Thread: [Silent BitCoin GPU Miner](#)

JuryBen - July 10, 2011, 11:45 am

Price is \$10 per Bin.

I take LR and PP.

If you pay by PP you will need TEAMVIEWER so I can make sure your account is yours.

Official Reviewers get a bin free.

Private Message me for more information.

By the way this is ~330 MH/S on a 6950. It doesn't require .NET.

So Far working on 5XXX ATI cards and up.

Note:

I have only tested this on Windows 7 x64 - HD 6950 - using OpenCL and mining with DeepBit.net
I know for a fact, victims with ATI cards will need the ATI drivers installed.

Bin size is ~5MB.

File runs on start.

Request:

Also been requested a CPU miner if no GPU. I can't add this without coding lots more. I suggest just to bind with Silent Bitcoin, a free CPU miner. Keep in mind, CPU mining is using since it averages about 30 MH/s so unless you have a massive botnet it's worthless when it would take ~300 bots to average 1 PC with an ATI HD6990.

Big Vouch for JuryBen.

I bought a copy and it works like a charm. The only bad thing is that it doesn't mine CPU. Other than that, A++.

Yes and that's why it's 10\$. It's the best on the market and my method is very lulz (find another silent miner that can get's above 100 HM/s). None the less, I wasn't planning on selling this but I saw this thread: <https://hackforums.net/showthread.php?tid=1409180&highlight=bitcoin+miner> and people want it.

Trust me I admit when I rip, unlike everyone else. I suppose next time I won't admit to it if people are going to break my balls over this.
