How to decrypt passwords

When I open a thread for a crypter with a password for noob protection, I see a lot of comments saying; Can't decrypt;Please help me decrypt...etc. so I decided to make this thread.

Let's say that you open a thread, and you have to decrypt this password:

Code

JTI1MzQIMjUzMiUyNTlwJTI1MzQIMjU2NCUyNTlwJTI1MzclMjUzOSUyNTlwJTI1MzclMjUzOCUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzQIMjU2NCUyNTlwJTI1MzQIMjU2MSUyNTlwJTI1MzYIMjUzOCUyNTlwJTI1MzQIMjUzMiUyNTlwJTI1MzUIMjUzMyUyNTlwJTI1MzMIMjUzMiUyNTlwJTI1MzYIMjUzMiUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzUIMjUzNCUyNTlwJTI1MzclMjUzMSUyNTlwJTI1MzQIMjUzNiUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzQIMjU2NCUyNTlwJTI1MzMIMjUzNyUyNTlwJTI1MzQIMjUzNiUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzUIMjUzNCUyNTlwJTI1MzQIMjU2NSUyNTlwJTI1MzQIMjUzNiUyNTlwJTI1MzYIMjUzMyUyNTlwJTI1MzYIMjUzNyUyNTlwJTI1MzYIMjUzMyUyNTlwJTI1MzUIMjUzNCUyNTlwJTI1MzYIMjUzMyUyNTlwJTI1MzYIMjUzNyUyNTlwJTI1MzMIMjU2NCUyNTlwJTI1MzMIMjUzNSUyNTlwJTI1MzclMjUzNCUyNTlwJTI1MzYIMjUzNyUyNTlwJTI1MzMIMjUzNyUyNTlwJTI1MzYIMjU2NCUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzQIMjU2NCUyNTlwJTI1MzIIMjU2NiUyNTlwJTI1MzMIMjUzNSUyNTlwJTI1MzQIMjUzMyUyNTlwJTI1MzYIMjUzNCUyNTlwJTI1MzQIMjUzMiUyNTlwJTI1MzYIMjUzOCUyNTlwJTI1MzQIMjUzMiUyNTlwJTI1MzUIMjUzNCUyNTlwJTI1MzclMjUzMSUyNTlwJTI1MzclMjUzMiUyNTlwJTI1MzQIMjUzMiUyNTlwJTI1MzYIMjUzNyUyNTlwJTI1MzclMjU2MSUyNTlwJTI1MzYIMjUzNSUyNTlwJTI1MzYIMjUzMSUyNTlwJTI1MzUIMjUzNCUyNTlwJTI1MzMIMjUzNyUyNTlwJTI1MzclMjUzOCUyNTlwJTI1MzYIMjUzMSUyNTlwJTI1MzMIMjUzNyUyNTlwJTI1MzQIMjUzNyUyNTlwJTI1MzQIMjUzNw==

Below it you will probably see something like this:

Encrypted: Reverse>AER-256>GILA7>HEX>T-ASCII>BASE-64

This is the way the password is encrypted. In this case it starts with Reverse and ends with Base-64. This means that we have to start decrypting with Base-64 and end with Reverse. Basicly you do it from the end to the start.

OK, so first you need a website to decrypt it. The best one is [CRYPO](#)

When you are in crypto, you can do CTRL+F and enter BASE-64 (in this case)

[\[IMG\]http://img202.imageshack.us/img202/5056/45527775.png\[/IMG\]](#)

In the field you paste the code and click Decrypt.

[\[IMG\]http://img861.imageshack.us/img861/7696/63253981.jpg\[/IMG\]](#)

When you do that, the decrypted code will appear in the field. Copy it.

[\[IMG\]http://img863.imageshack.us/img863/3517/67297603.jpg\[/IMG\]](#)

Find T-ASCII Decoder and do the same with the new code.

[\[IMG\]http://img97.imageshack.us/img97/4069/25968898.jpg\[/IMG\]](#)

OK, now we need HEX. Oh wait... there is no HEX in crypto, so what now ??? What we do is enter [THIS](#) website. You paste the code in the field under HEX, and click decode. Then you get the decoded text from the field under "TEXT"

[IMG]<http://img8.imageshack.us/img8/2240/68832740.jpg>[/IMG]

OK, now you go back to [CRYPO](#) , and do the same with GILA7 and AER-256 , as you did in the beginning with BASE-64 . If you do it correctly, you should get this Code sseccus

Now you only need to find REVERSER, which is in the down right corner of CRYPO, open it, paste the code and click reverse, you get

SUCCESS

This was my first thread, I hope you like it. Happy Hacking!

Glaedr - June 17, 2011, 6:19 am

Great tutorial. Bookmarked it now. Thanks for this:)

Phil Dunphy - June 17, 2011, 6:24 am

Wow great tutorial, Now I know how to decrypt passwords ^^ Thanks dude!

Anonymous.7654 - June 17, 2011, 6:26 am

Very nice and detailed Tutorial,thank you.

Quiet. - June 17, 2011, 6:27 am

It's sad that this tutorial is actually needed for all the retards of HF who don't know what the fuck their doing.

But this is needed.

No problem man, enjoy ?

Dreamboy - February 25, 2012, 3:15 am

Bump!

Hope to help someone new here :)

Ultimatum™ - February 25, 2012, 3:17 pm

Excellent thread but Crypto wouldn't solve all the problems

Blowfish and Rot-93 for example or TripleDES is not on Crypto :S
