Thread: [How to setup DarkComet RAT v3.3](#)

Specter™ - July 7, 2011, 7:33 pm

Hello users of HackForums, This is my first tutorial! So I hope you find this useful!

Step 1.) go to [darkcomet-rat.com](#) and download DarkComet v3.3

Step 2.) Extract the files (I prefer WinRAR)

Step 3.) Open up the client.exe, You will have to accept the Terms of Service!

Now your screen should look like this:

[img]<http://min.us/mcXF2Q>[/img]

Now when you have the client running click where it says listen, Now you can use the port it gives you and it will forward it for you, or you can use the port you forwarded! Then click listen.

Now to see if you the port you chose or selected is forwarded.

To do this go to [canyouseeme.org](#)

Now it should say Success, if not I can help you!

Then what you're gonna do is go to edit server and choose the first option.

Your screen should look like this.

[img]<http://min.us/mcX1QTE>[/img]

Now click Generate a couple times, this is located by the Process Mutex.

Now go to Network Settings, and put your no-ip info! but leave the localhost IP so you can test it your self! Also for the port number you can use 1604 if you did at the beginning or you can use your port that you've forwarded!

[img]<http://min.us/mdcTQ2K>[/img]

Now heres the Module Startup, I don't really use this but you can enable it if you wan't to.

Install Message, you can put whatever you want if you're not using a crypter.

Module Shield you can customize that but if you're using a crypter uncheck the Active FWB.

Key Logger- You may use that just fill out all the FTP information!

Host File- I'm not really sure, but just add the localhost IP!

Choose Icon- You can make your own Icon or use the default icons.

Plugins- Don't use!

File Binder- You can bind files, Best way to infect someone in my opinion!

Build Module- Build the server!

Now if you did it right it should look like this!

If you have any questions or need any help please don't hesitate to ask me I will help you until your issue is resolved!

Images don't load.

Typical guide with less details that have been posted many times.

Good job, regardless.

+mK - July 7, 2011, 8:56 pm

^ It gets less and less detailed as they are ripped, don't know? Sadface.jpg

Yeah man... I'm going to have to agree with that. If you're ripping them, they get lazy to rip the whole thing. Maybe I should make a HQ guide D: But then, that would just be repeating >_>
