I know this is already out there. I know there are other downloads, but a lot of people have it behind some stupid \$harecash offer. I know there are a lot of people that don't want to complete those offers or that can't. So I thought I would upload it to Mediafire for everyone.

iStealer 6.0 Legends

[img]http://img694.imageshack.us/img694/8508/screenshot07l.jpg[/img]

It will show up as a virus. The builder isn't backdoored. I tested it with sandboxie and no other processes started.

Say thanks and comment!

I haven't touched it (i.e. binded or crypted or anything) and I've used it. It didn't mess with my computer at all. I've checked my startup and did a Hijack this scan. Everything seems ok.

bredsticks - June 12, 2011, 4:13 pm

Anyone else need this? Not very many out there that aren't \$harecash

ifAwakeCode - June 12, 2011, 5:01 pm

nolocation - June 15, 2011, 8:14 am

(Jun 15, 2011 08:14 AM)nolocation Wrote: [\[CITE\]](#) anybody sure..that is not a virus... :(
It will show up as a virus because its used to make a virus. It won't infect your computer when you run it, I promise.

Just run it sandboxed if you don't trust it.

Surveys suck! And I'm keepin all my posts on HF survey free because this needs to be a group of people that share their knowledge for free, not for the .40 \$sharecash pays them for a DL.

SkyWalker™ - June 16, 2011, 12:12 am
