Thread: [Hack Website with IIS Exploit. \[Tutorial\]](#)

vikhyat1996 - June 17, 2011, 12:31 am

In IIS Exploit we can upload the Defaced page on the Vulnerable Server without any Login. It is most Easiest way to Hack any site.

STEP 1:

Click on Start button and open "RUN".

[img]http://1.bp.blogspot.com/-Jp6FInbqAzg/Td8-yvFWs8I/AAAAAAAAAFY/2qPyMhG9o20/s320/IIS+exploit1.JPG[/img]

STEP 2:

Now Type this in RUN

%WINDIR%\EXPLORER.EXE

,::{20D04FE0-3AEA1069A2D8-08002B30309D}\\::{BDEADF00-C265-11d0BCED-00A0C90AB50F}

[img]http://4.bp.blogspot.com/-dS2v9js2a28/Td8_XBMSxYI/AAAAAAAAAFc/a2E4VcPGCfQ/s320/IIS+exploit2.JPG[/img]

Now A Folder named "Web Folders" will open.

STEP 3:

Now "Right-Click" in the folder and Goto "New" and then "Web Folder".

[img]http://1.bp.blogspot.com/-gyPSmn5gvg4/Td9AO_jEchI/AAAAAAAAAFg/9q-h0bFCwvM/s1600/IIS+exploit3.JPG[/img]

STEP 4:

Now type the name of the Vulnerable site in this. e.g." <http://autogingdao.com/>" and click "Next".

[img]http://1.bp.blogspot.com/-taYjjQpjNrc/Td9E5vVcSxI/AAAAAAAAAFk/TcbYBp_Bo-g/s1600/IIS+exploit4.JPG[/img]

STEP 5:

Now Click on "Finish"

[img]http://4.bp.blogspot.com/-Xg8qiQYL0Z4/Td9FRZWPyNI/AAAAAAAAAFo/kZaFhzfOpdc/s1600/IIS+5.JPG[/img]

STEP 6:

Now the folder will appear. You can open it and put any deface page or anything.

[img]http://2.bp.blogspot.com/-c7yXoaE1mpE/Td9FtumNpDI/AAAAAAAAAFs/aPXTvLXpc_8/s1600/IS+exploit6.JPG[/img]

STEP 7:

I put text file in that folder. Named "securityalert.txt" (you can put a shell or HTML file also). If the file appear in the folder then the Hack is successful but if it don't then the site is not Vulnerable.

"In your case it will be " www.[sitename].com/[file name that you uploaded] "
?

Jones. - June 17, 2011, 1:02 am

Nice tutorial but is there a dork for finding IIS sites?

vikhyat1996 - June 17, 2011, 1:14 am

itsDroll - June 17, 2011, 1:22 am

this doesn't work at all...

when i do it all it does is open computer.

vikhyat1996 - June 17, 2011, 1:40 am

its works for me....

i don post without checking it

Mewtw? - June 17, 2011, 1:43 am

How can we know if a website is vulnerable ?

CoLeEe - June 17, 2011, 2:00 am

Spoiler ([Click to View](#))%WINDIR%\EXPLORER.EXE

,:::{20D04FE0-3AEA-1069-A2D8-08002B30309D}\:::{BDEADF00-C265-11d0-BCED-00A0C90AB50-F}

This Command it's not works for me.

vikhyat1996 - June 17, 2011, 11:32 am

it works for me,PM me ,i will show you through TV

NextGenHacking - June 17, 2011, 11:50 am

Command Doesnt work for me either. It just opens up my computer...

Another Method for Windows 7:

- 1- Start -> Computer
- 2- Right click and hit "Add a Network Location"
- 3- Direct to the website you want.

A Problem with this tutorial is that upon adding the sites details you need an admin User and Pass to confirm the folder creation.

Hope that was useful :D

Glimpse - June 17, 2011, 1:01 pm

It doesn't work for Windows 7 users.

Great Prosperity - June 17, 2011, 1:02 pm

What versions of IIS does this exploit involve?

How do you determine if the site is vulnerable?

vikhyat1996 - June 18, 2011, 2:37 am

thanks i tried it using windows XP. i didn't know that.
trying on my laptop

Toph Beifong - June 19, 2011, 3:57 am

looks like a very good tutorial, easy to follow with pic's :D, gonna try out in a bit.

Mario - June 19, 2011, 4:11 am

Its a good tutorial. I would like to know any dorks or how to know if it is a vulnerable site

Anonymous_Hacker - June 19, 2011, 4:39 am

Thank you , this thread is very interesting for somebody.

JamesBoom - June 19, 2011, 2:38 pm

Doesn't work, i have tried it with Windows 7, Windows 2003 & Windows VISTA all of them just bring me to Computer Help me please.

Razor4x 5_0 - June 19, 2011, 3:17 pm

For win vista/7 just click here --> <http://img851.imageshack.us/img851/889/iis1.png>

exe_cute02 - June 19, 2011, 4:29 pm

Thanks maybe i should try this.

i only shared it only man

Phenix - July 19, 2011, 1:55 am

This doesn't work, it asks me for a username and password using the windows 7 map network drive method

Phenix - July 19, 2011, 1:55 am
