You would be much better off using the WhatIsMyIP automation, since it is faster and more reliable.

He meant, it is much more stable if you're using this method to retrieve your IP address.

Btw, you don't really need to call this thread a 'tutorial', since all you need is a source code, I am sure people would figure out how to implement it.

?

Pretty simplistic, however glad to see another tutorial, better then a stupid over asked help thread.
