Thread: [?Tutorial? How to DoS Apache servers!](#)

Anonymous.7654 - June 8, 2011, 9:59 am

Hello HackForums.net Members, Today i show Tutorial how to DoS Apache servers.

Im using Linux System, Distribution Ubuntu 11.04 and Slowloris Perl Script.

Little Intro

? Slowloris - the low bandwidth, yet greedy and poisonous HTTP client!

? More Information about Slowloris (Official Website) [HERE](#)

? Why i use Linux? Because Slowloris requires more than a few hundred sockets to work (sometimes a thousand or more)

? How i can check Website Online or Offline? [HERE](#)

? I need use VPN? Yes i recommended use VPN because server Administrator can see your IP Address.

? Slowloris working

Apache 1.x

Apache 2.x

dhttpd

GoAhead WebServer

Getting Started

1. Install Perl. Go to Terminal, type "sudo apt-get install perl" Install.

2. Download Slowloris Perl Script - [HERE](#)

3. Copy script your Favorite Text Editor, save "slowloris.pl"

4. Drop file to Linux Home Folder

5. Edit "slowloris.pl" file Permissions

I like Slowloris :) And i hope i good explaining :P

QBUGS - June 8, 2011, 11:56 am

But is this safe? Can no one trace you that you just DDoSed a website only using a VPN?

Anonymous.7654 - June 8, 2011, 12:10 pm

If you use NOT FREE VPN i say SAFE,but if Free VPN you can get problems.

Komet - June 8, 2011, 10:13 pm
