Thread: [\[EASY\]Hack Windows XP Password \[EASY\]](#)

Stenography - July 2, 2011, 2:56 am

There is a far better way to get into Windows XP.

It is easy and it does not reset the password.

Hack into a computer running Windows XP without changing the password and find out all and any passwords on the machine (including admin accounts).

You do not need access to any accounts to do this.

Of course, do not do this on anyone elses computer without proper authorization.

Steps to Hack into a Windows XP Computer without changing password:

1. Get physical access to the machine. Remember that it must have a CD or DVD drive.
2. Download DreamPackPL from Official website or from #.
3. Unzip the downloaded dreampackpl_iso.zip and you'll get dreampackpl.ISO.
4. Use any burning program that can burn ISO images.
5. After you have the disk, boot from the CD or DVD drive. You will see Windows 2000 Setup and it will load some files.
6. Press "R" to install DreamPackPL. 7. Press "C" to install DreamPackPL by using the recovery console.
8. Select the Windows installation that is currently on the computer (Normally is "1" if you only have one Windows installed)
9. Backup your original sfcfiles.dll by typing: "ren C:\Windows\System32\sfcfiles.dll sfcfiles.ild" (without quotes)
10. Copy the hacked file from CD to system32 folder. Type: "copy D:\i386\pinball.ex_ C:\Windows\System32\sfcfiles.dll" (without quotes and assuming your CD drive is D:)
11. Type "exit", take out disk and reboot.
12. In the password field, type "dreamon" (without quotes) and DreamPack menu will appear.
13. Click the top graphic on the DreamPack menu and you will get a menu popup. How to Hack Into a Windows XP Computer Without Changing Password – [www.crack\\$hack.ws](http://www.crack$hack.ws)
14. Go to commands and enable the options and enable the god command. How to Hack Into a Windows XP Computer Without Changing Password – [www.crack\\$hack.ws](http://www.crack$hack.ws)
15. Type "god" in the password field to get in Windows. You can also go to Passwords and select "Logon with wrong password and hash". This option allows you to login with ANY password.

Your welcome, mate.

more comments ??

oktalWind - July 2, 2011, 3:05 am

Very nice, will have to install an XP on my test pc just to try this.

Anyway, is there something like this for Windows 7?

Download Hirren Boot CD and burn it on CD.

boot from the disk and choose mini-xp (something like that)

and than go to the menu and you will see "passwords" tab.

you will see reset password w7/vista (again, something like that)

and you will reset your pass.
