Okay so you get the source from the pastebin link in the OP.

Create a new class in Visual Basic.

Clear the class and paste the theme code into it.

Run a Debug

And then go into tools section, and it should be at the top in like a custom folder or drop down.

I like it, a lot! Try making the progressbar backcolor a bit darker though, the contrast will help bring it out more. =]

Or change the progressbar bordercolor, as it does look a little off compared to the rest of the controls. :]

I use Aeonhack's tutorials and his classes for making themes.

Check out his videos here: <http://www.youtube.com/galacticequinox>

Thanks everyone else. :)

On my next theme I'll make sure that all the controls stand out.
