Thread: [\[MUST SEE\] The RAT's Crew \[Tips 'n Tricks \] || Week #1](#)

Kill?Muvz - May 27, 2011, 12:22 pm

[img]http://dl.dropbox.com/u/19745684/Tips%20and%20Tricks%20RATS.png[/img]

IF YOU ARE READING THIS PLEASE READ MY SIGNATURE!

Hello fellow HF members, I'm here to present you a brand new , noob-friendly, weekly guide. I'm here representing The RAT's Crew, and for next weeks will be covering multiple subjects on R.A.T.ing and all that it involves. This will not be some regular thread. We will provide extensively detailed information on every subject.

For our first week we are going to cover the basis of R.A.Ting which is:

Simple explanation on what R.A.T's are and what they do.

List of RAT's + Download link.

Choosing the RAT that suits the readers.

Pointing out the pros and cons.

How to Port-Forward.

Extensive version. Multiple known and private methods.

What's a R.A.T.?

First of all, R.A.T stands for Remote Administration Tool.

In an illegal way [as in without permission] they are used to connect and control one or multiple computers at a time, whatever their locations are.

[There are also LEGAL R.A.T.'s that you might have heard of like: TeamViewer, UltraVNC , Etc.]

In order to infect a computer he will need to run a specific executable, your server. Meaning you'll have to SPREAD it. (There are multiple techniques, in the next week we will be covering that and will let you know the best public and private methods.)

You can build your server.exe inside your R.A.T.

What can I do once I successfully install my server on some one's computer?

Well, here is what every basic R.A.T. should be able to do:

(If yours do not have some of these options, don't use/buy it.)File management: Move, Browse, Download, Upload, Run, Replace, Rename, Delete.

Windows/Processes Control: Start, End, Pause.

Remote Desktop.

Webcam and ScreenShots Capture.

Get system informations: Such as OS, RAM, CPU, A-V Brand, PC's name, location.

Control Keyboard and Mouse.

Control Web Browser: Open page, Change HomePage, Re-Direct.

Ok, but how do they connect?

Well as they are used illegally in this case, they'll need to work in a special way in order to stay unnoticed.

To accomplish such your server will connect itself using Reverse Connection, that bypasses both Router and Windows Firewall security restrictions. Meaning, after they are infected, your victims will connect to your client, as the router doesn't control outgoing traffic it will be unnoticed.

You can read more about it [HERE](#).

Here's a simple image that might clear your mind.

[img=400x150]http://dl.dropbox.com/u/19745684/reverseconn.JPG[/img]

But specifying a bit.

There are 2 types of R.A.T's. Ones using Ports, such as TCP Sockets and UDP Sockets, and others that DO NOT require port to be open, PHP.

Some say UDP (User Datagram Protocol) is "safer" for the Hacker side, as it doesn't require any "handshaking", meaning it doesn't need to establish a connection, it might be a bit hard to understand but it's easier than it looks. Using UDP ports the client will only send a Data Request and the server will then send a Data Response. I'll latter on this thread provide an image where you can see how it works and the difference between TCP and UDP.

R.A.T's that connect using a TCP (Transmission Control Protocol) initiate themselves with a "3-way handshake". (Firstly you'll need an open TCP Port on your Router.. We will let you know how to open ports latter in this TuT.) Meaning:First a SYN packet will be sent to the server once the .exe is ran.

Secondly a SYN/ACK packet.

Third and last, a ACK packet is returned to the client. Once this ACK packet goes through the TCP port the connection is considered STABLISHED.

Once the connection is established data can be transfered freely.
Here's two images. The first is a squeme of the TCP connection.

On the second one you can see the difference between UDP and TCP, and what it involves.
[img]http://dl.dropbox.com/u/19745684/TCP_UDP.png[/img]

Here are some R.A.T.s Sources for you to study if you want to learn more about how they work:
Sources:
Spoiler ([Click to View](#))C++[Demonio RAT](#)

[psyrat2](#)

[Aryan Rat 0.6](#)

[gh0st3.6](#)

Delphi[Hsldir](#)

[ss-rat](#)

[SwartEngel RAT](#)

[Coolvibes_v0.6_FWB](#)

[darkmoon V4.11 Private](#)

VB6[Uzajan](#)

[Toxic RAT](#)

[Unknown RAT](#)

Now the PHP R.A.T.s are even easier to understand.

First of all you'll need to host your PHP files. You can use some free hosting websites, google them and they will show up.

It does simply THREE things: Once the server is executed all the information will be added to the active users list you just hosted, which your client will read.

A new connection on your client will appear.

Now you can send a command. It will be in a form of a string. The server will check every 5 secs to see if you have sent any command. If a command was sent then it will download the string, which was sent your hosted files, then will divide it by arrays and check if the command was sent to this particular server, by confirming the username + OS + other things. If not that string will be simply ignored and the log will be dumped. IF yes then it will execute the said command.

(Not sure if every PHP RATs checks every 5secs. At least mine does.)

Now to what's needed.

How to Setup + PortForward

Things you'll need:Attention.

A little amount of brains.

STEP ONE: NO-IP DNS

(Pics are self-explanatory.)

Spoiler ([Click to View](#))

Why is this needed? Well this will attribute a name to your IP, assuming your IP isn't static it will change every time you restart your Router. Imagine losing ALL your victims every time you have to restart your Router, it's a disaster. Using this, again assuming you do not have a static IP, will let you connect to your victims w/e your IP is, as when building a server you'll have to insert your No-Ip info.1. [img]<http://dl.dropbox.com/u/8179546/Killa/pic1.png>[/img]

2. [img]<http://dl-web.dropbox.com/u/8179546/Killa/pic2.png>[/img]

3. [img]<http://dl-web.dropbox.com/u/8179546/Killa/pic3.png>[/img]

4. [img]http://dl-web.dropbox.com/u/8179546/Killa/pic4.png[/img]

5. [img]http://dl-web.dropbox.com/u/8179546/Killa/pic5.png[/img]

6. Download the no-ip DUC and then:

[img]http://dl-web.dropbox.com/u/8179546/Killa/pic6.png[/img]

7. [img]http://dl-web.dropbox.com/u/8179546/Killa/pic7.png[/img]

8. Your No-Ip setup is done!.

STEP TWO: PortForwarding.

Using a D-Link Router.Spoiler ([Click to View](#))1.

Open cmd.exe

[img]http://img15.imageshack.us/img15/2232/ipconfigk.png[/img]

2.

Type Code ipconfig /all, note down your: [b]Default Gateway and IPv4 Address

[img]http://img15.imageshack.us/img15/2232/ipconfigk.png[/img]

3. Open your default Browser. Type in your Default Gateway, Press Enter.

[img]http://img836.imageshack.us/img836/5919/logindg.png[/img]

4. Login. If you don't know the password try: Admin Admin.

If it doesnt work check this website containing a full list of passes for all the routers. Click [HERE](#) or [HERE](#).

5.Go to Port Forward tab. Then: Advanced>Virtual Server. Virtual Server works well for portforwarding.

[img]http://img707.imageshack.us/img707/9672/virtualserver.png[/img]

Fill in information

Name > You choose.

IP Address> The one found on CMD.exe

Public> Port you want to forward.

Protocol> Both, do TCP would do it.

Schedule> Always

Private> Same as Public

Make sure it's checked then click save

[img]http://img5.imageshack.us/img5/6247/setupen.png[/img]

7. You're DONE!

In order to check IF your Ports are indeed OPEN download this: [PFPortCheck Program](#)

(To read more about the program visit [here](#))

Then enter your desired port and test.

Make sure you HAVE your FIREWALL DISABLED, otherwise it could conflict with the program.

Don't use canyouseeme.com, I've tried it many times and always failed to really check. Yet with that other program I successfully checked.

ALSO, if your router has it enabled, DISABLE Block Random Ping Request

TIPS:Using other Routers you should mainly look out for the following:Port Mapping

Virtual Servers

Games & Applications

Port Forwarding

Open more than one port. Why? Well, some times you may infect someone you consider a V.I.P, therefore you DO NOT want to lose the connection. Explaining it simple: Once building your server.exe you'll have to choose a port on which it will establish connection. You might know start thinking on using TWO R.A.T.'s at a time. Build the other server.exe with the other open port you got yourself a double connection :3 You can use as many R.A.T.'s at the same time as you want.

(You can't, if you can it is not recommended to, use the same ports for two different programs)

TRICKS:IF your Router enabled uPnP (Plug 'n Play) some R.A.T.s/Programs can automatically open ports. Example: Albertino Advanced R.A.T.; uTorrent [Open your uTorrent Client>Option>Preferences>Connection> Tick "Enable UPnP port mapping > in "Port Used for incoming connections:" type the port your want to open> voilà it's open!]

Routers, some times, can be a true pain in the arse right? Well for months I've had problems with mine (a Thomson TG784), couldn't get it to open ports, and after a lot of hard thinking I've figured something out:IF there are already some default Games or Applications you can assign to your network device and they DO work, what if I just re-configure those Applications and re-choose the ports I want OPEN?

Well I tried it and it WORKED.

So in those kinky Thomsons you should do this: Toolbox > Game & Application Sharing > On the bottom you'll see "Pick a task..". Choose the last option which is: Modify a game or application > pick a RANDOM application and click EDIT. > DELETE the existing port options and create new ones > Now again look at the bottom click "Assign a game or application to a local network device" > Now chose the application you modded, activate it and DONE!

This should work with all Routers.

There are also plenty of programs made to open the ports for you. An example is: Simple Port Forwarding. You can find a TuT on using it [HERE](#)

I will not cover how to "Setup" your R.A.T.s. Well to be honest the main reason is that you require no trick to set it all up. There's nothing as simple as inserting your no-ip address, typing the open ports and building you server. And there's TO many different R.A.T.s for me to post all their ways to setup.

Maybe next week. Who knows?

Oh and... You might be thinking: OHMAGAD, there's almost nothing to know about RAT's than what has just been posted.

You're wrong sir. Expect us next week to suprise you once more.

Thus ends our first week edition of: The RAT's Crew - Tips 'n Tricks.

My goal is to instruct every single HackForums member abot every single aspect of a R.A.T. and the art of RATing.

I hope you guys have enjoyed it.

Thanks for taking time to read it.

F4T4L 3RR0R - May 27, 2011, 12:59 pm

I love this idea, but all RAT clients are legal. It really depends on how you use them.

Remote Access Trojan = Illegal

Remote Administration Tool = Legal :)

Kill?Muvz - May 27, 2011, 1:07 pm

Try Online Crypter. The link is in my signature.

didoyemi - May 27, 2011, 1:50 pm

great tut bro, very nice information

{}4rk S|-|4d3 - May 27, 2011, 1:53 pm

Very good Tut!! i would have loved one like this when i was learning. Keep up the good work!

PdizLL™ - May 27, 2011, 1:58 pm

Very nice topic guys, I suppose it will help several people. Keep it up

Kill?Muvz - May 27, 2011, 2:04 pm

Thanks for all the good comments. Enjoy.

Tibit - May 27, 2011, 2:18 pm

Good Job Killa, can't wait for next week's thread. I'll have more time so I can help out on that one :D

Shyronnie - May 27, 2011, 2:32 pm

Good tutorial. You explained everything clearly and had a lot of good detail. I would +rep you if I could.

Always - May 27, 2011, 2:49 pm

Ah...here it is. Sorry I couldn't help this week, but PM me for what I can do for next week's if you need any help.

Boxing - May 27, 2011, 2:50 pm

Extremely nice tutorial, you obviously spent a lot of time on it. Nice job.

Mr Kewl - May 27, 2011, 2:58 pm

I think you should keep the thread simple by removing these symbols

? T? ILS

Anyways awesome thread.

Do0ks - May 27, 2011, 3:10 pm

Nice tutorial, I'll defiantly pass this on. Can't wait for the rest to come out.

Keep up the good work.

Kill?Muvz - May 27, 2011, 5:22 pm

(May 27, 2011 02:58 PM)Kewl Wrote: [\[CITE\]](#) I think you should keep the thread simple by removing these symbols

? T? ILS

Anyways awesome thread.

Removed. Thanks.

@Doo

Thanks for your kind words.

pal62 - May 27, 2011, 5:39 pm

outstanding tut...thanks for this share and info.

Kill?Muvz - May 28, 2011, 1:18 am

You're welcome pal62.

Enjoy

blem - May 28, 2011, 2:42 am

Ok only problem is my ISP blocks people from pinging my router so i have no idea if it is open. Anyway to solve this?

Kill?Muvz - May 28, 2011, 2:49 am

You sure there's no option on your router page to allow random ping?

WhoAmI? - May 28, 2011, 2:54 am

The RAT's crew ftw! :)

If only u posted this when I was setting my DC....:/

GJ!!!!

kuan01 - May 28, 2011, 3:14 am

wowwww amazing thread ,

thanks a lot !

corfutasos - May 28, 2011, 5:00 am

Very nice idea and guide!

Question: When I test network at DarkComet it shows that it cannot connect to my no-ip account, but I have slaves online so there is no problem with this at all :p

But how can I remove this? As I said there it doesn't affect anything but I just want to see it green :p

Thank you.

Kill?Muvz - May 28, 2011, 5:04 am

I can't answer that question as I've never faced it before. And I've only tried DC like 3-4 times. but if it still works should be a problem :3

TheUzuki.' - May 28, 2011, 5:04 am

Great Thread. ;)

Sorry that I could not contribute anything this week, but I am really busy >.<

I am looking forward to see the next "Episode".

Kill?Muvz - May 28, 2011, 5:08 am

There's no problemo :3 Almost no one contributed so I had a lot of work.

fodasse - May 28, 2011, 5:40 am

Nice!

Thanks for sharing

Regards,

Kill?Muvz - May 28, 2011, 5:43 am

You're welcome.

Btw, portugues?

fodasse - May 28, 2011, 5:45 am

Yes, iam Portuguese :P I dont know any other member Portuguese here :D

Regards, Good Job

Kill?Muvz - May 28, 2011, 5:49 am

Eu sou portugues tambem :3

I knew it by that name :3

fodasse - May 28, 2011, 5:51 am

Vives em Portugal mano?! Manda-me o teu msn, quero aprender contigo :)

Cumprimentos, João

CaptainBri - May 28, 2011, 6:14 am

Nice thread you got there mate! Thanks, I'll read it :)

Swag. - May 28, 2011, 6:56 am

thanks for pming me when u posted it :(hahaha but nice bro u put it together nicely

Kill?Muvz - May 28, 2011, 7:17 am

I posted it, and didn't PM no one brotato xD

But look at the credits, you're there :3

prince.k94 - May 28, 2011, 8:20 am

Nice information. But you told about if my ip is dynamic then what should I do. But what if the victims ip is dynamic and I am behind a firewall which do not allows incoming connections in normal way so that victim can connect to me?

Kill?Muvz - May 28, 2011, 8:23 am

Victims ip doesn't change a thing, the server will be in his computer which will connect to your client whatever his IP is.

If you have your port open nothing should block the connection.

hemescool - May 28, 2011, 8:27 am

Excellent Tut Bro

Thanks alot

prince.k94 - May 28, 2011, 8:38 am

What if the incoming connection to LAN is only allowed through SSL-VPN?

Kill?Muvz - May 28, 2011, 8:57 am

What about it? And that makes no sense to me at least. Why the heck would it only allow that type only of connection?

prince.k94 - May 28, 2011, 9:01 am

For the security purposes. It only allows those connection go normally in which an inside machine first requested for connection and this connection is also through a proxy server.

Ph03.nix - May 28, 2011, 9:15 am

Very useful guide, helped me a lot!

Thank you!

Kill?Muvz - May 28, 2011, 9:15 am

It will work anyway?

I mean it can't distinguish a proxy from a slave as a slave can also work as a proxy? I'm not really understanding your point sorry, I'm a bit tired :x

jeejeepower - May 28, 2011, 9:17 am

This is a exelent tut. That what we call a nice contribution on HF. Keep this great work. ;)

Karluz - May 28, 2011, 9:28 am

Great tutorial. It would have been very helpfull to me a few months ago. Simple and concise. Can't

wait for next week lesson! :D

*também sou português! Posso-te add ao msn, Kill?Muvz??

H??????a X™ - May 28, 2011, 9:40 am

Very nice thread, detailed , full of information and looks well written and neat. Can't wait to see the next week's thread.

Mesmaroth - May 28, 2011, 10:16 am

Nice TUT like reading these. I just need help on my cyrpting and spreading. Can't wait to see the next Tips 'n Tricks.

Kill?Muvz - May 28, 2011, 10:25 am

(May 28, 2011 10:16 AM)Mesmaroth Wrote: [\[CITE\]](#) Nice TUT like reading these. I just need help on my cyrpting and spreading. Can't wait to see the next Tips 'n Tricks.

Thank a bunch post whore <3

Jk :3

Verilog - May 28, 2011, 1:46 pm

Really a great tut i enjoyed it...:)

Xylon - May 28, 2011, 2:11 pm

The turkojan 4.0 is infected with a trojan, woot?

Kill?Muvz - May 28, 2011, 2:14 pm

I don't know, I'll try it. I didn't upload it, they are public and I guess some might be backdoored. I'll check on the turkojan.

Nop, it is not infected, tho antivirus may accuse R.A.T.s as trojans (for obvious reasons)

I can't be 100% sure it is clean you know, but atleast nothing is binded with it.

Carb0n F1ber - May 28, 2011, 11:33 pm

Wow, awesome thread here. Very HQ. Never heard of Cammy Webcam Spy though. Sounds interesting. Could you update the download link though ? It's dead ?

ATHUL4R - May 29, 2011, 1:44 am

very nice is that free rat works backdoor?

undercoveR.Stash - May 29, 2011, 1:59 pm

Woow nice thread thanks guys !

Kill?Muvz - May 30, 2011, 9:20 am

Thanks @ everyone.

You'll love this week's edition :3

Virus1x - May 30, 2011, 9:41 am

not bad great for all the kids who need to learn a thing or two

Carb0n F1ber - May 30, 2011, 10:40 am

(May 30, 2011 09:20 AM)Kill?Muvz Wrote: [\[CITE\]](#) Thanks @ everyone.

You'll love this week's edition :3

How do I follow up on it ?? Is there an announcement or something ?? This is one of my most interested topics, would love to see the next one :)

jezebel - May 30, 2011, 10:46 am

Very nice job on the tut mate gotta give this a 5 star.

Kill?Muvz - May 30, 2011, 11:23 am

(May 30, 2011 10:40 AM)Carb0n F1ber Wrote: [\[CITE\]](#) How do I follow up on it ?? Is there an announcement or something ?? This is one of my most interested topics, would love to see the next one :)

Wow I«m suprised someone REALLY liked it.

Just check at the end of the week on the RAT section :3 Or add me to your buddy list and I'll PM you when the next one is open :3

GazPromz - May 31, 2011, 5:39 am

came together really quite well, I hope each week's turns out as good as this one :D Glad to see everyone contributing to this, and by doing so helping out everyone else in the RC.

Just a suggestion, do you think after each week is done and there is a collection, you should release it to the rest of the forum, kind of like a "Look what the RC can actually do and contribute" lol, would help a lot of people, (I know ive had a load of people pm'in about things that are covered in this). Just a suggestion though :D

Kill?Muvz - June 2, 2011, 7:01 am

The second edition is starting to be written.

harshil - June 2, 2011, 7:11 am

Useful tutorial, all you members of RAT's crew, really know a lot and are very helpful thanks!

Leg?nd - June 2, 2011, 10:36 am

Thanks this helped me alot :D

Kill?Muvz - June 4, 2011, 8:31 am

Check the second edition here: <https://hackforums.net/showthread.php?tid=1349629>

PyroJack - June 5, 2011, 6:39 am

? i dont have a router how will able to do the port-forwarding??

allahnawaz2010 - June 5, 2011, 7:08 am

Thanks good information for me. Specially Port forwarding

Grey Mind - June 5, 2011, 9:51 am

Thanks man, really detailed and nice! Awesomeness.

Kill?Muvz - June 5, 2011, 12:21 pm

Check #2 edition here <https://hackforums.net/showthread.php?tid=1349629>

ccbb121 - June 5, 2011, 3:13 pm

hey can any 1 help me set this up?? pm me ill pay

Black Shadow - June 5, 2011, 4:05 pm

Nice thread very informative.

3lit3_bison - June 5, 2011, 4:22 pm

very cool thread.

cheers mate!

Kill?Muvz - June 6, 2011, 9:21 am

(Jun 5, 2011 03:13 PM)ccbb121 Wrote: [\[CITE\]](#) hey can any 1 help me set this up?? pm me ill pay
Don't be lazy. Read it all and you'll be able to do it yourself.

Bollao - June 6, 2011, 2:22 pm

What is the password on the rar that contains Sub7, Prorat, Netbus, Raptor RATS all in one.

Greetz,
BoLLao

zenawenliang - June 6, 2011, 6:47 pm

Wish I would've seen this earlier, good job!

BeNoM - June 6, 2011, 6:57 pm

Hey im just wondering if it were possible to use my victims IP as a proxy. Im using Darkcomet.

BTW nice tutorial.

Bollao - June 6, 2011, 7:43 pm

Good tut, but the free RATs should be clean.

Check the Spy-Net

Greetz,
BoLLao

Kill?Muvz - June 7, 2011, 6:57 am

The links are not mine so idk..

Bump for this, and check edition #2 <https://hackforums.net/showthread.php?tid=1349629>.

mane2011 - June 7, 2011, 7:40 am

Amazing tutorial. Thanks for all.

Kill?Muvz - June 9, 2011, 11:13 am

You're welcome. Enjoy it!

ChromiumHF - June 9, 2011, 1:06 pm

Thanks for this lovely thread!

really great and should help alot of members new to RATting :)

rkgheso209 - June 12, 2011, 9:24 pm

this really helped me. scowering the web for more info. love it.

condom - June 12, 2011, 11:13 pm

this is a very informative post.

thanks ?

Lord Gibbles - June 13, 2011, 9:52 pm

I have a question, one of my old computers I used when I was younger just randomly turns on in the night, can R.A.T's do this? I feel like it is infected with one, and my dad currently uses it so I would like to know how to clean my computer of a RAT if it is infected with one. Thanks

mygb - June 13, 2011, 10:25 pm

any tip and tricks on how to get by a windows 7 elevated prompt using a RAT screen capture feature? no RATS display this prompt.

VeLo - June 13, 2011, 10:49 pm

Awesome tut! Bookmarked this.

The MammoTh - June 13, 2011, 10:50 pm

You disurve the RAT Expert :)

VeLo - June 13, 2011, 10:53 pm

(Jun 13, 2011 10:50 PM)«MammoTh™ Wrote: [\[CITE\]](#) You disurve the RAT Expert :)

I agree with you, the RAT's Crew really are experts at what they do lol. ?

Pebis - June 13, 2011, 11:01 pm

Wow this is great thanks for this

Kill?Muvz - June 17, 2011, 5:07 am

(Jun 13, 2011 10:50 PM)«MammoTh™ Wrote: [\[CITE\]](#) You disurve the RAT Expert :)

I wish I would get it :3

Thanks for the great support.

C??????I - June 20, 2011, 11:01 pm

Great Tut Buddy.. Bumping it for Others... Thanks :)

Kill?Muvz - June 21, 2011, 12:49 pm

Thanks joker, glad you like it.

Huckzy - June 21, 2011, 1:46 pm

This is so great.. Magnific job! ?

Kill?Muvz - June 21, 2011, 2:28 pm

Well thank you. Glad you like it.

Leav - June 22, 2011, 7:42 am

Really nice, bookmarked it too ^^ Thanks

Burnzy - June 22, 2011, 7:56 am

now if someone says "rat's crew doesn't do anything" i will personally kill him. Alot of effort was

invested here by rat's crew members. Glad you guys like it.

hacksd - June 22, 2011, 8:22 am

woow thats great turt thank you to all of you

@hacksd why did you copy credits??

Kill?Muvz - June 22, 2011, 9:01 am

To thank who was in the credits :3

KoD™ - June 25, 2011, 4:42 am

This is just great, thanks!

Aesthetics - June 25, 2011, 4:44 am

Very nice tutorial mate! Thanks!

Black Shadow - June 25, 2011, 1:57 pm

You deserve the RAT award for this tutorial its very well presented.

Death by Stereo - June 25, 2011, 5:24 pm

Fantastic information, this will help a lot of people and i will definitely recommend my friends who want to learn, here!

For the use of all of your useful information i thank you,
-Hunter

Lemonade - June 26, 2011, 12:14 pm

I saw you posted the suggestions thread for the third issue of this tutorial series. I like how extensive it is also that it contains pictures that correspond to directions.

Kill?Muvz - July 1, 2011, 2:20 am

Thanks at every one for the support.

wimpykornbread - July 2, 2011, 7:59 pm

this thread is the most informative, layout was good, it really cleared up a lot of things for me, but i still cant port forward, it says its an illegal port, still cant set up my RAT i need the ports open, but any ways this was a very helpful thread, easy enough to understand especially for a new member like myself, Good job!.

Da64u - July 2, 2011, 10:03 pm

Spy-Net is infected. Please remove link.

xFeaRx - July 2, 2011, 10:10 pm

nice tips and tricks for new memebbers

noober1001 - July 3, 2011, 2:31 am

This is what I need.

Really great tut.

Thanks

Kill?Muvz - July 4, 2011, 3:33 am

Thank you guys! Expect a bigger and better thing in a couple of days.

apoel1986 - July 8, 2011, 2:45 am

thnks for this tut!!!

it really helped me...

skyline2002 - July 8, 2011, 4:59 am

Super nice tut for noob like me ^^

Kill?Muvz - July 8, 2011, 5:45 am

Glad you guys like it. Enjoy!

Stenography - July 8, 2011, 7:39 am

Bookmarked .. VERY useful thread,
Thanks.

RvsK - July 8, 2011, 7:44 am

Thanks KillaMuvz, Will be useful for alot of people.

I learned something from this thanks :)

Jack_Daniels - July 12, 2011, 12:48 pm

Nice tutorial bro, :) gunna go check out the second part now :P

Jerah - July 12, 2011, 1:15 pm

how can someone join on this crew? you need to pay?

Burnzy - July 16, 2011, 2:45 am

bu.mp cuz i see dumb threads rat's crew dont give a fuck to help here.

Kill?Muvz - July 16, 2011, 6:47 am

Yep. Bump for this. Great for newbies.

Shaggy Rogers - July 18, 2011, 6:54 am

You should make more guides, you really put a lot of time and effort into this.

BloodFire - July 18, 2011, 4:47 pm

Bump for this ^__^ maybe someone needs it.

DreX - July 18, 2011, 10:02 pm

This is a good tut will help alot of people out.

HF H4ck0r - July 25, 2011, 1:02 pm

Nice thread but in case you didn't know the Turkojan 4.0 download IS INFECTED!

it is not a rat. it is most likely a rat server! please remove this from your thread as i already executed it and im sure others will and have.

opx1230 - July 28, 2011, 6:02 am

send your server will crypt it for 1\$ if you like
but you must

1- tell me what is your rat-keylogger-bot-stealer

2-there is non .net or .net Dependencies ==choose what you like==

3-dont compress your server.exe while creating it

4-dont use any anti options

<https://hackforums.net/showthread.php?tid=1529528>

AlooshXD - August 24, 2011, 12:12 am

thanks for the amazing tutorial !! :D

jimtan05 - August 29, 2011, 12:20 pm

Tks for the info, I am a newbie here

SmokeyMcSmoke - August 29, 2011, 2:01 pm

gud tut man, even though i have all my stuff set up :D

indeed_newb - August 29, 2011, 2:40 pm

below are what you posted on the first page, i am using Cybergate and DarkComet.

does poison ivy is better than them in some other feature? or please can you tell their difference in their feature?

Thanks

Some famous free R.A.T.'s

uzrstar - September 7, 2011, 3:37 pm

how would i know my Router enabled uPnP (Plug 'n Play)????

Kill?Muvz - September 9, 2011, 1:47 am

Log in to it and if the option is checked voilá!

iSxF - September 9, 2011, 1:50 am

Very good.

thanks for the useful thread.

Slash - September 9, 2011, 2:06 am

This is so good. Wow i didnt know about this tutorial. Really good.

Hound - September 9, 2011, 2:39 am

Really descriptive.

Thanks for supporting the RATS crew.

joey213 - September 15, 2011, 12:44 pm

Another high quality guide from the rats crew. This really cleared somethings up in my thoughts about remote adminastration tools. Thank you

kaviya1 - October 15, 2011, 8:32 am

WOW

that is really awesome dude 10x ?

that is awesome bro for newbies like myself ?

thanks a lot :)

Kill?Muvz - October 15, 2011, 2:08 pm

Glad you liked it! I might consider doing a new thread in a couple of weeks ;)

CRaZZyMaNNiaCC - October 21, 2011, 11:37 am

(May 27, 2011 12:42 PM)Kill?Muvz Wrote: [\[CITE\]](#) Thanks for noticing me, I really didn't remember changing it back to uber<3

This is for you : <https://hackforums.net/showthread.php?tid=1301686>

man thnx for the work... we all do appreciate it :) (sorry if misspelled :P)

i have a question... i saw in the DarkComet website that it doesn't need any port forwarding cuz it has UPnP and its kinda automated... is it true?

and please could i have that crypter too? i cant find one that is working :'(

Ignite. - October 21, 2011, 2:30 pm

Amazing, rats crew on top of the world.

Kill?Muvz - November 2, 2011, 11:06 am

Should I make another one? :3

I feel inspired.

-HONEY- - November 2, 2011, 11:25 am

Vov Really nice tut Man nice Work.. like it... ?

Kill?Muvz - November 3, 2011, 10:15 am

Glad you liked it. I guess I'm starting a new one next week after updating my crypter.

Epiic - November 3, 2011, 11:26 am

The hardest part about RATING for me and Im sure many others is finding a good crypter and actually getting slaves (spreading).

Kawish - December 13, 2011, 9:09 am

I need someone to test my RAT please. If anyone can help me in this regard.

Kill?Muvz - December 13, 2011, 9:12 am

This is not the right place to post it o.o Search for our HelpDesk.

fwilde2 - December 15, 2011, 10:28 am

Thanks KillaMuvs

Much appreciated Tut

Dudgeoned1 - December 18, 2011, 1:53 am

This shined a lot of light on the subject of port forewording for me... Thanks a lot yo, I hope to see and hear more from you soon!

sorry I forgot to add this thread as a subscription.... Doing so now.

sunzofman - December 19, 2011, 10:17 pm

I need to learn how to make a RAT from scratch. Anyone?

crazyj - December 20, 2011, 5:50 am

Very nice tut...

Keep up the good work!

Vircolac - January 12, 2012, 8:24 pm

im getting virus warning on the RAT downloadings... is this normal? sorry im noob

Sniped M8 - January 12, 2012, 8:38 pm

wow this shit will help the noobs out :)

United States of America - January 12, 2012, 8:54 pm

Absolutely amazing tutorial. Very nice man.

abzbay777 - January 15, 2012, 6:52 am

Hello, I have downloaded NuclearRAT. ive scanned several IP's in an IP range, i port scanned this IP, found some ports open, i tried them all on the RAT but it said "connection failed, no answer" .. and before it did that it asked for a server password. i traced the IP online turned out to be an ip for some software company. anyways.. all the IP's i scanned and all the alive hosts i found are companies! i just want a regular computer to hack ! help anyone? how to find the IP adress and open port of a NORMAL computer and how to control it remotely via Nuclear RAT ??

JustinH - January 15, 2012, 6:57 am

This looks nice.

Good job

RC <3

-JustinH.

abzbay777 - January 15, 2012, 11:14 am

i downloaded the sub7 and raptor and all that stuff from #. its encrypted with ZIP passwords and the password isnt written anywhere. help ?

robin02 - January 29, 2012, 3:36 am

my service provider has blocked every port how do i

Tru?Bit - January 29, 2012, 4:23 am

Wow, nice looking thread.

Will help me and many others :)

Thank you very much!

bad - January 29, 2012, 4:44 am

Wow nice, Really nice!

Thanks.

Devil HACKer

geufke - January 30, 2012, 1:57 am

Wow, nice looking thread. Thank you very much!

Salvatore - January 30, 2012, 7:19 am

It's one of the best tutorials I've ever seen, really! Great job.

biohazardhosting - January 30, 2012, 8:03 am

Really its helpful for lotz of pplz dude..

thanks keep it up your work :)

WereBunny - February 2, 2012, 9:46 am

Um, where is the "

Choosing the RAT that suits the readers.

Pointing out the pros and cons."

section ?

Am I just an idiot or is it just not there ?

Serial Menace™ - February 4, 2012, 12:38 am

I just read that you can lose your Slaves when you restart your modem? IDK what Static IP is or anything but what if Im using a NVPN while using my rat and using NO-IP? Can I lose my slaves when turn off my NVPN, im assuming in my case I will lose connection with them because Im using my NVPN to keep my ports open but other than that lets assume I wasnt?

mausie94 - February 14, 2012, 2:22 am

thanks a lot this wil really help me

SelfStarter - February 18, 2012, 11:52 pm

This really helped me thanks alot. I appreciate your efforts.

420javafreak - February 19, 2012, 4:00 am

THX a lot for the usefull basic tipps!!

bikezone - February 19, 2012, 5:00 am

thnx very informative for those who want to start using RAT first time.

L34K3R - February 25, 2012, 9:53 am

Wow amazing simple guide, thanks for the hard work appreciate it, still new I've set up cybergate

jdass - April 7, 2012, 5:04 pm

thanks so much for the info can't wait to put it into practice

Tr3mor - April 26, 2012, 5:17 pm

The how to set up + portforward section of this tutorial has broken picture links, I tried to Pm you but have not got ten posts yet, will Pm when i can.

Oh and a question, would this method work with a usb dongle (Plugged directly into my computer not a router)

I am sure you cant portforward a dongle, besides i dont think i need to. Dongles dont block ports do they?

Stev - April 26, 2012, 5:48 pm

A very HQ thread, with enough information and pictures!

And a question, what for did you get the Blackhat award?

Tr3mor - April 26, 2012, 6:45 pm

(Apr 26, 2012 05:48 PM)Kohsti Wrote: [\[CITE\]](#) A very HQ thread, with enough information and pictures!

And a question, what for did you get the Blackhat award?

What do you mean with pictures? The links for the pictures are broken, Do you know where i can relocate them?

rantomhustler - July 18, 2012, 9:26 pm

hey guys, Umm i downloaded most of the hacking tools from this link and most of them require a password when unzipping, could you guys help me out please. Whats the PW

Quote: SUCCESS IS GOING FROM FAILURE TO FAILURE WITHOUT LOSS OF ENTHUSIASM !

SIM-1096442 - July 19, 2012, 11:08 am

Good tutorial but u got one mistake i saw you've written Thus when it's supposed to be This you can find it in the end of the tutorial

Haseo™ - July 19, 2012, 1:15 pm

very nice and useful Tutorial Thank you much for this post. Done nicely I must say

rantomhustler - July 20, 2012, 7:09 pm

password for UNZIPPING PRO RAT AND SUB7 ETC !! PLEASE ANYONE KNOW THE PASSWORD ??? Rat creww whats the pw for zip folder ?

Devising - July 21, 2012, 1:00 am

Great information can't wait for the spreading info.
Great Job

-Devising

? TAQ ? - September 15, 2012, 1:39 am

all the download links for the given RATs come up as infected on virus total, is that normal? i can't seem to find a clean RAT anywhere

Sir Cyrano - September 15, 2012, 5:37 am

Another great tutorial you made Bro. I vouch for you:D

B3nLy4Z1D - September 24, 2012, 8:59 pm

Thank you for useful information !!!

Keroyugi - October 15, 2012, 1:33 am

very nice info, cool thread, keep it up.

juragan bokep - October 17, 2012, 1:42 am

wow very impressive tut ! u must make a lot time to make this thread !

thanks a lot

delilah.black - December 8, 2012, 11:16 pm

Very helpful tutorial, thank you for taking the time to explain how to do it

Bendog - September 5, 2013, 12:19 pm

I think its a good tut but in need of the images for a more clearer picture thanks

mizo858 - September 14, 2013, 8:04 am

Realy nice THANKS

The best Crew ;D
