text:

Code Sup hackforums, Mx. here.

A quick video tutorial to upload a shell like a image, (any php shell) or script whatever.

To do this you need:

a php shell .php

and livehttpheaders for firefox just google it.

Simply ive taken over this website before, to show you that its possible to upload ur php even when it only takes .gif or .jpg, and it wont load ur .php.jpg shell.

Find a path where to upload a image or a document on any hacked website.

Kies een JPEG-bestand of GIF-bestand om te uploaden.

Translated:

Choose a JPEG or Gif to upload.

well lets try to upload a plain shell.php

Je probeert een bestand te uploaden wat geen JPEG of GIF is

Well i got denied,

your trying to upload a image what aint a jpeg or a gif.

so its time to try again but now with livehttp headers logging the info

as you see i put in a c100.php.jpeg at first, then we will log the info with livehttpheaders and change it into something better :).

Upload van c100.php.jpeg [0.22Mb] gelukt!

It succeeded, but yet we got jackshit on this, as it wont load our shell.

so lets make it a .php just :).

Content-Disposition: form-data; name="file"; filename="c100.php.jpeg"\r\n

Content-Type: image/jpeg\r\n

Note the content type being image/jpeg and the filename c100.php.jpeg
just delete .jpeg now :)

Upload van c100.php [0.22Mb] gelukt!

it succeeded :)

Software: Apache/2.2.17 (Unix) DAV/2 mod_ssl/2.2.17 OpenSSL/1.0.0d FrontPage/5.0.2.2635.
PHP/5.2.13

uname -a: Linux ralf 2.6.18-194.32.1.el5xen #1 SMP Wed Jan 5 19:32:33 EST 2011 i686

126

There we go , quick and easy :).

Greetings,

Mx.

I hope you enjoy and learn something, cheers :).

Mx.

Posting a text tutorial and then giving a YouTube link is more useful than just giving a YouTube link...

Mx. - June 17, 2011, 9:05 am

so yeah basicly? you dont really make to much sense lol.

specizripn - June 22, 2011, 4:19 am

So you know how to upload a shell but you don't know how to embed a youtube video in your thread?
