Thread: [? Free VPN ? VPNod | Ubuntu/Linux Setup](#)

Anonymous.7654 - June 28, 2011, 4:38 pm

How to apply to a free private beta account?

Send an email to promotion@vpnod.com with subject vpnod

and you will get an instant reply with access credentials to VPNod service.

Ubuntu/Linux Setup Instructions

1.First off, we need to install the required software to utilize the VPN service. You can use the command line or GUI package manager to do this.

To install from command line, open up the "Terminal" application, found in "Applications -> Accesories".

[img]http://www.vpnod.com/site_media/static/images/linux/terminal.png[/img]

Then write the command: `sudo apt-get install pptp-linux` at the prompt.

[img]http://www.vpnod.com/site_media/static/images/linux/terminal2.png[/img]

To install using the GUI, start "Synaptic Package Manager" found under "System -> Administration".

[img]http://www.vpnod.com/site_media/static/images/linux/synaptic-start.png[/img]

Using the search box at the topK type pptp-linux to search for the package.

[img]http://www.vpnod.com/site_media/static/images/linux/synaptic-search.png[/img]

Once found, click on the check box beside it, then click Apply to execute the command.

[img]http://www.vpnod.com/site_media/static/images/linux/synaptic-install.png[/img]

2.Click on the network icon, at the top right, and choose "VPN Connections -> Configure VPN"

[img]http://www.vpnod.com/site_media/static/images/linux/configure-vpn.png[/img]

3.Create a new VPN profile by clicking on the Add button.

[img]http://www.vpnod.com/site_media/static/images/linux/vpn-add.png[/img]

4.Be sure to choose "Point-to-Point Tunneling Protocol (PPTP)" from the list then click Create.

[img]http://www.vpnod.com/site_media/static/images/linux/create-vpn.png[/img]

5.You can choose any name you like, we recommend "VPN On Demand", then fill the information

as follows:

Gateway: vpn.vpnod.com

User name: usually the email you used to register with

Password: your own password

then click on Advanced to finish the setup.

[img]http://www.vpnod.com/site_media/static/images/linux/vpn-info.png[/img]

6. In the "PPTP Advanced Options" window, make sure to check "Use Point-to-Point encryption (MPPE)" as shown below, then click OK until all windows are closed and you're done.

[img]http://www.vpnod.com/site_media/static/images/linux/vpn-advanced.png[/img]

7. You'll only need to perform the steps 1 to 6 for first use of VPNOD.com service. Using this service will be easier later on.

Click on the Network icons from the top bar, as shown in the screen shot and choose "VPN Connections -> VPN On Demand". Ofcourse, VPN On Demand is the name you chose in step 5.

[img]http://www.vpnod.com/site_media/static/images/linux/start-vpnod.png[/img]

8. Finally, wait for a few seconds while the connection is established. The next time you need to connect to the service, you'll only need to perform the 7'th step.

Wow! that service is awesome! thanks for contributing to the *nix community!

Eminent - June 28, 2011, 9:55 pm

But does it work with HF? Omni blacklisted VPNs since he is coming out with his own in July.

Fuh-Kyu - June 28, 2011, 10:01 pm

Nice share!

You can basically use any PPTP VPN quite easily, and you can also setup OpenVPN as well.

There's a link to setting up UltraVPN [OpenVPN] in *NIX --> [here](#).

I don't know about VPN's being blacklisted, but I can get here through a shell >> proxy >> proxy >> HF.

Anonymous.7654 - June 29, 2011, 1:45 am

Thank guys for replies my thread.

aw0l - June 29, 2011, 5:24 pm

Using a VPN this way, does everything you do in terminal also get tunneled through the vpn?

edit:

nvm, I found out it does :P

ki4jgt - June 29, 2011, 8:05 pm

Thanks for this :-) If I could give rep, I would give you 1 a day for the next 50 days.

IMOK - June 30, 2011, 8:59 am

Nie(my sea key doesn't work) but when I go to select the connection type the PPTP doesn't show up? (yes I installed)

Me working perfect,maybe try restart system.

4fun - July 2, 2011, 2:50 am

can somebody or anybody will help me? it will not connect in vpnod the error is VPN connection is failed, im finish installing pptp-linux and daemon-vpn, finish registering an account and finish restarting my PC...

NOTE: im using 3g dial-up only..

Dillyy - July 7, 2011, 3:29 pm

I'm using ubuntu 11.04 and i followed this tutorial exactly. But when i finished the VPN doesn't show up under VPN Connections. I'm gonna try to restart my system. Maybe that'll work.

Entitled - July 7, 2011, 6:25 pm

Just asking are you guys logging passwords used whilst using your vpn?

overdoze - July 14, 2011, 9:11 am

Thanks for this, works fine for me in Ubuntu 11.04 :)

Shot Caller - July 14, 2011, 9:23 am

works with hf...

using it now...

Anonymous.7654 - July 16, 2011, 5:26 am

Do you guys keep logs? Because if we use your vpn and log into something you are able to steal our information.

Anonymous.7654 - July 16, 2011, 8:08 am

I dont know many information about this VPN and Logs.

-eViL.cReatiOn.. - December 19, 2011, 6:44 pm

Thanks I needed it. Just hope they don't keep logs. Still works on HF :)

ruthschris - January 22, 2012, 9:25 pm

Very good tutorial. easy to follow and most importantly it actually works. Great Job sir.

Jbruh - January 22, 2012, 9:26 pm

I am going to try this out thanks for the share bro

bolthacker - January 25, 2012, 1:54 am

I'll try this

thanks for sharing

--wrote this to make this msg long-- ;)

matt_ - January 26, 2012, 12:56 am

I've read somewhere about VPNoD keeping logs. I will see if I can find the article and post the link.

However its a great service if you want to access offshore content such as netflix, hulu etc.
