I subscribed to this thread because I have read some of it but unfortunately I do not have the time to finish reading it at this point, since I have been up for a while and my brain is starting to turn into mush. But I must say that this thread is an excellent starter for those people who do not want to do the research (unfortunately not me because I am reading everything and anything, for those newbie hackers, and well as those hackers that just want to read up on something.

I give you mad props because this is an excellent read and one that I think many people should read.
