Thread: [CommView only shows the System process?](#)

Kolgera - June 26, 2011, 5:07 pm

Well I've used commview before, and it worked perfectly fine...and now I bought a booter and when I try to use commview, the process tab only shows System, it doesn't Show skype.exe and stuff like it used to..how am I supposed to tell which IP is which, and how do I fix it?

All help appreciated ;/

I don't think I added it last time, and I don't see why that would make it display the process name.

Did you already fix this? If so how?! I also have this problem.

OMGoneOMG - July 11, 2012, 7:39 am

How to fix this?

Tell me please.

Thanks in advance

Did you ever fix this? Still having this problem. Hmu if you know how to fix it

Swifthider - July 21, 2013, 9:33 pm

I think you have to update it, then reboot your computer, if it still doesn't work, try contacting the people!

Regards,
Swifthider
