Thread: [LAN SPREADER !](#)

charizard5959 - June 29, 2011, 10:28 am

Ok let me start by telling you my situation, My target is a LAN running about 60 computers(I do have access to 1 pc inside the 60) I'm running dark comet 3.2 with completely FUD server everything perfect on my side but I want in- in a big way I'm familiar with LAN spread however my experience with such as "London Worm" but had no luck on execution. So what I'm asking is for anyones help add my msn charizard5959@hotmail.com. Here's some details

Target: LAN network 60 pc's

Method of Entry: 1 of the pc's is compromised I am able to connect my server to 1 pc out of the 60.

Method of Attack: ? LAN spreader ? Worm ? Help

Goal: simply just to be connected to LAN pcs via my rat.

its depends on the local network you are connected to

i suppose this local network use mikrotick to give output ip ?

or

using main router to spread ip?

moor info then i will guide you the right setting for your rat
