Thread: [\[Private\] Use Cpanel to setup Istealer and protect your logs](#)

**vb0xed** - June 12, 2011, 5:39 am

Hello everyone there , well , i saw a tutorial on an arabic forum made by my friend M4MiM4N so i asked him if i can translate it and post it here and he accepted Victoire , so let's go ^^ ( so all credits go to M4MiM4N from Dev-Point ? )

Many people have problems setting up Istealer on a private host , which will remove ur logs .. Bebe-pleure .. but today , i found a private way to setup Istealer on hacked Cpanel so the logs will stay longer Thumbsup

This method will work only with people who have Cpanel ( hacked or their own Cpanel )

1-Requirment :

\*Istealer server

\*Cpanel ( hacked or your own )

2-Tutorial :

I hate it to see the imageshack :domain unregistered: , I'll reload a few more =]

**vb0xed** - *June 13, 2011, 12:50 pm*

sorry but next time i will upload it to another website :)

i hope you like the tutorial anyway :)
