Thread: [\[2/5\] Nukedit "terms" Cross-Site Scripting](#)

Omniscient - May 2, 2007, 12:12 am

Nexus has reported a vulnerability in Nukedit, which can be exploited by malicious people to conduct cross-site scripting attacks.

Be sure to check if your system is missing security updates or have insecure applications installed:
http://secunia.com/software_inspector/

Feature Overview - The Secunia Software Inspector:

- Detects insecure versions of applications installed

- Verifies that all Microsoft patches are applied

- Assists you in updating your system and applications

- Runs through your browser. No installation or download is required.

Sure it has been patched. Why? Check when the thread has been posted, you will understand.

Just because a thread about an exploit was posted a very long time ago does not mean that exploit is patched. I know of many old old exploits that have been reported and still not patched. There is also the chance of that exploit being modified to create an even deadlier one.
