Thread: [\[TUT\] How to create a PDF Creator](#)

Solowestside - June 29, 2011, 4:10 pm

This is my tutorial on how to create a basic PDF creator, I will supply a download link for the Fonts, and the Class module.

Things you'll need:

1 Menu Item (Name it Create)

1 Textbox

[Video: <http://www.youtube.com/watch?v=pY5gh8Sk-G4>]

I forgot to add the Class Module thats why i got the error. Didnt wanna remake the video
Files Needed:

<http://www.mediafire.com/?v6ani0p5a4p54dk>

Add the Class Module to your project or it wont work correctly. Also after compiling put your Application in the same directory as /Fonts.

If you dont have vb6 and wanna check it out, download full .exe project here.

Thanks for the Video Tutorial about VB.

Solowestside - June 29, 2011, 4:45 pm

no problem, glad you liked it

Thanks for the Tut, it helped a n00b like me. This is my first actual post too. :D

Coleak - June 29, 2011, 6:33 pm

Cool i guess, but it would be a whole lot more helpfull for members here if it werent in vb6.

So you think a tutorial in Vb10 would be more suiting?

Evader - June 29, 2011, 8:59 pm

Very nice tutorial man. This is very nice. I never seen this type of project before.

Solowestside - June 29, 2011, 9:32 pm

no problem man, Glad you liked it

Ill be making one for VB10 soon
