Thread: [Programming, Networking, malware collection books \(Reference list\)](#)

Developer - July 5, 2011, 2:09 pm

There are a ton of books on different subjects. You can use this thread as a reference to a book if you want to learn something.

This list is my personal collection of books that I own.

Lesson #1: If you want to learn put the work in and don't be lazy.

I'll include a number next to each title according to how I think you should read them based on difficulty level. I organized them based on #1-#31.

#1 being the easiest

#31 being the hardest levels. (the last 2 were irrelevant and actually not that hard, but I put them as last because it's not used much for hacking on the internet.)

Sorry for not including picture for all of them, the limit is 15 pictures. ?

Good websites to use:

<http://www.w3schools.com/>

<http://www.exploit-db.com/>

<http://www.thehackernews.com/>

<http://www.w3fools.com/>

<http://1337day.com/>

W3schools for beginner level.

W3fools.com for more advanced levels.

I am only posting the titles. You can download them off these websites:

Side notes: The current best book out to learn Delphi. Delphi is most notable known for creating malware related with sockets, such as with RATs. Not for beginners.

http://www.amazon.com/Mastering-Delphi-7-Marco-Cant%C3%B9/dp/078214201X/ref=sr_1_1?s=books&ie=UTF8&qid=1314953030&sr=1-1

<http://www.amazon.com/Wireshark-Network-Analysis-Official-Certified/dp/1893939995>

I couldn't find the ebook on Google ? Just look for it on Google since I didn't spend very much time looking for it.

<http://www.amazon.com/Sams-Teach-Yourself-ASP-NET-Days/dp/0672321688>

#18 - NMAP Networking Scanning

Side notes: Every single hacker should know how to use Nmap, if you have never handled Nmap before then you should never call yourself a hacker. Perfect for testing and learning about pentesting the hacker way.

<http://www.amazon.com/Nmap-Network-Scanning-Official-Discovery/dp/0979958717>

[img]<http://www.security-database.com/toolswatch/IMG/jpg/NMAP-NETWORK-SCANNING-R129802.jpg>[/img]

<http://www.amazon.com/Nmap-Cookbook-Fat-free-Network-Scanning/dp/1449902529>

#26 - The rookit Arsenal Escape Evasion Corners

Side notes: Rookits, what else could I possible say? Very serious form of malware and not for beginners. Knowledge required will be probably advanced C, C++, Python, and sometimes even perl to transition into understanding this book.

<http://www.amazon.com/Rootkit-Arsenal-Escape-Evasion-Corners/dp/1598220616>

#7 - Python Essential Reference

Side notes: Very nice book/easy to follow with lots of pictures. Good for beginners.

<http://www.amazon.com/Starting-Out-Visual-Basic-2008/dp/0321531353>

#1 - Creating Web pages with HTML

Side notes: You can NOT learn begin even calling yourself an internet user without even understanding the basis behind all websites on the internet. HTML will introduce you to web development and it will allow your transition into more advanced languages at an easier pace.

Newer Edition: Head First HTML with CSS & XHTML

http://www.amazon.com/Head-First-HTML-CSS-XHTML/dp/059610197X/ref=sr_1_1?s=books&ie=UTF8&qid=1309895388&sr=1-1

[img]http://covers.oreilly.com/images/9780596101978/lrg.jpg[/img]

#9 - Problem Solving C++ The object of Programming

Side notes: Very good and a very good price for its contents. It is expected that you have C or Python or Javascript type of coding knowledge by the time you get to this book.

Newer Edition:

<http://www.amazon.com/Problem-Solving-Object-Programming-Fifth/dp/0321268652>

#14 - Hacking Exposed Network Security & Solutions 6th

<http://www.amazon.com/Hacking-Exposed-Network-Security-Solutions/dp/0071613749>

#11 - A practical Guide to Linux Commands, Editors, and Shell Programming

Side notes: The perfect book if you ever want to stop being a skid and become a real hacker to practice programming scripts in Perl, manage your own security, code your own exploits in C or C++, and much more.

Highly recommend this book but get ready to spend lots of time transitioning into a new operating system.

#28 - ActionScript 3.0 for Flash and Flex

Side notes: Although Actionscript 3.0 is not the latest version of Actionscript, I personally prefer 3.0 since I have worked with it before but I believe that there is a 4.0 version out now. This book is perfect for working with Flash based websites or working with Flash based applications. I listed this high simply because ActionScript is not used much for hacking since ActionScript is normally used with other web developing languages like PHP/Javascript/HTML along as well.

<http://www.amazon.com/Foundation-ActionScript-Flash-Flex-Foundations/dp/1430219181>

#4 - Learn PHP & MySQL

Side notes: No single hacker can himself/herself a hacker without knowing the language behind 60% of all websites on the internet. PHP for scripting and SQL for maintaining databases. If you know how everything is coded together then it is much easier to find vulnerabilities.

http://www.amazon.com/Learning-MySQL-Step---Step-Database-Driven/dp/0596514018/ref=sr_1_7?ie=UTF8&qid=1309897229&sr=8-7

I won't be surprised if no one notices this thread. Instead of relying on tutorials for basic knowledge, people should focus on books for more indept information.

Basics. - July 11, 2011, 12:03 pm

Wow, thank you for this collection on EBooks. I was getting tired of just having "The Hackers HandBook". I'm sure this will help quite a lot in what a real hacker does.

Morse Code - July 11, 2011, 1:01 pm

This is an amazing contribution. Your threads are always HQ and informative. Thanks for this.

Eminent - July 11, 2011, 5:53 pm

Malware Analyst's cookbook. Why didn't you put a # on that?

Some are available for free on the internet, but some you might have to buy.

I own all of them as hard copies.

Developer - September 2, 2011, 1:45 am

Just an addition on the w3schools link:

<http://www.w3fools.com/>

w3schools is usefull for the basics but when you move onto more advanced stuff watch out because the information on W3schools isn't 100% accurate, a great starting point yes, but just check out w3fools.com to see what I mean.

Don't get me wrong w3schools is great, but it's the more advanced stuff

Im a nube i just know how to program basic stuff in python but is it still possible to hack some ones computer and like delete every thing basically do what ever you want because i heard on a thread that that was impossible. And you did a good job but can you explain what to learn in order it doesn't have to be in complete detail just brief. And i dont mean the book titles i mean like the topic because you cant get all of these book's online. Sorry I know its probably a hassle.

wrongspeed - September 30, 2011, 8:14 am

Thanks for the effort. Some of these books are going for almost nothing on ebay. I'm hoping to get some as free e-books and print them off at work. And take a folder. And use their holepunch. :)

I didn't really put the details on all of the books since there's so many of them but I will try to write a bit of more details on which subjects to focus on.

And yes, some of these books are very cheap online.

can use this thread as a reference to a book if you want to learn something.

This list is my personal collection of books that I own.

Lesson #1: If you want to learn put the work in and don't be lazy.

I'll include a number next to each title according to how I think you should read them based on difficulty level. I organized them based on #1-#31.

#1 being the easiest

#31 being the hardest levels. (the last 2 were irrelevant and actually not that hard, but I put them as last because it's not used much for hacking on the internet.)

Sorry for not including picture for all of them, the limit is 15 pictures. ?

Good websites to use:

W3schools for beginner level.

W3fools.com for more advanced levels.

I am only posting the titles. You can download them off these websites:

I listed this high simply because ActionScript is not used much for hacking since ActionScript is normally used with other web developing languages like PHP/Javascript/HTML along as well.
