I like the scan watch I'll see how long it goes :P

Does each customer get. A unique stub? Or is everyone on the same one each update like andromeda crypter was.

And are stub updates unlimited when we get detected?

And what's going to happen to this when Kryptonite comes out?

The stub is built into the client.

It has USG so, every stub made is unique.

Every crypt (using the same kinky server) is more then 99% different.

And yes when I see the USG won't do much I'll completely re-FUD it.

Also, Kryptonite and this one might become brothers of somesort and sell together

Obviously if he showed a picture of the bot needing .NET 4.0 then your crypter is making it need .NET 4.0.

```
Code providerOptions.Add("CompilerVersion", "v2.0");  
Just a tip. ;)

Don't try to feel smarter, I fixed that yesterday. If he add updated the shit he would have got the problem solved.

Yes before the builder required .netframework2 then I changed to 4 and I forgot about specifying the CodeDOMs version.

Then I ask again, why take the position if you have real life problems? Why even be online for support if you can't do anything because you have problems in real life?

Pluto - July 14, 2011, 3:08 pm

Because when I took the position I didn't know I would have these situations. And the reason I'm online is because I have my own personal reasons.

Using Dark Comet 3.3

Other than that it looks really good

Anyway should I wait for the update or is it mainly the GUI that is getting updated ?

Kill?Muvz - July 15, 2011, 6:48 am

The update just has more options for a longer FUD time.

No need to update.

Their customer support was FANTASTIC though, KillaMuvz (I think he coded Cryptex) was in contact with me trying to get the issue sorted while baked was away, and when baked got back he handled it professionally too.

Hopefully my PP problem will clear up in a few days and i can get down to using Cryptex

You'll have to build the server on DC 3.2 or 3.1.

3.3 is completely fucked up.

It has come to my attention that some costumers are having problems crypting. While others crypt perfectly fine. Some also say it is not FUD. Yet I have FUD results with simple settings. I'll take a look at where the problems are.

I heard blackshades startup has some issues with crypters. If I don't use the startup option on BS, can I just use the startup option on the crypter so I can have the server on startup for my victims? Also, which is better? To have both startup on, just BS, or just the crypter?

I am a Cybergate private customer.

-This crypter works with the latest versions of Cybergate?

-The updates are automatic or is necessary to request a new update ever my server is no longer FUD?

I've never tested with cybergate 1.11. Only 1.07.

LR and PP.

Yes it does bypass UAC, and firewalls. Though you'll have to either choose AppData or Temp. Auto-Updates.

I can't be sure on how long the fud will last. It should last longer then the others.

Just tested with BS. The new update of BS, I don't have a problem crypting with the crypters start-up 0.0

They are simple runPE's , improved. And used in a special way.

Here are some questions:

- 1- does it support UNICODE?
 - 2- is it compatible with CG,BS rat, BS http, SU, and Xpart?
 - 3- do u think if i use your crypter with alot of care it will be FUD for along time like three months or more?

Unable to authenticate as you do not have permission to run there.

Nop, no unicode, yet.

Yes. Don't know about Xpart though.

Three months is alot. But reFUDs take less then 1 day. The max I got was 1 and a half months. It should, if it doesn't let me know.

Sorry mate, tried every RunPE + Injection but still not working for me either. I get different results from the last version though. On some RunPE's the commandprompt opens and remains open as a process called "ntvdm". Sometimes cmd just flashes open like before. And on other RunPE's it opens with the message "program too big for memory". My server is only 653kb and uses a max of 3Mb RAM. Still haven't been able to use this after nearly a week :(

Tested this on my 32 bit Win7 and I still seem to get a CMD prompt, it doesn't go non responsive, but my RAT doesn't install either (and I know it works, because I tried it without crypting it and it installed.)

I've tested a few of the runPE's, the sixth one is saying 'program too big to fit in memory', in the command prompt that appears.

webworxs - July 22, 2011, 3:48 pm

Having a display issue with it. The crypter is cut off to the right and bottom, so it's unusable because a lot of the controls are hidden. Running Win7 64bit

Kill?Muvz - July 22, 2011, 6:55 pm

For some reason this doesn't work when crypting my server for my http bot (vertexnet). Theres no cmd, it just doesn't work at all. Works fine for my cybergate (on 32 bit)

I Pmed you both a while ago, Baked and Killa.

I'd like some help in regards to the setting to use (best) to get a good BS RAT Crypted.

Im hoping to hear from you soon.

Hopefully you can take a pic and add it to the thread so others can learn from it too.

I believe it was coded in C++. It just doesn't seem to want to work, lol. The original loader I know works, so it's gotta be with the crypter.

V Runtime - Runtime crypter is crypter that is FUD when you execute your crypted file. Runtime crypter use RunPe module, which inject your Virus with some process from TaskMangr and make it fully un-visible from TaskManager process list.

Yeah, I can't get anything to work. My Cybergate worked before they updated something, now .net support doesn't work now. I still believe that this is the best crypter, but if it cannot be fixed in a fair amount of time, I believe a refund should be in order no matter what you say with your "no refunds", because as it stands, the crypter is broken, and you know that. I hope someone is working on fixing the problem asap, at this point I don't think it's being impatient as it hasn't exactly worked properly since I've gotten it.

Guys, they're working as fast as they can to get this fixed, no need to get all angry about it. All programs go through some trial and error period. Give KillaMuvz the one week he requested to get this fixed and up and running and you won't regret it. Raging won't make it work anymore than it does already.

Well, they shouldn't even have it for sale if they know it isn't working to the level they advertise it as. I know it's a good crypter, but that's why people are raging. Because they are spending their own money on something and they expect it to work as it is advertised - and it isn't.

I agree with this, although I do not agree with sales being open while the product does not work. I can see why everybody is so butthurt, so far it's money down the drain. But hopefully it's fixed soon. Give KillaMuvz a week to fix it and then you can moan.

RATS Crew (went inactive, got kicked, etc.). I can't wait to re-apply for the Crew! O_O.

I have a question for Baked though: What about that onw month, will we get a time extension since nothing is working at the moment?

Riddick - July 25, 2011, 1:47 am

I don't know if this helps, nor do I know if it's already been posted, but sometimes I get these errors. They're pretty random, but usually happen if I enable .NET Support.

The crypter isn't working at the moment mate, it was working with cybergate before the update but since then i haven't got it working with anything. You will have to wait until the next update. Hopfully the time lost on your subscription will be reimbursed.

lun471k - July 25, 2011, 3:44 am

I hope so, otherwise it'd be called stealing.

Everybody who bought it has been waiting, just let the coders take a shot on it.]

They'll fix it sometime.

In a week tops.

I bought this myself btw

Cryptex automatically updates upon being executed. If there's no update then it won't do anything other than open normally.

For everyone asking for settings, just use RAT Startup.

It originally worked but somehow it got broken.
If you don't wanna buy it, Then don't.
If you did, Then wait like us.

Stop complaining.

And the license won't start counting until it's fully fixed.
So no money is wasted.

Think of it as buying something and it's being mailed to you,
And it's about a 2 week wait. :S

I deleted all licenses because like there is 18 chargebacks on my Paypal.

So instead of going through all, I'm going to delete all licenses and verify payment information.

Exactly what I just said, I'll phone them when their offices open.

Or tomorrow, my friend wants me to go out partying tonight and I have to get some sleep.

I WILL WAIT !

but i send u a paysafecard code its not paypal ;)

hmm i will wait and when after the update nothing works then u give me my paysafecard codes back ok ?

for you

PAYSAFECARD ! I have paid with paysafecard dude :P
but ok when you say he will update it i will wait again -.-
thanks for info bro :P

Raidan - August 5, 2011, 2:18 pm

Damn been waiting a long time i know this crypter is gonna be beast when it works again
its just we have to wait to long soon im going to get bored of ratting cause i havent done anything
with them recently

eXero - August 5, 2011, 5:53 pm

I am going to get this when I get the money.

told you it was under investigation, he lied to you all, you won't be getting your money back. He'll just
keep saying the same thing for the next 6 months until you forget about it.
Baked, you can report people for sales thrashing like this.

The owner of it deleted all of our lisenses and hasn't refunded us yet.
We waited for almost 2 weeks now.

Calling PayPal tomorrow.

muffel2000 - August 6, 2011, 2:51 am

i have my license :D
but crypter dont works -.-
i hope KilaMuvz has FUN xD
but else i hope he cpme faster online....
but guys whe have to wait what other we can not do !
or they guys for them is it enough....
a little tipp: you can make a scam thread
WHEN ITS VERY IMPORTANT !
i must wait to so guys he moving, please patient and be qiet...
Baked say all what he must say!also read all and have fun guys :P
i am search in this time for a Public Crypter :D

Gr33nDemon - August 6, 2011, 4:38 pm

guys, what with this cryper? it's not working right now?

Baked - August 6, 2011, 6:35 pm

To all that bought.

[Please read this.](#)

muffel2000 - August 20, 2011, 11:50 pm

ehm lol ?!
whats now ?
ok its over :/
money lost
no crypter

DAMN!

If this was copy paste, we'd have the update released already.

Banks? - August 22, 2011, 6:37 pm

I heard from a birdy, that the birdy initially coded this for you. ?

Banksy coded Xtreme Crypter Baked.

dont know why you say he copy & pasted when your the copy & paster .

Copy paste copy copy paste

Copy paste copy copy paste

Grow up cunningham. You have no idea wether or not this crypter is copy paste.

Baked - August 22, 2011, 7:03 pm

Funny thing is, this crypter was coded by KillaMuvz, who coded "NEO Crypter" as well, he sold the source to Positive and panDa.

He's away right now, but V2 is going to be amazing.

Cunningham is just jello, Cryptex is more popular than Xtreme will ever be.

Kryptonite is going to be my killer though, C++/ASM w/ Persistence and Polymorphic Builds.

If KillaMuvz is a birdy, then yes a birdy did initially code this.

Closing this until v2 is ready.
