FAKE MAILER

Hello guys, today I present you a site that I found the other day called <http://emkei.cz/> basically what it does it sends mails to people you want and you can enter a custom non-existent mail, for example you can use this on omegle, all you have to do is tell them from which email you will send them the mail and that there is a hot picture of you attached, bind your RAT/virus/keylogger to a .jpg file and when the victim opens your mail it will look a legit mail and picture, he just has to open the binded virus and you will have a new slave, you can use this with the omegle spreader or find an email list and just spam them with this fake mailer. You can also add your own name, and even the time when you sent the mail, I've used this fake mailer before and it got me a pretty decent number of slaves.

Hope you have luck with this! ?

(this is my first tut so please give me constructive criticism :)

Burn In Hell - June 7, 2011, 6:30 am

I need some help with this. I use a HTML code..

Screen:

[img]<http://img40.imageshack.us/img40/7084/hfhelp1.png>[/img]

Ok, that's how I want it.. So I send it to my e-mail.

Result at inbox:

[img]<http://img844.imageshack.us/img844/9929/hfhelp2.png>[/img]

No background.. Please help me out!

Greetings,
Spitbull

@Spitbull is your email settings set to display HTML?

ezeeprofit - June 7, 2011, 9:09 am

ive used this for ages and as far as im aware you cannot bind a .exe with a jpeg ?? i may be wrong :/

great share dude :D

yes you can. you can easily bind a .exe with a jpeg

DaRkHaCkErZ - June 7, 2011, 11:31 am
Heh I always use this method.

He probably means a .jpg extension as output.. and no that isn't possible. You could use an extension exploit though.

And thanks for the share TS ;)
