Thread: [Unlocking a phone to any network?](#)

xMnz - May 29, 2011, 2:50 am

Hey so i got a iphone

I cba to wait for the unlock im on baseband 04.10.01

Does anybody no a site or themselves to unlock this instantly i need it now!

help please

i dont mind paying.

Pow3r - May 29, 2011, 3:00 am

There are a few services i found on google that offer unlocks or sell software that does it.

I don't know if there are restrictions on what phones are suitable or not but the services/software do exist.

xMnz - May 29, 2011, 3:03 am

Ok cool erm got any links and can you see if anybody does it for iphone 4's

thanks

totalzz - May 29, 2011, 3:05 am

is that an iphone 4??

i think it still not available for now but i heard some say they use some sort of sim(gevey sim)

try to search that

eastfuzz - June 6, 2011, 3:43 pm

pay to unlock it only 15 pound on the internet

zerocool1161 - June 7, 2011, 3:53 am

easy to unlock iphone 4 just go on youtube and u will see the video how to do it but u got to downgrade the firmware on u iphone

Ghost Dialer - June 7, 2011, 4:44 am

Download Jailbreaker by Blackrain or the other way around it is the unlocker for iphones and is also free, i think you have to go to the site from your iphone.

Sorry if i knew how to do a spoiler i would but cant be blowed looking at html source...

<http://www.jailbreakme.com/> <--- Visit from iphone

RootKing - June 7, 2011, 8:41 am

Here is the thing, you can unlock your phone but in needs to have the right radio frequency as the networking your trying to connect to,

Example would be AT&T phones run on GSM so an AT&T phone would work with Simply Mobile; Sprint uses CDMA so a Sprint phone that's unlocked will work for another carrier who runs on a CDMA frequency...

Here is a list of CDMA and GSM carriers: Spoiler ([Click to View](#))
http://en.wikipedia.org/wiki/List_of_United_States_wireless_communications_service_providers

Here is a CDMA cracking program: <http://www.cdma-ware.com/workshop.html>

This tool is rather a reprogramming tool for the phone it's self change the serial number whatever it lets you do.

If your looking to just jailbreak or root the device it's best to do your homework for the different updates will cause problems for old jailbreaking programs, make sure you just follow the steps on how to root or Jailbreak the device.

My best work was I changed my Iphone 3GS to have the Android OS ;) (well the ability to use Android products, make it look like a droid, and act like a droid) but it still was the iOS from apple.

Cell Phone can be a lot of fun.
