Look pretty nice the design pretty lame and the server exposed but still look like a nice work I will check on it .

Q

What stealers include at your logger ?

Thanks again , I will check on it .

Have a nice day ? !

Yes, I know, but I never felt like working on the GUI. However, I'm currently learning about adding encryptions, so I hope that I know how to FUD it this week. The stealers include Google chrome, Firefox, Internet explorer, MSN and Microsoft windows passes.

Ok and about the GUI you can look for designers in here i think someone would like to take a credit in your program , there are at your program many public codes : [, I was hoping to see some of yours never mind .

I will wait to check the program on your next update if you keep updating.

On how many machines have you tested it?

By the way, I coded a cure and I'm letting someone test it right now.

If it's a success, I will post it in the thread.

If the test mail doesn't work, then you obviously aren't able to receive any logs.

Cookie deletion
Stealers
Clipboard stealer

Confirmed working:

Block AV sites
Kill TaskMan

Either way, thanks for what is working :3

The cure works for me.

After filling in the name of the server that you run, the cure will delete the installed server and the current server and kill their processes.

Also, the clipboard logger works for me fine, but the cookie deletion can be fixed.

I have also coded new stealers, but I'm still in doubt about releasing them, since their quality are as good to be sold.

i read all 17 pages and it seems you have done an amazing job with this keylogger, so in the near future can we see a n00b proof tutorial? or can you tell me in a pm the steps for a successful server creation?

Later Edit: i have tested the server, i cured myself and now i have created another one, but for this one i wanted to change the icon, so ai used Icon Changer 3.8 and now when i run the server i got an error "Index was outside the bounds of the array"! any solution?

Yes, you can get any password you want with it, since it records all keystrokes.
And yes, it's compatible with Windows 7 32 and 64 bit and yup, it's FUD.

Regarding the tutorial, the GUI of the logger is really self-explaining, so a noob-proof tutorial would be impossible, sorry.

However, if you're stuck at the settings, simply use the recommended settings.

Btw, have you used any other icon changers besides Icon changer 3.8?

please whats the pass@?!@?@!@?@?!@?@!@?

joey213 - October 11, 2011, 11:50 am

It is working fine for my. I appreciate you also put an survey for the password since i could not solve it. Its 2/9 but it covers the main virusscanners. Thanks for the share.

When I click 'Build Server' it says: 'Your bin is done!'.

But I don't really understand it, what do I have to do now? Where is the server?
Thanks in advance.

Your server is the file called "server.exe" in the same folder as your stub and builder.

Btw, I will reFUD the stub today.
Has anybody found any bugs so far?

Not Infecting myself ?

Thanks for the keylogger gonna try it out!
Btw why is the password needed for hotmail?

Hmm i infected my brothers pc with the server file nothing is happening infecting him a hour ago some time he will send the logs? cuz the test mail worked

Chillae - October 14, 2011, 1:49 am

Doesnt really matter about the FTP uploader, but if your not going to add it, could you add a file melter? Most people click on the server a few times when it doesnt work and that causes more logs to be sent.

Thanks for the free program! :)

klingle - October 14, 2011, 8:40 am

everytime i tried to decode it,comes an error message and it doesnt work

If you select the "Force steam" option, the keylogger will delete certain files, so the password has to be retyped. The keylogger will save these in the logs, so you can read them.

@meemee360 why you scan on virus total KID?

Syslogger is one of the best free here and easiest to handle and you just play with that....wrong/

Deltahhh - *October 23, 2011, 4:10 am*

Hi,

I am kind of new to Stealers.. I have been using a few keylogger for about 6 months now but a friend a mine said stealers are better..

I have only ONE problem:

What are my SMTP-setting?

-Sorry if this is a rather Nooby question ;-)

Btw: Easy pass ;D

Grtz,

Deltahhh

Predator_Crack - October 23, 2011, 4:27 am

Stealer is not the same tool with logger.

A logger LOGS the keyboard strokes and anything the user types online and offline and then you get the logs via php/email.

A stealer will STEAL all SAVED PASSWORDS from an internet browser. Some loggers are both loggers/stealers. Just read each one of them for the features they include. As for the smtp most of mails(gmail) have a specific port for that and most of times you can find the settings on the loggger/stealer thread. Just reasearch that.

Obi-Wan Cannabis - October 23, 2011, 6:14 am

Finally got some free time to test this...

It doesn't get stored MSN passwords... I've tried on myself and it doesn't get the MSN password I have stored.

The keylogger and the opera stealer work just great...

Chrome, and Firefox stealers, I'm not sure. I have all my accounts opened on chrome, and even when I turn of the PC, they don't log off, but the program doesn't get any passwords from Chrome so I don't know.

Kill TaskManager it's working properly and so is the "cure" option.

Nice work after all! ?

Deltahhh - October 23, 2011, 8:57 am

I know the difference but I think don't know what smtp-setting are and the one mentioned in this thread are not working..

PLz help meh out over here?

Grtz,

Deltahhh

E V O - October 24, 2011, 10:43 pm

I've tried to make an icon changer myself, but that one corrupted the bins.

After that, I tried it with different sources, but it got corrupt again, even with native stubs.

If anybody thinks that he has got the source of working icon changer, I'd appreciate it if he can send it to me, so I can implement it in the builder.

Thanks in advance!

- use vpn or proxy

- try with all browsers

- * IMPORTANT -> disable all AD-BLOCKERS on your browser.

Even if you are now from zibabue it will work....

For decryptions you can use cryptoDOTcom and use your brain./

Could you fix it? Thanks in advance! :)

love your Keylogger :)

a3rosol - October 28, 2011, 1:32 pm

can you code a screenshot function? then it would be one of the best loggers around :)

guapoos - October 28, 2011, 1:40 pm

This is no longer 100% FUD, i scanned it with various websites and it's detected by few antivirus, like AVG.

Beyond Zero - October 28, 2011, 6:33 pm

Report: it's not FUD anymore. my avast detected the bin. i hope this will fix. :)

OriGinaL G.UniT - October 29, 2011, 12:23 am

Is syslogger stealer and keylogger? im confussed, name says logger but only says stealers??

hahahhahaa after a minute of cracking the pass.. i just laugh what i have been decrypted.. well lets just enjoy.

E V O - October 30, 2011, 3:22 am

I will code new features (like melt and a screen capture module) when I'm done with my exams, which will be in 5 days.

I reFUDed the stub though.

E V O

I have a problem with this Keylogger / Stealer,
In my opinion, is very good,
the only problem is that I do not receive the e-mail, password information, etc. ..
I'll explain

1. I open the software, I enter my account (gmail), I put the password, if I try I get the e-mail.
2. all right, and the test mail has arrived.
3. Check the boxes that I want (stealers - encrypt e-mail antis-clipboard-loggers) and create the server.
4. I run the server on my second PC, I wait (interval 5 min), but nothing, e-mail does not arrive. Still waiting, but nothing to do, e-mail does not arrive.

How can I fix this?

Thanks in advance ?

Beyond Zero - October 30, 2011, 8:28 pm

Here's another report:

i only get the logs. not the keystrokes.
something like this:

```
[--VLC (Direct3D output)--]  
[--vlc--]  
[--VLC media player--]  
[--]  
[--Facebook - Google Chrome--]  
[--]  
[--VLC media player--]  
[--Select one or more files to open--]  
[--VLC media player--]
```

good luck E V O! will be waiting for your next update. :)

Are you sure you typed something?

It will log the active window title, even if nothing is typed in there.

Exactly, it actually did log the window title LAST time when it worked, but this time, i wanted to hack a slave, and he opened it but i haven't recieved anything yet, it's been more then 18 hours since that, I am actually worried, i just had him, i was happy but i didn't recieve anything, i was getting paid, but now the client refuse to pay me till i give him slave's msn ID.

- It was working before, It just registered some window title, but not the written text inside, I TRIED THIS. and now, this time, it's not sending anything.

(Nov 4, 2011 03:34 PM)Nextbookhacker Wrote: [\[CITE\]](#) Thank you. Thats all I can just say is THANK YOU. GREAT LOGGER, Interface is Basic and simple, thats how I like things. Is there a paid version, or perhaps a version that will SEND logs to a different Email addy? (A SendTo option)

PS:For those who like to RUIN a good thing by scanning on VT, you should REALLY watch yourself, karma travels QUICK.

I will code that soon.

Also, my paid logger will be released this weekend.

However, it's coded by a very good friend of mine.

I can hook you up with it if you're interested?

EVO i love the fud part about the keylogger but i dislike the part where it wont run =/ can i have a little of your insight please?

mkdniki - November 4, 2011, 5:07 pm

are the stealers enabled??? thanks (well i have to make 35 characters to post :))

ian2283 - November 4, 2011, 5:44 pm

its a nice keylogger, test email worked, but just not sending logs for some reason :(

ICodeyou - November 4, 2011, 6:03 pm

Wow looks very good gonna try to get some slaves

yeah its got net framework, tried on my laptop aswell , installs ok just not sending logs, is there a quoter set? so many KB before it sends? i set it to 15 mins

totototo - November 5, 2011, 3:25 am

Doesnt work sorry and Build sever with all the right detial and stell dont work

maikiew - November 5, 2011, 4:28 am

Yeaahh Buddy Melt...haha netjess iconchanger al? Melt Doesnt work?

Just tested but its still there..:(

eye_of_the_tiger - November 5, 2011, 5:00 am

Wow, Great keylogger, easy to use and set up. and it is fud.

Stealer works like a charm :)

Great job E V O

I noticed that it dont record "@". It just put a "2" in there instead

guapoox - November 5, 2011, 5:06 am

It's has become detected with AVG, i just tried it, DAMN KIDDIES, they scan on websites!

ASTRAPI - November 5, 2011, 2:17 pm

When do you plan to add again the stealers?

OriGinaL G.UniT - November 5, 2011, 2:24 pm

evo please help. test email works.. though everytime i try run it only cmd pops up and wont install. i have ms framework 4. i got a slave waiting for it and i need this problem fixed asap

Skill1x1 - November 5, 2011, 2:37 pm

Works perfectly and is fully undetectable :) Thank you so much.

Krox - November 5, 2011, 4:20 pm

i will check your keylogger, thank you :)

Nextbookhacker - November 5, 2011, 8:02 pm

Works well when I infect myself, and send a test email, but for those who DL it and install it on other machines it wont infect some people. Now AVG detects it, NICE logger again though.

TMH - November 6, 2011, 4:12 am

Thanks for this, just what I need for the next 30 minutes haha. I'll update this post and let you know how it goes

UPDATE: worked perfect

E V O - November 6, 2011, 1:55 pm

I added a Screen Logger and it's still FUD.

Enjoy!

urk - November 6, 2011, 6:54 pm

Hopefully EVO changes the password

//

-Buck- - November 6, 2011, 8:40 pm

I just did it,
maybe youre the one who cant.

BTW

After the victim opens the keylogger i receive no logs
Why so?

Selub - November 7, 2011, 1:24 am

The keylogger works great keep try to get slaves!

~Thanks in advance.

maja3d - November 7, 2011, 1:26 am

Stealer dont work with firefox 7.0.1

Selub - November 7, 2011, 2:51 am

lol, im kinda newb how can i open task manager?
I test the logger on my self but how can i fix that task manager?

ASTRAPI - November 7, 2011, 4:20 am

When do you plan to add add again the stealers :)

It is stealing only from Chrome :(

maikiew - November 7, 2011, 5:51 am

@Devougn&Urk

U are kidding aint you..?
Its a Anti-Noob Protection u idiot...
Don't tell it on the forum..U better may edit the post...

Piden9 - November 7, 2011, 8:32 am

Thanks! Great logger! Decrypt worked fine

Selub - November 7, 2011, 9:22 am

It's works great thanks for this!
i keep posting for high reputation for you!

eye_of_the_tiger - November 7, 2011, 9:49 am

Does this only work with windows 7 64 bit?

I tried to infect the schools computers and i got an error message, it said something about stub.

The systems in school are windows xp 32 bit.

1ManArmy - November 9, 2011, 4:01 am

Avira keeps on detecting !!!! donno y

Chuck Freakin Norris - November 9, 2011, 6:53 am

it didn't delete my cookies. and another problem: whenever I write the first letter in my nickname to login into a forum or my email for example, than my password auto' shows up. and it wont log that password and acc if i dont fully write them.

but other then that, this is awesome can't wait for the full release :) thanks alot man.

Selub - November 9, 2011, 8:35 am

Can somebody help me i test it on my self but it kills my task manager lol!

BTW It's still a nice keylogger, Thanks in advance mate!

DJ PON-3 - November 9, 2011, 11:29 am

The pass is only for the noob protection?
How noob you have to be to not be able to decrypt it?

OriGinaL G.UniT - November 9, 2011, 12:04 pm

is there any specifics on what has to be installed on your pc before testing it? cause i got framwork 4...

guapoos - November 9, 2011, 1:21 pm

Bro, Syslogger is no longer FUD, or UD, it got caught by my AVG internet sec. 2012, the 1 that uses my victim.

tkborac - November 9, 2011, 3:59 pm

It is detected by AVG 8.5. How fast can you fix this?
Great work by the way. Thanks!

It's not refudded, because it still gots caught by AVG, damn i was on plans to hack victim today but no luck so far.

When you analyse it, it doesn't detect it but when you open it, it detects it.

Thanks, will add a lot of updates very soon!

r3v01uti0n - November 19, 2011, 4:39 am

Installed it on 10 of my rat slaves :)

Hope it work :)

Did survey so u willing to update keylogger if necessary :D

Thanks for this.

Xellic - November 19, 2011, 9:41 am

Wow, I've tried decrypting this 100's of times, still can't get the password :(

EDIT: LOL whoops, didn't copy and paste the whole code, got the password :) THANKS!

E V O - November 19, 2011, 11:36 am

Due the algos, the keystrokes aren't being sent anymore.

I'm fixing this right now.

Want me to put a native stub instead perhaps?

OriGinaL G.UniT - November 19, 2011, 2:48 pm

I have an older version of your logger, it doesn't seem to work for me.

Could it be possible if you give me the newer version?

Thanks in advance, and I am thinking about buying Unknown logger. Just need to save up

Please read the beginning of the thread, I will release it ASAP.

And regarding Unknown logger, I really recommend it. It's functions are totally worth the money and everything works perfectly.

OriGinaL G.UniT - November 19, 2011, 2:55 pm

Yea I was reading it, i quiet like it, But the problem is i cant quiet get syslogger to work so im not thinking of buying till i have used a working logger. I need to test =/ sorry.

Syslogger is freeware.

Unknown logger is a paid product.

If Unknown logger wouldn't work, I would not have received so many vouches.

Syslogger doesn't contain any part of the source of Unknown logger, so they are completely unrelated to each other.

If you can' de-crypt the password, your going to have to use the survey link, De-crypting isn't very hard - pm me if you want to know howto? (I will show you how, but not tell you the password - you'd have to work that out yourself)

E V O - November 20, 2011, 2:20 am

Like I said, because of people scanning on Virustotal, I have to recode a lot of functions, which takes a lot of time.

Please use the update checker in your current builder to check if the new version is released.

r3v01uti0n - November 20, 2011, 5:15 am

Got around 4 logs from different computer over night but to bad no one does something interesting :S

Anyway E V O u did a great job and it does what a keylogger needs to do.

The final fud depends on the coder himself.All these guys try the best everyday and give free shet.They have real life so be patient.

The downloader will help you in order to hidden download and execute another rat server or executably type of malware with your logger.

By the time the target machine, being infected with syslogger immediatly downloader function hiddens download and execute the application you have setup to the downloader input space of syslogger.If you have given a direct link of a rat server or another logger then that will be downloaded.

im having trouble sending mail, even test does not work for me, even though its legit working user/pass,

any ideas why its not working ? after checking the thing , still waiting for results to my mail from my own computers,

but i did notice , it did not clear cookies on my comp, and pretty much sure its not sending the logs,

i did like the gui and simplicity, hopes it does work,

i will update.

Thanks.But how can you download from that website?Shit pops out...

Mr. Tycoon - February 1, 2012, 4:59 pm

You gotta fill out a survey. Pick one and fill it out then it will unlock and give you your dl. guys if you get stuck on the surveys just either do your real details or just make them seem legit

RisingWolf - February 1, 2012, 6:36 pm

So im pretty damn new to this. Any chance someone could help me out with some of the terms? like cure, melt downloader force steam and mutex to be specific. Thanks in advance

Mr. Tycoon - February 1, 2012, 6:53 pm

Cure - Cures your system if you've tested it on yourself. Just use the recommended options and google define the others.

Mcelite - February 2, 2012, 1:57 pm

Evo....Spirit from Zeta ring any bells?

Anyways nice, will download.

RisingWolf - February 2, 2012, 3:00 pm

Ahh tyvm. should have thought of that sooner. Ill have to try it out soon. As an aside the usb spreading, does that happen automatically? or does the program need to be run? I have had the original syslogger for over a year now and i see you have added new features however the original syslogger came virus free, no false positives, no virus, no trojan, no keylogger, no backdoor absolutely nothing. So why does this have a virus ? ? ? ?

I say no more. Before you say newbie i have been around every hack website there is and i know my stuff.

So if you can tell me why this one has that would be great. ?

I downloaded the tool, but when my anti-virus detected it as a virus I deleted the whole stuff. I trust in EVO because he's a legit dude, it was just strange, 'cuz I used to have the Unknown Logger Public and my anti-virus didn't pick up that's builder as a virus. (the server is an other theme, I understand why is that false positive, but the builder why in this case?) So why is it other in this case?

Anyway I do not blame you EVO, just curious, so how is it?

Ah, and Supermorph. Don't worry, if people see that you're HQ they won't be mad about your post count or such.

niian - May 8, 2012, 1:38 pm

Also, when testing my mail, it tells me my email account is wrong. o.o

Peanut Butter Jelly Time - May 9, 2012, 7:15 am

Thanks Evo I know the original syslogger was created by you and boy it is the best keylogger I have ever used me and my son used the other version but it stopped working for us we have been searching everywhere for a new one but every and I mean every other keylogger just doesn't compete with syslogger but I was kind of disappointed when I got the virus hit and for all the other members I do trust EVO 100% but the original was clean and this isn't, IM not new to this game I know about false positives, I already lost a laptop threw them and just wanted to only use clean tools so I was disappointed that's all. Evo I do trust you 100% I have had tons of slaves because of your keylogger, sign ins, software keys, emails even premium online games and software its the best, so please for me try and drop the hit and make it clean please, oh and staff I use no virus thanks and tick the box at the bottom of there page before scanning, virustotal is a noob error never ever use it noobs, I have this signature in a lot of forums telling noobs to use no virus thanks and I tell them why. Evo I will download it now I only wanted to ask why now I know, can I also ask does the new keylogger send you logs permanently if not detected or does it stop at a limited number ? Thank you so much and I love the new sections and your work.

thanks for the update. btw what does native stub option do?

CyberTerrorist - June 25, 2012, 6:00 pm

VERY FUCKING NICE, appreciate the refud, you are the bombb digity!

justas0077 - June 26, 2012, 2:41 am

hello, this keylogger dont have blinder ? very need it :)

The Godly Booter - June 26, 2012, 7:32 am

Can someone pm me on how to use this please im so confused thanks

asd43 - June 26, 2012, 7:32 am

very very very good :) I'm testing it!

But I didn't understand how the upgrade works O.o

Critical_Hax - June 26, 2012, 8:07 am

assembly changer needs to be updated I think

I get an error with some kind of res.exe :/

TheLegend90 - June 26, 2012, 2:00 pm

Something is going wrong. It works fine until I try and change the icon or the title of it then it stops working? Any ideas?

Olympia - June 26, 2012, 2:25 pm

Looks good, thanks mate...will use this!

tacos - June 26, 2012, 4:56 pm

Thank you very much sir!

You are very kind to release this awesome logger for free!!!

ikarloz - June 27, 2012, 5:56 am

Isn't FUD anymore D; Please Update it -

ostacro2 - June 27, 2012, 7:11 am

also detected by Kaspersky :(
sadly

Ischyros - June 27, 2012, 11:01 am

Tested it on myself, failed to work/execute. Wasnt a .net error either. Just thought you ought to know.

Thank you for the logger bro, i will use 2 logger in same time , DeadLine's keylogger and this for screen :)

tomaatjes - July 2, 2012, 12:43 pm

When i set it up. It stops working. Can you make a guide on setting this up=

TheLegend90 - July 2, 2012, 12:48 pm

Nice improvement EVO. Only problem now is that if you change the icon the server doesn't work. It says something like forum1 index is out the array or something like that.

Piracy - July 2, 2012, 12:52 pm

It didn't execute and then my AVG picked it up. I think the AVG is supposed to pick up programs with malicious potential but why did it not execute ?

mate i have this error, can you take a look pls?

ee the end of this message for details on invoking just-in-time (JIT) debugging instead of this dialog box.

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />  
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

the only weird thing that i've noticed so far with this is that when he sends the logs you get like 3 mails with the exact same info.. and sometimes even tho you see the active window app name ...it

will cut like sentences...

[x] Steam Forcer

And in some cases for some games it doesnt correctly get the input :|

The stealers just make it amazing because its free!

KingSpycrab - October 1, 2012, 7:52 pm

Ah yes! This is amazing! Fuck GUI, its got GUI thats just fine, plus your not looking for sexiness when your designing a keylogger. This will be perfect for anyone who doesnt know that many programing languages.

nicedog - October 3, 2012, 10:01 am

dude this shit has trojan? or my Norton is saying that.

boss12 - October 3, 2012, 10:22 am

nice one :)

@nicedog

just disable norton, it's not a trojan :D

are you supposed to check all the boxes before clicking build?

Sandurz - November 7, 2012, 1:16 pm

So far this is the only public keylogger I had difficulty whaling, very clever method bro ;)

On another note, it doesn't do test mails correctly. I used the correct info but no dice, didn't work, where others would.

Well, run an AV lol or locate the dropped file and hit it with Eraser

(Dec 31, 2012 08:00 AM)PurpleVegeta Wrote: [\[CITE\]](#) Is it normal to scan a keylogger program and find a ton of viruses on it? I scanned it with www.virustotal.com

Yes. Almost every AV has a different definition of 1 virus. A keylogger is a virus. And please do not scan with virustotal... It's a quick way to lose your license for crypters and other tools around here. Since Virustotal distributes samples of submitted files to AVs for analysis.

Make sure: If these don't help then switch to a new Logger.

You create a fresh email, I'd say GMAIL.

Make sure your system doesn't block any of the outgoing or incoming ports/ips

Make sure all your details are correct.

Woah. FUD? That's really nice. I'll try it out.

faw323 - March 31, 2013, 5:49 pm

Just made a server with your keylogger sir, it is detected chrome when downloading and has a detection ratio of 32/46 on VirusTotal.

Have a crypter by any chance?

Heufd - March 31, 2013, 5:54 pm

Syslogger is a very nice Keylogger, simple aswell.

Had a few nice hacks with it.

But the Syslogger isn't FUD at all.

PM me for any questions.

Kopfdusch - March 31, 2013, 6:50 pm

is the download working for you guys?

Edit: Now working

Olao99 - March 31, 2013, 8:24 pm

MaleficentPanda - April 2, 2013, 9:45 am

Thanks but it's not FUD..

<http://elementscanner.com/?RE=15d60b2c43a8820d59f72ecffd289f66>

And the icon changer doesn't work.

rubbaduckiii - April 2, 2013, 8:36 pm

Not FUD, and building it isn't working for me!

foxtrot777 - April 2, 2013, 10:14 pm

Hey i cant get it to work, the test e-mail to my Gmail works, but when i use it on my slaves to my DarkComet to get their logs, because DC keylogger isn't the best, i dont get any e-mail and i have waited to time i put. help please.

Heufd - April 2, 2013, 11:18 pm

1- Fill you Gmail in right above, then do a Test Mail, that is recommended.

2- Indicate on the left ALL the features.

3- Click on 'Build Server', then you save it where you like to save it and call it like you want to.

4- Now your priority is to let your victim download (and open) your server :

Go to <http://www.zippyshare.com> and upload there your file, or another file sharing site. But you can't use all file sharing sites for your server, for example Mediafire will block infected files.

After you uploaded it, you'll get a link like:

"<http://www17.zippyshare.com/v/75013714/file.html>"

Now you say to your classmate something like: "Have you already downloaded this free game?"
Just ANYTHING, and then give him the download link so he'll download your Server.

You could also use 'Error Link'. Write something like: "Game can't be played in Software mode." So, your mate will not suspect you.

Here is a video with the tutorial I found on YouTube :

- <http://www.youtube.com/watch?v=oFdGbIKu5Sk>

Kind regards.

(Apr 3, 2013 03:18 AM)Willcox Wrote: [\[CITE\]](#) Great tool, have you got a crypter by any chance?
It is a Keylogger, a very good one.
PM me if you want any provements!

A keylogger is a type of surveillance software (considered to be either software or spyware) that has the capability to record every keystroke you make to a log file, usually encrypted. A keylogger recorder can record instant messages, e-mail, and any information you type at any time using your keyboard. The log file created by the keylogger can then be sent to a specified receiver. Some keylogger programs will also record any e-mail addresses you use and Web site URLs you visit.

This one has also Stealerlogs included, which give you your victims usernames and passwords.

Use a Crypter or a Java Drive-By.

Yes they have to download it.
That is normal, some Anti-Viruses block the Syslogger.
I recommend a Crypter or a Java Drive-By.

New to this kind of thing, is there a way that I can get the stub file?

Reason being: I wanted to infect my old PCs, but it said .NET is needed, and I understand that it is a .NET keylogger, and Assembly changer isn't working, and AVG is detecting it as a virus, but I managed to find a crypter, and I need the stubfile to finish it along. So i did everything in that image including the email thing, saved it to my desktop then took that .exe scanned it with my Cube Crypter, it was 24/34. I then made a new stub in DC (i know its working i ran it in sandbox) and i binded the keylogger to the new stub. Went into DC right click on my slave i wanted to use it on and updated from file. I was spamming f5 as it finished sending and i saw it open. So i know it worked. I have yet to get an email of any log's. Im not sure if its like hour intervals or what. But it said 15 minutes so should I have gotten an email by now? Also, what is the FTP thing? Do i even mess with that?

I downloaded this and i set it up like this <http://prntscr.com/11ibwa> and i did the email thing. check it. said it was working and everything. I even got the little test email. So i did everything in that image including the email thing, saved it to my desktop then took that .exe scanned it with my Cube Crypter, it was 24/34. I then made a new stub in DC (i know its working i ran it in sandbox) and i binded the keylogger to the new stub. Went into DC right click on my slave i wanted to use it on and updated from file. I was spamming f5 as it finished sending and i saw it open. So i know it worked. I have yet to get an email of any log's. Im not sure if its like hour intervals or what. But it said 15 minutes so should I have gotten an email by now? Also, what is the FTP thing? Do i even mess with that?

Not trying to spam just in extreme help!

Brandyn - May 23, 2013, 3:29 am

This works but It doesnt at the same time. I can infect someone but it just wont get all the information it seems like. Like for instance im trying to keylog someone signing into fiesta online, and int he keylogg you wont even know they pulled fiesta up. When on my RAT imw atching them do it. Same with the keylogger on my rat, seems like it doesnt pick up the username or password when they are signing into things.

I'm assuming that it will auto run the logger when it is plugged into any PC by the USB. Though my question on that, would be does the server need to be on the USB by itself? Or can you have other files to make it less suspicious?

Also has anyone tested this out with any popular paid Crypters?

This was the best program I've seen so far. I've hacked a person and stole Skype information out of the person. Thanks so much!

ImChivalrous - July 30, 2013, 11:20 pm

This will prove to my friends's agreement that, if I can somehow "hack" their computer, I can have their nudes. Even better than that, if I am successful, they'll be nude ;) wish me luck.

Maslosek - July 31, 2013, 5:02 am

Its possible to steal everything or only this

Stealers

[x] Google Chrome (latest version)

[x] Mozilla Firefox (latest version)

[x] Opera (version 10)

[x] Windows Live Messenger (latest version)

benjiix - July 31, 2013, 11:52 am

Great Keylogger but the keylogger is FUD or not?

SEster - July 31, 2013, 12:21 pm

No stealer for internet explorer? :(

accounterrorbot - August 3, 2013, 5:38 pm

(Jul 31, 2013 12:21 PM)SEster Wrote: [CITE](#) No stealer for internet explorer? :(Actually, if you check "Stealers". It will steal everything from Cookies. Pretty much, it steals through everything. There shouldn't be nothing to worry about.

Oh, by the way. This Syslogger should update lots of things. It would be very easy too.

SkyRider2 - August 3, 2013, 5:40 pm

Nice release man, good to see something like this that's given to the community.

MIDOS75 - August 4, 2013, 3:31 am

Hello everyone, i'm new on the forum. i can't see the link can anybody give it to me. THANKS

My and EVO new keylogger have a look guys : <https://hackforums.net/showthread.php?tid=3574328>

mike_of_ss - August 4, 2013, 10:41 pm

ive asked in the guide thread for using this program as well, but does this program have an option to bind to another, or do i have to actually try to get whoever to open the logger itself?

Guyon Dantonio - August 4, 2013, 11:48 pm

Thank you for this share, works great! I have a question about the cure function. What do I need to type in to cure my computer? I created a virus with a name like 'X - XX XX.exe'. What should I type in? Thanks in advance.

nick_wright_204 - August 5, 2013, 12:35 am

Lmfao email tester is crap dosent work you might want to fix this now i will not be using this.

brock122 - August 5, 2013, 11:45 am

My computer says that its a spy? why??

cwanyx9 - August 5, 2013, 5:08 pm

good logger :D tanx really :DD

i got it!

reallifedutch - August 5, 2013, 5:11 pm

Alright people are you sure this is a good one really intrested thats why

5h1t_warrior - August 5, 2013, 5:14 pm

email tester worked for me but i got 14 downloads and still not getting any logs...

Arabalroko1967 - August 6, 2013, 3:07 pm

How do i download this logger because it was not downloading

Tomstery1 - August 8, 2013, 3:28 pm

I've downloaded it and infected 1 person, I got a stealer logs of this persons google chrome passwords and that.. What else can I do? Is that it?

cMan- - August 8, 2013, 3:50 pm

Thanks a lot man. Great download. HQ

h2ck3r - August 9, 2013, 3:21 am

Great download:) Can anybody suggest best crypter and binder for this? Plus how to link to the icon changer.... Any help will be appreciated. thanks

S?vant - August 16, 2013, 5:26 am

Does this still work? I infected one person and I got an email titled "Stealer logs" and the email was blank. :\

TheGreatPhoenix - August 16, 2013, 2:36 pm

So far, this thing looks great!!! Thanks for the share!!!

Mesa - August 16, 2013, 3:26 pm

I need help I did this to my second computer to test it out and no Stealers Log popped up but when I did it to my self on my own computer stealers log popped up with all my emails and paawords

JW1337 - August 17, 2013, 4:39 am

not fud, avast picks it up as spyware so...

Matt Murdock - August 17, 2013, 10:28 am

Windows removes the file everytime i download and when I look in my Security history it says a TrojanSpy was detected. I dont know if that is the keylogger or an actual virus in the program. Reply?

Matt Murdock - August 17, 2013, 10:37 am

Everytime I download it says "Failed Virus Detected". It's really annoying.

17jarbear - August 17, 2013, 1:18 pm

Norton keeps picking it up as melware, Does this happen because it's a melware creating program?

broken gun - August 17, 2013, 7:07 pm

this is just a trial it works for 7 days than it goes off

L?renzo - August 18, 2013, 7:06 am

as anyone here test it and see if it works

dhanics - November 16, 2013, 2:59 am

I found a virus in this although it was detected on open?

aSoect - November 16, 2013, 3:52 am

I have a little problem, I want the logs to be uploaded via FTP but what should I write on the "URL" ?
I have a host from <http://www.drivehq.com> and I use Filezilla to connect to it so I wrote
"http://www.drivehq.com" on the URL space and my password and username from the host site to
password and username but when I test the FTP with a file it says :uploading failed. What I'm doing
wrong ?

Awesome keylogger, actually been using this on my friends

Hannibal Rising - November 17, 2013, 1:14 pm

Great and simple keylogger! Very good one for beginners!
I hacked around 12 people with it.

A07121994_pom - November 17, 2013, 11:23 pm

is this keylogger workin with aegis crypter

Ducdedroit - November 18, 2013, 2:37 am

This program is outdated :(
I advice you the marvelous emissary keylogger :)

neitht - November 18, 2013, 5:23 am

Outdated why?
I was just about tryng it.. O_o

dlmao - November 18, 2013, 11:50 pm

So if put my logger onto a flashdrive and put it on a buddies computer, is the flash drive poisoned
essentially? I did run the startup on my buddies computer so he is being logged but anyone who
puts the flashdrive inthere computer, will they be infected?

FrankieDeckard - November 19, 2013, 4:37 am

any guide how to work on this ?

ive tried to use it but its saying wrong e-mail and shiet's

What's a screen logger and a stealer

xAmnesiia - December 9, 2013, 1:07 pm

Its works good just that i get blank logs back and screenshots of their computer telling them to turn their AV on, but i still got 2 accounts :D

Keith Cozart - December 9, 2013, 3:29 pm

Guys this logger is MADDD old and moth likely does not work any longer. Sorry.

Poopkiller - December 10, 2013, 11:07 am

this looks mad old but wondering if it still works...?

Keith Cozart - December 10, 2013, 3:04 pm

The lad i checked which was MONTHS ago... it did not. Sorry!

am808 - December 10, 2013, 3:42 pm

Sir - December 31, 2013, 12:11 am

What's with the rep on you saying that the syslogger is backdoored and that you were stealing money?

youdealinwitavillain - December 31, 2013, 1:18 pm

it's working for me,not sure what these guys up top are saying it wont work because it's old. in fact,this is the only logger so far out of all the ones i've tried on this site that does work. nice job to the guy that made it

Stelio - January 1, 2014, 2:49 pm

For those of you saying it doesn't work anymore.

Edit: It still works but it isn't FUD

SkatSkap - January 2, 2014, 12:05 pm

under dd - January 2, 2014, 9:48 pm

hey im all new at hacking could you perhaps make a tutorial? :)

Imnewhere123 - January 3, 2014, 11:14 pm

I have one question about this: I'm getting double reports. How do I stop this? And another thing; does this grab passwords to clients such as League of Legends or Steam or just simple things like anything in Chrome, Firefox, and IE?

SourPurp - January 4, 2014, 2:30 pm

when I try to open it i get this error "windows cannot access the specified device, path, or file. you may not have the appropriate permissions to access the item." any1 know whats wrong?

KryptonThunder - January 4, 2014, 6:28 pm

:P

I never comes on this thread before but if the tool is still working it is an amazing release !!! The FUD status is not a problem at all , crypters will do their job , but that totally free logger seemes really good :)

Thanks to share your work with us and for free , really appreciated

Best regards

Roggers97 - February 17, 2014, 5:17 am

It 's totally FUD? And usually how long it remains FUD?

JohnLennon - February 18, 2014, 6:48 am

Is this still being updated or is this dead. Because the thread is very much alive. Atleast release a paid version or something.

sebastien34800 - February 18, 2014, 9:02 am

Hello, you have a crypter for Syslogger ? thank's

Try to use EOF on your crypter then try crypting again! ?

Mutex make it so it will only run once per machine

Infect notify will likely email you to say you have a victim

Recommended uses the recommended settings

Im not 100% on this but i think native stubs = no .net dependencies.

Im pretty sure it starts up with windows but i use startup in my crypter, not in the logger.

Hey. yh I'am a "noob". But what should I enter at the "SMTP"? My email adresse and pw? Because that doesn't work. And how can I keylogg a person with just use his IP?

Sry for my english btw xD

Thanks for the answers, if someone answer xD

QuZa - May 22, 2014, 1:28 pm

Going to try this out later, thanks!

You need to send the file you create to the people you want to infect, it has nothing to do with ip's lol.

Run it on sandboxie or virtual machine and see if it's clean or not. By the way most hacking tools are detected as 'false viruses'.

segdeh - June 29, 2014, 4:36 pm

Yes, It is safe. It's being detected as a false positive. Still though, download at your own risk.

test029 - July 2, 2014, 8:12 am

What a pity, download doesn't work. Any support please?

Server97 - July 2, 2014, 9:02 am

It's a false positive. You need to disable the option in privacy.

Just out of curiosity, does the "Stealer" option only try and steal once? As far as I'm concerned it doesn't delete the cookies, and if it does, when they re-enter password it's not sending stealers. (Tested on my PC, btw).

It's made in visual basic

Native stub means its compiled in a language native for windows where no third party program is

required

Not sure what that language might be however
maybe c++

I believe all loggers and stealers will get detected...not because they are infected but because they generate malware. don't know if this is infected or not...you'll have to turn off your antivirus to download and take your chances. BTW you need to turn off your antivirus when running the logger anyways so your stub doesn't get detected.

Thanks, man!

I know what a native stub is but what is confusing me is the point of offering it as an option.

(Jul 17, 2014 04:15 PM)cbugz Wrote: [\[CITE\]](#) BTW you need to turn off your antivirus when running the logger anyways so your stub doesnt get detected.

Can you elaborate on this please? It will be running along with the AV on the victims PC anyways so what's the point of shutting down the AV on your own PC?

(Jul 18, 2014 01:02 AM)mikewitt Wrote: [\[CITE\]](#) Thanks, man!

I know what a native stub is but what is confusing me is the point of offering it as an option.Well it would allow you to use it on more systems
to run this keylogger you require the .net framework
a c++ keylogger would make it so that your computer doesn't require a third party program like .net.
the library files would already be inside the window's OS

And dont shut down your AV but add your keylogger to the exception list on it

Protótype_ - August 31, 2014, 7:38 pm

Just downloaded and set it up. How long does it take to get the victims logs.

As in how long does it take for me to get emailed.

And what is force steam?

Also Is there Anything else i should know ?

Sempiternal14 - September 7, 2014, 12:41 pm

Do you guys realise that the first post is made in 2011 and therefore is not FUD anymore?
You will need to crypt the server.

Emailing works, not sure about FTP, maybe you did something wrong.

Simply™ - September 7, 2014, 12:44 pm

How detectable is it? From scale of 1-10

1= detects as harmless as a txt file

10= gives the government a reason to search your computer

?I???ry - September 7, 2014, 1:12 pm

Yeah this post is from 2011 guys lol. But I can verify that it works. I've had this for a while and it does work. It's not FUD viciously lol. But it works none the less.

jimspvp - September 11, 2014, 2:05 pm

Prep for the noob question but, do you have to have this open while people are being keylogged or does it send it automatically. Otherwise, looks great! :D

Lol. Ok? What if the application you're trying to inject into, isn't supported by Carbon. What if the application you're wanting to log doesn't connect to a server/internet. I doubt you could code anything in order to state how .NET is shitty. Quit bashing OP's thread.

carbon has inbuilt system wide injection that allows the keystroke of any unsupported application.

Because the UI on a free program matters right?

mannypetty123 - September 12, 2014, 3:51 pm

Not to be rude but I can conclude this probably is just a virus spreading attempt.

It is fully detected, and everyone has issues with the program running. The Cure does not work according to other users, neither does FTP or EMAIL settings.

That is probably because it is coded badly. Last time I checked the executable, it didn't seem harmful.

I can agree it was coded badly. Windows Defender removed it instantly and uploaded it to Microsoft for checkup lol

I have no need for an Anti-Virus. Malwarebytes is all I need. Ask the coder to recode it and add different stub.

Koffee - September 15, 2014, 10:34 pm

<https://gyazo.com/c0e6702a4f3dd5693ed0af353b121e76>

Syslogger has worked for me and made me 5.5M Richer on 07RS.

The only quirk is that I found something called, "PCGuard" that can help encrypt Syslogger and what not, but upon re-downloading it, i'm kind of sketched out because AVG was like "Nah bruh don't do it" and I was like "Aight I gotchu homie"

Proof : <https://gyazo.com/9548634af8fec4a6199da6c2c8ec200f>

Not sure if that's because of the Syslogger being a keylogger or because Syslogger is actually a keylogger that works and is being used on me. Nonetheless, I've decided not to re-create another system build and keeping content with my own. In advance, thanks again, I can't wait until I scrunge up enough money to buy an encrypter and get this shit encrypted.

when i go on the download page it says the the page contains 'Variant.Kazy.83584'

fugi94 - March 31, 2015, 10:01 am

does his work with mac, as the browser is safari

FuZe_x_Pred - April 1, 2015, 3:53 am

My antivirus picked it up as Cloud 9 and a Trojan .-.

Dr.Corel7 - April 1, 2015, 3:44 pm

Nice GUI, Simple and [Free] Thank you for the keylogger

But can we encrypt the email ?

toome - April 1, 2015, 6:43 pm

Thank you I will try it out, some other free loggers not working for me.

It so easy to use, anyway if it's not FUD just use crypter and it should to work perfectly I think, I dry to do it today.

darkwrath505 - April 2, 2015, 5:28 pm

Thanks for the share dude, might be using this.

toome - April 2, 2015, 11:54 pm

Thank you it's really easiest logger I ever seen.

it says bid is done and then it doesnt show me the file created ? why is that ?

r3za.al0n3 - April 6, 2015, 3:18 pm

very very nic im give and but worket this soft

Gurv1r - April 9, 2015, 11:27 am

Thanks, this helped solve my problem! Much appreciated.

livemanin - April 10, 2015, 11:46 am

hey, when i type in the E-mail adress *****@gmail.com and ect its coming an error, invalid e-mail username or password. but iknow i have written right.

Martarts - April 10, 2015, 10:23 pm

I can't update it. Someone should really start this project up again! It was good while it was new.

PrivateMember - April 11, 2015, 12:21 am

Very nice. It works well and the logs are nicely formed.

Any chance of encrypting the email info at a later date?

MAJOR - April 11, 2015, 6:17 am

what is mutex and what is native stub

Linyah - April 14, 2015, 11:08 am

Anyone knows whats happening? I receive the emails but the logs came in blank, like this
"[------Syslogger Builder-----]

[------]

Clipboard Logger Logs:"

HauntedPast - April 15, 2015, 3:31 am

Is this still FUD? If possible could someone post a scam ?

Anubis - April 15, 2015, 5:53 am

No, it's not FUD, and it never was FUD (I believe).

You can't expect a free keylogger to be FUD.

Besides, this one is REALLY old.

Spsq - April 15, 2015, 6:57 am

Is there any way to get it work without opening ports?

?L?m?rB?y?™ - April 16, 2015, 12:25 pm

Thanks you for your sharing man ;) i hope that is fud

JustZeus - April 20, 2015, 12:50 am

alexfrank2750 - April 27, 2015, 11:17 pm

Thank you so much for this

ItzZoraCxnt - April 28, 2015, 12:21 am

Can someone help me? Whenever i try and use the email and press the test button it says error?

damzRR - May 11, 2015, 12:12 pm

How can you make it FUD? Because i want to send it to a friend of mine to test it out but it doesn't let me send it through FB.

Also is there any way to change the file type to .jpeg or .exe?

sauceboss1287 - May 13, 2015, 5:52 pm

Very nice work what was it coded in

Snjall - May 14, 2015, 1:12 pm

I am testing keyloggers atm and now try this

Dream - May 14, 2015, 4:22 pm

I don't think this is still FUD :(

ialeidioma - May 18, 2015, 3:10 pm

Hi everyone this is my first post, so i downloaded it and I've found out how to set it up but when i test my gmail it gives me an error about wrong e-mail or password, I've checked carefully more than one time and everything is fine, and my connection is good. Any idea on what i can try/do ?

Well I found out by myself.

BalakKoBack - May 19, 2015, 12:46 pm

Any new update for this keylogger?

TomGredly - May 23, 2015, 2:40 am

I try it on Windows 8. This keylogger working perfect on this OS.

[x] Google Chrome (latest version)

[x] Mozilla Firefox (latest version)

[x] Opera (version 10)

[x] Windows Live Messenger (latest version)"

Moltivie - June 2, 2015, 3:25 am

That's not syslogger dude.

That's a malware, don't download it

MoneyMatters - June 5, 2015, 6:48 pm

Hey this looks like a good keylogger but I used the recommended settings with a working email and opened the newly built exe on another computer and it did not work. No error message like it should have done. Nothing. Any help would be greatly appreciated.

sharkboy6745 - June 7, 2015, 7:00 pm

This is amazing! I vouch. It has the force Steam option which forces steam to close/logout and when they log back in, you can see their details. The only thing i'm excited for, is encryption and possibly more spreaders. I had trouble with real-time scanning on McAfee because it deleted the client and the stub. lol other than that, it's amazing.

Avatamsa - June 22, 2015, 11:11 am

is there any guide to describe what does each option do ?

thanks btw for sharing

BeLeL - June 22, 2015, 11:26 am

thank you very much for sharing greetings

BeLeL - July 6, 2015, 12:48 pm

many grax to put the program in the tutorial leaneth me greetings

V.L.S. - July 7, 2015, 2:03 pm

Avira detects the file as a suspicious threat. TR/Spy.Gen

It is normal or should I download a different file?

SK1DZ3R0 - July 28, 2015, 12:38 am

Thank you for sharing! I'm aware for the old thread's date but still has to say this ,

Everytime I try to build server I get an "Unhandled exception has occurred in your application. If you click continue, the application will ignore this error and attempt to continue. If you click Quit, the

application will close immediately.

Conversion from string 'Error' to type 'Integer' is not valid." error.. and also this puts a detailed log with load of information about JIT debugging and Microsoft Visual Run-Time details..

So .. yah, it's not working for me..

DamienVC - July 30, 2015, 12:38 am

Since its free its useful for others. ?

rafoute59 - August 1, 2015, 10:12 am

I have a problem. Nothing work ? D:

OGNuggets - August 3, 2015, 5:55 am

looks like a great keylogger

im about to try it right now!

Abducted - August 8, 2015, 4:35 am

MickeyMouseClubhouse - August 8, 2015, 9:10 pm

Working, great share! Simple and working

frafri - August 9, 2015, 10:07 am

I downloaded but Unsure how to use

is there a quick tutorial somewhere ?

THanks !

I found the tutorial. My question is, I already executed the file but no logs yet.

is this a keylogger ?

Burnzy - August 9, 2015, 1:14 pm

is this thing still fully working? because its old as f

edit: i recived test email, everything seemed okay, but... when i executed this on one of my rat installs, a message popped saying sysloger: failure to send mail, LoL am so not using this.

SenseiScrub - August 9, 2015, 8:41 pm

My malware protection detected it, is this safe?

_triforce - August 10, 2015, 8:23 am

I tested it today with 3 different emails and with 1 ftp server, invalid user/pass all time.

It's still working?

str8snipe - August 10, 2015, 8:44 am

Its not recognizing my gmail ive tried many times whats the problem?

itzryzo - August 10, 2015, 6:27 pm

Download link is not working for me.

Nicholas Dru - August 11, 2015, 9:40 am

This is not FUD, please make the corection for future costumer?;)

Very nice and easy to use kL! Keep on good work.

If the computer runs the kL, and then it gets deleted, will it still start on start up and give me information from victim?

Thanks in advance. -Regards

Hi all,

This tools is very amazing

But several issues are remaining for me:

- I am unable to make work the Clipboard logger and the Stealer.

- I don't know how to make the server FUD.

Any help will be more than welcome.

Thanks and good luck to all
