Thread: [Ciltrex Theme\[Src Released\]](#)

.Astro - June 12, 2011, 11:27 pm

Okay, so I decided I'm going to use AeonHack's tutorial and use the base he's given on his Youtube video.

I made a basic starter for me.

Spoiler ([Click to View](#))[IMG]

After I create this base, I'll get onto more "technical" work.

Stage 1 "The Base" .. Completed.

Spoiler ([Click to View](#))Ignore the white, and the dotted borders.

[IMG]

Stage 2 "Buttoned" .. Completed.

Spoiler ([Click to View](#))

Stage 3 "Labels." Competed.

You can get the source code here:

<http://pastebin.com/4m5xRv9H>

VZ3R - June 12, 2011, 11:30 pm

Cool, I hope it turns out nice. Good luck mate :D

Fairly basic as it's just a square, but it defiantly has potential.

.Astro - June 12, 2011, 11:39 pm

I made that in Photoshp.

I'm not going to make a big fancy theme just yet.

I want to learn the basics of it before producing something a lot of people would like.

You are doing it the right way.

You start with the basics and then with something big.

Noobs start with something big, fail, get flammed on and leave ^^

Goodluck with your theme.

cybr - June 12, 2011, 11:51 pm

It's a nice color to start with.

.Astro - June 12, 2011, 11:54 pm

I was going to do a lighter gray, but I decided not to.

I think I might make the color darker since I want to do a dark color + red, green, or yellow.

Edited the OP with my final product of Stage 1

Stage 2 "Buttoned" .. In progress

soemthing says to me that this theme will have future ;)

Keep on work and good luck?

H3x0S - June 13, 2011, 3:35 am

So far, it's amazing. Especially the red header!

Cody8295 - June 13, 2011, 3:36 am

Looks pretty amazing, great work.

.Astro - June 13, 2011, 3:37 am

Alright, well I finished the button awhile ago. But I'm still going to keep going farther with this project to see what it turns into.

Updating OP with source code + video.

RiperFish - June 13, 2011, 5:11 am

at least your trying to be the next Aeonhack xD, Good work :).

.Astro - June 13, 2011, 5:31 am

Roflmao.~

That would take a lot of time, considering the fact he's en expert at Vb.NET.

.Astro - June 14, 2011, 2:42 pm

Updated OP.

If you get the error in the Designer.vb

Type "Ctheme.Ctheme" is not defined.

Just delete the first Ctheme, or change it Global.
Same goes for all other components.

Apple - June 14, 2011, 2:48 pm

[img]http://gfx.net/di-Q3HL.png[/img]

This would actually be really easy to make in VB

.Astro - June 14, 2011, 2:49 pm

.. Okay?

You realize that was just the base, right?

you said you made it in photoshop (the image I posted) which is why I said that so you wouldn't be discouraged

.Astro - June 16, 2011, 12:56 pm

Oh, I guess I took it wrong, lol.

I thought you meant like it wasn't anything hard, or something like it's too easy, and so on.
