It quite looks like you think I've attacked you with this post.

I'm just trying to advance your knowledge and if this thread actually based on your experience you can take a little of my experience and thank me for the post I've posted before this one.

Well, I already knew most of the stuff you pointed out.. but yeah thanks for pointing out that I need to update it and the loopback stuff.

Considering how this thread was dead for months, I wasn't really thinking about updating it but yeah I'll probably do it in next few days if I get time .

Sounds good to me :)

And I'm glad you know most of the stuff I pointed out.

And it looks like your thread is not really dead anymore.

Well yeah =)

But I'm not so sure since most of the new guys here don't really search and are just gonna post a new thread and this will get buried again for 10 months..

Klarion - February 18, 2013, 5:14 am

can somebody tell me how 'mass download' works in DC? does it open a victim's browser and download the file, or?

Tutelary - February 18, 2013, 5:23 am

(Feb 18, 2013 06:14 AM)satryiasis19 Wrote: [\[CITE\]](#) can somebody tell me how 'mass download' works in DC? does it open a slave's browser and download the file, or?

Nice gravedig, a month and a half, get three months then you'll be pr0.

For your question, your link must be a direct link else it will not work. Also, it just simply downloads and executes the file, no pixie dust required.

F-Nuke - February 18, 2013, 5:25 am

I really liked the tut. Very helpful for beginners.

does the victim see the file being downloaded in his browser?

aspirin - February 18, 2013, 12:28 pm

(Feb 18, 2013 01:25 PM)satryiasis19 Wrote: [\[CITE\]](#) does the slave see the file being downloaded in his browser?

No.

AFAIK, the file is downloaded and executed from the TEMP folder.

Klarion - February 20, 2013, 9:53 am

Honestly I have no idea but from my experience I can say that it doesn't matter if the browser is open or not.

The file is downloaded (usually in the TEMP folder) and then executed.

omzahs - February 24, 2013, 2:37 pm

I serup my RAT, tested it on myself...All worked fine then When I started DC next time I booted up I forgot to turn my AV off so it deleted the file. I had to re-install it! Does this mean I will have to setup a new RAT or can a recover my old slaves?

videogamema5ter - February 24, 2013, 6:38 pm

This is a good FAQ. It deserves to be stickied.

Your server was probably deleted.

Run the darkcomet client again and use the same ports and noip and you're good to go.
