Thread: [Have faith | Ultimate PortForwarding Guide | Step-by-Step | No0B Friendly | PICTURES!](#)

Diamond Supply Company - June 12, 2011, 3:40 pm

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/port.png>[/IMG]

Hello, and welcome to my thread, during your reading of this thread, I hope to teach you, as the reader how to forward your ports, and whether the task will be possible.

Let's begin.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/Port1.png>[/IMG]

although hard to explain, I'll use a little analogy.

Portforwarding is simply opening up one or more of your Router's ports, in order for a program to allow inbound and outbound connections.

Remember: A port can only be used by one program at a time.

Think of ports like this, A port is a gateway, a motorway, and the information travelling through your ports, are the vehicles,

A car travels along a motorway, and can travel pretty fast, but is often stopped because of clutter.

Well, if we were to add another road on the motorway, or 'assign' certain vehicles to one type of highway, the cars, or information, could get through a lot quicker.

If you're portforwarding for a RAT, which I assume you are, the ports a used to send data connecting you and your infected's PC.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/PORT2.png>[/IMG]

Gateways that allow inbound / outbound connections.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/PORT3-1.png>[/IMG]

You're going to have to find out your router model, and make.

You can simply do this by visiting your default gateway, Usually: 192.168.1.1 - You will be prompted by a login, the default login is

Username: admin

Password: admin

Your system info (Router info) Will be the home page, usually.

It'll look like this:

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/sys.png>[/IMG]

Notice the name of my Router is 'Echolife HG520B' You'll need to remember this.

Visit: http://portforward.com/english/routers/port_forwarding/routerindex.htm

That site has a router model, and make list. Find your router there, or just follow my tutorial.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/beef.png>[/IMG]

Within your Router, You WILL have to make some changes.

Using your Router's navigation bar, navigate to 'Advanced'

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/ad.png>[/IMG]

Within this, look for 'Firewall' or 'Firewall Settings' disable this firewall, often there are 2 options, 'Firewall' and 'SPI' You should disable both.

Within the 'Advanced' Section, look for UPnP.

Enable UPnP (Universal Plug and Play), as this allow inbound / outbound connections.

Also, Disable windows Firewall. or, allow your RAT to make inbound / outbound connections.

Now, to Forward the port(s).

Navigate to NAT, It'll be in the 'Basic' Section, Instead of 'Advanced'

Click 'Virtual Server'

Within 'Virtual Server' You'll have many options to fill in.

Fill in like so.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/pf.png>[/IMG]

Quote:Application: ANYTHING

Protocall: ALL

Start & end Port number: Any, But 81&82 are easy.

Local IP: See below.

For your Local IP.

Navigate to cmd. (command prompt), run as admin.

Type 'ipconfig' (remove quotations).

Within the text that just popped it, find Ipv4 address, Enter this into Local IP

NOTE: If you ever reset your router, your IPv4 address WILL change.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/I00l.png>[/IMG]

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/PORT4-1.png>[/IMG]

If you cannot open your ports manually, CALL YOUR ISP. Ask them to open it. If they ask why, say the game you're playing requires specific ports to be open.

ALTERNATIVELY - Buy xviscerals VPN - with open ports.

CHECK PORTS HERE:

PFPORTCHECKER- <http://www.portforward.com/store/PFPortChecker.exe>

canyouseeme.org (Not as reliable)

Blackshades NET also has a built in portchecker.

[IMG]<http://i991.photobucket.com/albums/af39/LegendaryRyan/PORT5.png>[/IMG]

Me. Vexd of hackforums.net

Mike Bars - June 12, 2011, 4:10 pm

there are tons and tons of these out but this looks really Decent.

I am sure a lot of new Ratters will find this information helpful.

t5imi - June 12, 2011, 4:11 pm

Nice tutorial for noobs, hope they enjoy

Diamond Supply Company - June 12, 2011, 4:14 pm

Thanks for the feedback, I tried to make it as simple as possible, whilst it being as informative as it could ever be!

LegoFan - June 12, 2011, 5:23 pm

Good really detailed its fun to see people still contribute instead of flaming/trolling.

It should be MUST READ to a new members on this forum.

Thanks for taking your time.

nuka - June 12, 2011, 5:27 pm

very good and detailed.

well done

Diamond Supply Company - June 12, 2011, 11:41 pm

Thanks a lot guys, It took me a while to create this.

Jinu - June 13, 2011, 8:17 am

Nice TUT very very thank you bro!!

aspirin - June 13, 2011, 8:22 am

This will really help a lot of noobs out. BTW: You should add a part where the local IP is made static.

Diamond Supply Company - June 13, 2011, 9:21 am

I want more people to see this.

Jinu - June 13, 2011, 12:51 pm

Which port to use for my Cybergate?

Mike Bars - June 13, 2011, 2:13 pm

(Jun 13, 2011 12:51 PM)Jinu Wrote: [\[CITE\]](#) Which port to use for my Cybergate?
you can use any port you want.
can be port
90, 81, 72, 55, 1306, 3070 or whatever you wanna use.

Diamond Supply Company - June 13, 2011, 11:53 pm

People need to see this. and read it!

VeLo - June 13, 2011, 11:56 pm

Nice tut. I like the font you used to separate each section :P

Pebis - June 14, 2011, 12:03 am

Thanks for this tutorial XD

Diamond Supply Company - June 14, 2011, 7:58 am

(Jun 14, 2011 12:03 AM)Avrav97 Wrote: [\[CITE\]](#) Thanks for this tutorial XD
It's alright, hope i taught you something!

Jinu - June 14, 2011, 8:19 am

hey i check my server.exe with myself is working well

But After turn-off and start my PC then my server.exe not working why?

Diamond Supply Company - June 14, 2011, 1:15 pm

It won't always work on your self.
Deserves more recognition.

LOL AT RAT SUPPORT 3*ing the thread. u jelly?

Diamond Supply Company - June 16, 2011, 7:32 am

ing this, needs recognition.

Salmanisback - June 16, 2011, 7:01 pm

how to know :

its not this to acess the thing <http://192.168.1.1/>
what can it be

Mike Bars - June 16, 2011, 7:07 pm

(Jun 16, 2011 07:01 PM)Salmanisback Wrote: [\[CITE\]](#) how to know :

what can it be

yours might be different go to

Start - Run - Cmd then type ipconfig. -then look where it says Default Gateway then put that in the URL Bar.

Diamond Supply Company - June 16, 2011, 11:47 pm

Yeah, Check your default gateway. that's basically your router's gateway

Diamond Supply Company - June 18, 2011, 3:57 am

Come on guys, this is HQ :)

Diamond Supply Company - June 19, 2011, 10:03 am

This needs more recognition maynnnee

Diamond Supply Company - June 22, 2011, 12:34 pm

l2portforward yew newbzz.

Kizeus - June 22, 2011, 2:13 pm

ah, now I see what i was doing wrong. Thanks!

Diamond Supply Company - June 22, 2011, 2:14 pm

Glad to know I helped someone! thanks!

dramatic - October 5, 2011, 1:15 am

Hey man, I followed your guide for my router, and I opened Port 81...Then using the port checker tool it says the TCP Protocol Port IS NOT Open, but the UDP Port IS OPEN, does this mean I can start using RATs?

Diamond Supply Company - October 5, 2011, 9:12 am

(Oct 5, 2011 01:15 AM)dramatic Wrote: [\[CITE\]](#) Hey man, I followed your guide for my router, and I opened Port 81...Then using the port checker tool it says the TCP Protocol Port IS NOT Open, but the UDP Port IS OPEN, does this mean I can start using RATs?

Sure. Test your client! If it works. Then you did good!

Hreidmar - October 5, 2011, 4:10 pm

Thank you for the tutorial =) message

MontyDog171 - October 5, 2011, 4:45 pm

sorrie for my bad grammar i am dutch i speak most of the time frisian dialect :-)--> toy coins

Arrest the new lillith for her illigal terroristic act what has to do with 9/11

I think that new bitch is a mass murderer!

Kill all criminals!Stream the hardcore music,the hardest scene in the worldGrammar bad me neathertaler
