Please reply and comment ;)

You all are free to use its source, but don't be some lame guy and give credits, like I do, Gogoli, as I used a little bit of his source. (Well, actually The whole thing how it recognizes keystrokes. Thanks Gogoli!)

Also I have a request:

As NoVirusThanks only scans with 5 AV-s, then could someone scan the server somewhere that scans with more and doesn't distribute the sample too?

Basic keylogger, but good job making this ;)

The Unknown - July 3, 2011, 4:42 pm

is it FUD or what ? If it is FUD then you did a good job... else still good but not enough OP...

jkymmel - July 3, 2011, 4:47 pm

It records your (or someone elses) keystrokes and then sends them to your e-mail.

And yeah, It's not FUD, but you can try making it.
