Thread: [List of all the Techniques you can use as when hacking.](#)

Exception - July 5, 2011, 2:48 am

Here the List goes :--/-- As for Reference.

- * CSRF Cache Poisoning
- Code Injection Command Injection
- Comment Injection Attack Cross Frame Scripting
- Cross Site History Manipulation (XSHM) Cross Site Tracing
- Cross-Site Request Forgery (CSRF) Cross-User Defacement
- Cross-site Scripting (XSS) Cryptanalysis
- Custom Special Character Injection Page Hijacking
- Parameter Delimiter Path Manipulation
- XPATH Injection XSRF
- Web Parameter Tampering Windows ::DATA alternate data stream
- Binary planting Blind SQL Injection
- Blind XPath Injection Brute force attack
- Buffer overflow attack Account lockout attack
- Argument Injection or Modification Asymmetric resource consumption (amplification)
- Denial of Service Direct Dynamic Code Evaluation ('Eval Injection')
- Direct Static Code Injection Double Encoding
- Forced browsing Format string attack
- Full Path Disclosure HTTP Request Smuggling
- HTTP Response Splitting Man-in-the-browser attack
- Man-in-the-middle attack Mobile code: invoking untrusted mobile code
- Mobile code: non-final public field Mobile code: object hijack
- Network Eavesdropping One-Click Attack
- Overflow Binary Resource File Traffic flood
- Trojan Horse Regular expression Denial of Service - ReDoS
- Relative Path Traversal Repudiation Attack
- Resource Injection
- * Path Traversal

Thanks, Know them all and become a true hacker.

Exception A.K.A Coded

Lord_Sinister - July 5, 2011, 3:14 am

I think your a little confused. It is a nice list, but those aren't "hacks", their popular exploitation methods. "Real Hackers", as you put it in your closing foot note, create their own exploits on the fly. They don't stick to a 20 line list of exploits.

It is a nice list though, you can't deny that. Cheers.

g0han - July 5, 2011, 3:15 am

Talk about copying a site and not giving credits; <http://owasp.com/index.php/Category:Attack>

Lord_Sinister - July 5, 2011, 3:18 am

Yeah, theirs just so many things wrong with this thread. Like I said, it is a nice list, but you are aware

that your missing like 200+ possible methods for infiltrating via different services, etc., right?
Actually your list barely scratches the surface. In fact, your list is the surface, and it has yet to be scratched.

papachearsET - May 15, 2025, 5:01 pm

I recommend using the relaysms. io for inbox SMS delivery ??.

That's not all??

0vts1d3r - June 3, 2025, 9:21 am

The list provided is all DIY with open source resources or are involve also paid

services/subscriptions ??

heiyen - June 5, 2025, 5:33 pm

??,????????,????????,????????

HerrWinston - June 9, 2025, 1:07 pm

its a good list, but like others said there is so much more to beeing a true hacker lol. I will take a look into all these things tho, thanks ?
