Thread: [\[VB.Net\] BlackCap - Code Imagifyer \[Source\] \[Stop kiddies by turning code into image\]](#)

BlackCap - June 16, 2011, 11:44 pm

So yeah, for those of you who didn't saw [my last thread](#), this is a compleatly open source application which turns code into images.

The idea behind the application is to stop those kids which are just cypypasting our code and reposting it as they'r own. Who knows, maybe this will stop them? :)

So, after request from Anatamize i made the user able to change the colors of the output picture:
[img]http://img717.imageshack.us/img717/9676/screenshootw.png[/img]

As shown in the picture, there is a loot of colors you can change at the top of the panel to the right. There's also a textbox with a code containing all your colors which you can copy, save or share. If you past a code in the textbox, you'll have to press enter b4 it changes the colors!

Would be nice if you changed the colors and posted the color code in this thread? ^^

I also added a loot of highlight words (sub, function, if..).

[img]http://img18.imageshack.us/img18/3284/lulzv.png[/img]

And i also added color to the strings and the comments ^^

Please give some creds to dextrey for the orginal idea, or else he wont sleep for days..

Hope you enjoy this :D

Aeonhack Archivist - June 16, 2011, 11:46 pm

Very nice release. I made a similar program to actually generate images of my code.

Hell Guardian - June 16, 2011, 11:47 pm

This is very nice indeed

Good job

BlackCap - June 16, 2011, 11:53 pm

I have dyslexia. I misread the title and didn't see "Stop kiddies by turning code into image."

Well good source anyways. I like your ability to use custom colors, where as mine, was all written by me so no option for customization.

stefsot - June 16, 2011, 11:59 pm

I do like it. Very nice and unique.

I'd like the image to have full borders, not just left and top.
Very nice work.

BlackCap - June 17, 2011, 12:22 am

[img]http://img810.imageshack.us/img810/2339/screenshot2ie.png[/img]

Well, thank you sir ?

D4rKn3s5 - June 17, 2011, 12:26 am

This is pretty cool. Great idea also, sadly I'm sure some losers will still c/p just with the c/p part.

ahmedkulumu - June 17, 2011, 2:49 am

Very nice, thank you. I like it.

DragQueen - June 17, 2011, 4:27 am

tnks i will save it ... in my project directory

JackD - June 17, 2011, 5:02 am

i like, good work. thanks

Smooth Criminal - June 17, 2011, 5:17 am

Nice try, but using some simple OCR you can still easily get the code in text format...

Conch - June 17, 2011, 5:29 am

I really like this!

I will use this a lot, and definitely give credits :]

Thank you!

Ph03.nix - June 17, 2011, 5:36 am

Wow, another awesome tool!

Big Thanks for the share!

c0ffee - June 18, 2011, 6:35 am

Very nice program!

(Jun 17, 2011 05:17 AM)Smooth Criminal Wrote: [\[CITE\]](#) Nice try, but using some simple OCR you can still easily get the code in text format...

It's to prevent skiddies from using your code. Kiddies don't know 'bout OCR.

KingCobraXD - June 18, 2011, 6:38 am

I think what would be great is to add some sort of watermark directly in the middle. That way, those skids can't even use OCR to reverse it. =)

Grey Mind - June 18, 2011, 6:38 am

This is amazing, will help lots of ppl thanks!

BlackCap - June 18, 2011, 6:51 am

I have acctually tryed not to use any watermarks because I dont want peapols to give me creds everytime they add source to they'r post?

Would a watermark prevent OCR?

Can i have a link to a ORC program for testing purpose?

KingCobraXD - June 18, 2011, 7:01 am

Lol. You can make a custom watermark or something.

www.free-ocr.com

We are sorry, for some reason we could not run any OCR on your processed image.

If you want to help us to improve the quality of this service, you can send us (see contact) the image and we will try to improve our program.

amoebainfectiontechnique - June 18, 2011, 8:57 am

nothing's gonna stop the rippers rippin. they'll just type the code and put their name on it.

good project anyway.

BlackCap - June 18, 2011, 9:23 am

good project anyway.

At least it will slow them down a loot and decrase the interval of the posting ^^

no1me - June 18, 2011, 1:19 pm

very nice src and idea tnx

Jaafar - June 18, 2011, 1:25 pm

Thanks for the source and very good job.

INFA?OUS - June 18, 2011, 1:28 pm

Great share. Thanks :)

-xLeGiiT

sunbinyuan - June 22, 2011, 4:16 pm

Any ideas? 102 errors..

The most common one:Code Error 9 Name 'C' is not declared. C:\Users\Sun\Desktop\Imagifyer\Imagifyer\Imagifyer.vb 33 28 Imagifyer

.kom - June 22, 2011, 4:28 pm

Great application, This will definitely help a lot of people

Dark Ness - June 22, 2011, 5:32 pm

Nice share. Could be used to make a coding guide or something.

Vysse - June 22, 2011, 8:06 pm

This is another great release from you. I cannot wait to see more of your work.

aSmoo - July 5, 2011, 4:26 pm

This very very very nice :)

Keep it up,you have some great ideas ;)

DeathandTaxes - July 5, 2011, 8:24 pm

I'd like to see something like this done for C#. Maybe I'll try to port your source code over? Seems like an idea and a project for me to do this week. I was learning Java but for some reason it bores the hell out of me, so I'm just going to perfect my C#/VB.NET skills. This seems like a nice test for me to try :) If I can get it I'll upload it and send you the link.

And about the custom watermark, it would be nice to figure out how to take the txtWaterMark.value.text and turn it into a watermark. That way a user can place their own name in it.

Edit: Well, you can still paste your C# code in there it just won't change the colors of the different portions. Also, comment your code damnit!!!! XD

StarZ - July 5, 2011, 9:38 pm

You probably could counter this using OCR by the way...

noober1001 - July 5, 2011, 11:33 pm

I have also coded an app like this.

But you have much customization option to look image great.

It will help me definitely. Thanks for your source.

Banks? - July 5, 2011, 11:35 pm

(Jul 5, 2011 09:38 PM)StarZ Wrote: [\[CITE\]](#) You probably could counter this using OCR by the way... This is what happens when you try and use OCR.

Mr Kewl - July 6, 2011, 2:00 am

This looks great.

^ ^ > _>

DeathandTaxes - July 6, 2011, 10:07 am

What is the output image name? The one with the code? I think I have the watermark down :)

BlackCap - July 7, 2011, 9:04 pm

Why the hell did i get +10% in warning level for this thread!? :(

krazedkat - July 7, 2011, 9:22 pm

Okay, making a program to convert the image's text into ascii ;), I find it to be a fun little challenge.

Addition - July 7, 2011, 10:57 pm

Thanks for this! Really helps me :]

Bossmous - July 8, 2011, 12:01 am

I tried this program and jizzed on it 6 times now i cant find my shirt

The Unknown - July 8, 2011, 2:31 am

well it really looks good you know, the way to design your picture as well is well coded as I see, nice job, keep up the good work OP

Diabolic - July 8, 2011, 3:07 am

This looks amazing and could help out many users, thanks a lot for posting/making this!
