Thread: [\[VB8-10\]\[TuT\] How to make a custom HWID Program \[TuT\]](#)

.Ganja - June 6, 2011, 8:31 am

Project 1

What you will need :

FileAve Account

Visual Basic

This thing called a brain :)

Start by creating a Windows Form Application, and add the following:

3 Labels

3 TextBox's

2 Buttons

Put the following name with the buttons, labels, and TextBox's

Label 1 - Username:

Label 2 - Password:

Label 3 - HWID:

TextBox1 - "" (Don't put anything in the TextBox)

TextBox2 - "" (Don't put anything in the TextBox)

TextBox3 - "" (Read Only - True) (Don't put anything in the TextBox)

Button 1 - Login

Button 2 - Get HWID

Now it should look like this :

[img]http://img23.imageshack.us/img23/9241/login1o.png[/img]

Double click Form 1, erase everything and add this code :

Code Imports System.Management

Public Class Login

Private Sub Login_Load(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles MyBase.Load

Dim cpuInfo As String = String.Empty

Dim mc As New ManagementClass("win32_processor")

Dim moc As ManagementObjectCollection = mc.GetInstances()

For Each mo As ManagementObject In moc

If cpuInfo = "" Then

cpuInfo = mo.Properties("processorID").Value.ToString()

Exit For

End If

Next

TextBox3.Text = cpuInfo

End Sub

Private Sub Button2_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button2.Click

Form1.Show()

End Sub

Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button1.Click

If TextBox1.Text = "" Or TextBox1.Text = "" Then

MsgBox("Please enter Username/Password")

End If

Dim cpuInfo As String = String.Empty

Dim mc As New ManagementClass("win32_processor")

Dim moc As ManagementObjectCollection = mc.GetInstances()

For Each mo As ManagementObject In moc

If cpuInfo = "" Then

cpuInfo = mo.Properties("processorID").Value.ToString()

Exit For

End If

Next

Dim wc3 As New System.Net.WebClient

Dim user As String = wc3.DownloadString("http://youraccountname.fileave.com/HWID/user.txt")

Dim pass As String = wc3.DownloadString("http://youraccountname.fileave.com/HWID/pass.txt")

Dim hwid As String = wc3.DownloadString("http://youraccountname.fileave.com/HWID/hwid.txt ")

If user.Contains(": " & TextBox1.Text & ":") And pass.Contains(": " & TextBox2.Text & ":") And
hwid.Contains(cpuInfo) Then

Me.Hide()

Form1.Show()

Else

MsgBox("You don't have access")

End If

End Sub

Private Sub TextBox2_TextChanged(ByVal sender As System.Object, ByVal e As
System.EventArgs) Handles TextBox2.TextChanged

End Sub

End Class

Project 2

Add a Windows Form to Project 1.

1 Label

2 Buttons

1 TextBox

Put the following name with the buttons, labels, and TextBox's

Label 1 - HWID:

Button 1 - Check HWID

Button 2 - Copy HWID

TextBox 1 - "" (Don't put anything in the TextBox)

Now it should look like this :

[img]<http://img89.imageshack.us/img89/5204/login2q.png>[/img]

Double click Form 1, erase everything and add this code :

Code Imports System.Management

Public Class Form1

Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles MyBase.Load

Dim cpuInfo As String = String.Empty

Dim mc As New ManagementClass("win32_processor")

Dim moc As ManagementObjectCollection = mc.GetInstances()

For Each mo As ManagementObject In moc

If cpuInfo = "" Then

cpuInfo = mo.Properties("processorID").Value.ToString()

Exit For

End If

Next

TextBox1.Text = cpuInfo

End Sub

Private Sub Button2_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button2.Click

Dim cpuInfo As String = String.Empty

Dim mc As New ManagementClass("win32_processor")

Dim moc As ManagementObjectCollection = mc.GetInstances()

For Each mo As ManagementObject In moc

If cpuInfo = "" Then

cpuInfo = mo.Properties("processorID").Value.ToString()

Exit For

End If

Next

Try

Clipboard.SetDataObject(cpuInfo)

MsgBox("Copied")

Catch ex As Exception

MsgBox("Failed to copy")

End Try

End Sub

Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button1.Click

Dim cpuInfo As String = String.Empty

Dim mc As New ManagementClass("win32_processor")

Dim moc As ManagementObjectCollection = mc.GetInstances()

For Each mo As ManagementObject In moc

If cpuInfo = "" Then

cpuInfo = mo.Properties("processorID").Value.ToString()

Exit For

```
End If
Next
```

```
Dim wc3 As New System.Net.WebClient
Dim http3 As String = wc3.DownloadString("http://youraccountname.fileave.com/HWID/hwid.txt ")
```

```
If http3.Contains(cpuInfo) Then
    MsgBox("Your HWID is currently active",MsgBoxStyle.Information, "Check")
Else
    MsgBox("Your HWID is not registered", MsgBoxStyle.Information, "Check")
End If
```

```
End Sub
```

```
Private Sub TextBox1_TextChanged(ByVal sender As System.Object, ByVal e As
System.EventArgs) Handles TextBox1.TextChanged
```

```
End Sub
End Class
```

After your done with EVERYTHING above do the following :

Note : In the code you will see where it says "http://youraccountname.fileave.com/HWID/" Replace "youraccountname" with your account name. This will make sense when we move on.

Step 1 : Go to FileAve.com and Login.

Step 2 : Hit "Upload" and make a new directory called "HWID"

Step 3 : Go in that Directory and click "Create Text File"

Step 4 : Make one HWID.txt, pass.txt, user.txt

Step 5 : When you make all of them your done! Then when you want to register someones application just simply get them to tell you their HWID then register it with FileAve. Get him/her to tell you the username and password they want, then put their HWID in the "HWID.txt" file. Put the username they want in "user.txt" and the password they want in "pass.txt" When you get someones username you always put the username in between the : : (Example :username:) and the password is the same (Example :password:) the password they want will go between the :: . If you need any help private message me and ill help you, thanks.

%99.99 Credits go to FileX

Eternal Five - June 6, 2011, 8:33 am

This is very basic and easy to crack, but usefull if you want to improve it ^^

supa - June 6, 2011, 8:43 am

Yea a simple redirect will let you in.

TwilightSpurkle - June 6, 2011, 8:49 am

Nice Copy-Pasted tutorial!

.Ganja - June 6, 2011, 8:54 am

I didn't copy and paste? Give me the thread then... If I copied and paste then I wouldn't have any fucking bold or code in it. Think bro. And stop trashing my thread.

TwilightSpurkle - June 6, 2011, 8:56 am

(Jun 6, 2011 08:54 AM)T-Boner Wrote: [\[CITE\]](#) I didn't copy and paste? Give me the thread then... If I copied and paste then I wouldn't have any fucking bold or code in it. Think bro. And stop trashing my thread.

You copied code:

PHP Code

```
<?php
```

```
MsgBox("Copied")
```

```
    Catch ex As Exception
```

```
        MsgBox("Failed to copy")
```

```
End Try
```

I saw it somewhere!

.Ganja - June 6, 2011, 9:01 am

ROFL, Funny bro, so I can't say Failed to copy? Bro, you mad?

FileX - June 6, 2011, 9:08 am

Tbh, this is the almost the same as my post..

?Demon - June 6, 2011, 9:14 am

(Jun 6, 2011 09:08 AM)FileX Wrote: [\[CITE\]](#) Tbh, this is the almost the same as my post..

<https://hackforums.net/showthread.php?tid=1306559>

Your post is the same as almost 10 others, so don't feel left out.

Deceptive - June 6, 2011, 10:48 am

This is stupid, why can't you just put it in one text file and split it?

Coleak - June 6, 2011, 11:03 am

Why... Why don't you take a picture of the code instead of pasteing it into the thread (thus making the user actually have to do some work...)

.Ganja - June 6, 2011, 12:11 pm

Omfg, w/e then delete the fucking thread.

.bLaZeD - June 6, 2011, 12:13 pm

Thanks, this has never been posted ever before.

@Off-topic: .bLaZeD lost main PC D: I got caught drinking<3

Perplexity - June 6, 2011, 12:21 pm

TBone, I know you copied and pasted this whole thing.

Yesterday you were posting shitty threads about WebBrowsers, now suddenly a HWID System??

.Ganja - June 6, 2011, 12:26 pm

I gave credits? Why are you all trashing?

FileX - June 6, 2011, 12:28 pm

Thruh: He asked for help on my HWID tut, I helped him and improved it, and now he posts tut of it? Lol.

bobolobo - June 6, 2011, 12:30 pm

Why does you show the person using the system the HWID, no reason for that.

.Ganja - June 6, 2011, 12:30 pm

Sorry bout this guys, I shouldn't have, its his work.

Dimitrije - August 8, 2011, 2:32 am

I get this error:

Code ManagementObject is not defined.
How to fix it?

.bLaZeD - August 8, 2011, 2:43 am

Add system.management as a reference.
Import system.management

@mr grave digger

Dimitrije - August 8, 2011, 3:41 am

yes I did and still get error
ahh i had to add reference, fixed !
