Thread: [Im writing up a virus ebook... a whitehat ebook.. something like that..](#)

Condoms - June 22, 2011, 1:38 am

Would people buy it if i was to release? Talks about viruses, malware, etc.. and how to remove it using different tools that are out there.. Stuff HF doesnt hardly use..

A small passage from book:

Quote:But wait...

How can a person like me get infected?

Getting infected by a virus is not a hard task to do. You can get a virus by doing something, and sometimes you dont even need to do anything at all.

Most viruses are usually spread through infected files that a user opens on your computer. -.exe -.com -.bat

These 3 are the most common extensions of viruses that people open on a daily basis. However, modern viruses are not only take root where: Word (*. doc, *. xls), music (*. mp3), flash (*. swf), movies (*. avi), pictures (*. ipg, *. jpeg , *. gif, *. png, *. bmp), IE (*. htm, *. html, *. vbs, *. js, *. htt). You can get viruses in these too. People bind or otherwise combine a virus into files like this. This is why you should be cautious all the time of what your downloading from and what sites your getting the downloads from.

BFF HA Y AN BOI - June 22, 2011, 1:42 am

I program viruses so I don't think I'll need it.

Heisenberg Walter White - June 22, 2011, 1:42 am

I mean why not- Could be amazing . ?!

I would suggest you include solutions to problems like what to do when registry/cmd/msconfig is disabled and also what not to do. You can take guidelines for what not to do from this thread:-

Most people here only buy skiddy malware coded by a 13 year old in their spare time or an ebook written by a sexually frustrated kid that promises them \$5000 a minute, but whatever floats your boat, OP. Oh, and because I like you, if you need help with writing it up PM me and I'll give you my 4.5/5 eBook on how to write an eBook for free.
