Thread: [Fixes for "HTTP server is normal" Problem](#)

I'm Gone - June 14, 2011, 7:28 pm

For some people trying to access HF You get this screen

Possible fixes are

Access HF by <https://hackforums.net/> Even now when i go to <https://hackforums.net/> it Will Give me the " Http server is normal screen. Also when you Click the You will also be redirected to <https://hackforums.net/> which will give you the error.

Going to <https://hackforums.net/index.php>

than

than

than

han drag and drop the host file inoto notepad

If you have :

208.115.245.75 hackforums.net

208.115.245.75 hackforums.net

Delete than save the host files and refresh the page or try previous links.

Mike. - June 14, 2011, 7:39 pm

I am talking with Omni about this atm, there is also a problem without the host files;

Yes I do, and also I can't access Hackforums with www. in front of it; pics of it

Pics are from 10 mins ago

<https://i.imgur.com/XNnnJ.png>

I can load without www. in front of it

<https://i.imgur.com/Vzo4Q.png>

Picture of host; <https://i.imgur.com/NLFkw.png>

Here is pics just taken; <https://i.imgur.com/0pluY.png> and <https://i.imgur.com/8Lug8.png> HTTP sever error

Just sent that to him, so yeah..

Omni said the DNS changed again so you should have the 6 at the end instead of 5, but it's still messed up so idk. The first two pic is without host files, so nothing in them.

I'm Gone - June 14, 2011, 7:44 pm

Well try adding index.php at the end. try this <https://hackforums.net/index.php> and if that doesn't work try <https://hackforums.net/index.php>

Mike. - June 14, 2011, 7:50 pm

I don't know HF has been messing up all day, + I cant see my post with (<https://hackforums.net/search.php?action=finduser&uid=109620>) so I can't see if people replied to me.

I don't know Ima leave them in my host files for a bit and see if anything changes.

I'm Gone - June 14, 2011, 7:57 pm

it won't, Try My methods and and add index.php something will work.

Shibe - June 14, 2011, 7:58 pm

Thanks for the help man, just got it working.

Mike. - June 14, 2011, 8:03 pm

(Jun 14, 2011 07:57 PM)Dimes Wrote: [\[CITE\]](#) it won't, Try My methods and and add index.php something will work.

You have the wrong IP in there, that's why it's not working..

There has been on and off errors though, with and without the host files changed.

I'm Gone - June 14, 2011, 8:04 pm

Well i've removed HF from my host files and its working.

Mike. - June 14, 2011, 8:06 pm

Yeah it will work, but you will get errors most likely, the only reason I have them in there is because it's been fucking up and doing shit like;

[spoiler][spoiler] Now I can't edit Imao...

Widow's Peak - June 14, 2011, 8:25 pm

Why can't omni post a simple twitter update? I thought the problem was for everyone..

I'm Gone - June 14, 2011, 8:42 pm

Its happening to quite a handful of peoplr

Mike. - June 14, 2011, 8:46 pm

Spoiler [\(Click to View\)](#)

Nothing in host files... I am getting so many errors I don't know what to do..

I'm Gone - June 14, 2011, 8:55 pm

Don't try connecting to thread, try connecting to homepage first.

Mike. - June 14, 2011, 9:05 pm

Doesn't work I get a 404 page like every 5 mins, then have to wait like 20 mins for it to fix... See got

another 404 wait 10 mins back

Spoiler [\(Click to View\)](#)

That was your suggestion didn't work... I wish I was unlimited so I could PM Omni...

Black Mesa - June 14, 2011, 10:31 pm

Try configuring hackforums.net as a host and hackforums.net as a host, make sure you've got an A-record to the www.

If HF is a dedicated ip (which is the case) then just configure www. to go to the HF ip.

This IS a redneck fix, but should solve problems until a more permanent solution is found.

Mike. - June 14, 2011, 10:35 pm

Nothing is working for me, tried everything...

FUCK After HF went down the first time today, at like 2 est or so, it's been fucking up since then.

Omniscient - June 14, 2011, 10:50 pm

Your problem is DNS on your end. Not an HF problem.
