Thread: [\[MAC\]Great ScreenSnapr Alternative](#)

Dr. J Rustler - July 10, 2011, 9:18 pm

Early in March I transferred from a PC on Windows 7 to a MacBook Pro. I was use to screensnapr and hated not having it on my macbook..Instead of telling you a big story i'll just link you to the program and tell you what it does.

<http://puush.me/>

What this basically does it when you take a screenshot using either Command+Shift+3
o

Command+Shift+4

it will instantly upload your screenshot to the internet and copy your link to the screenshot. Here's an example <https://puu.sh/3eXc>

It's a very cool, helpful, and easy to use program.

If you're an avid Mac user make sure to check out OSX Heads by clicking the userbar in my signature!

I use TinyGrab and Cloud App. They are more widely known and I love the service.

Enter Shikari - July 11, 2011, 12:17 pm

Psh, I just use the regular screen shot service and Cloud App. That's how I take all of the screenshots I post here.

yasyf - July 27, 2011, 2:13 am

Cloud App is the way to go for sure

Poppins - July 27, 2011, 12:09 pm

Just use CL.LY. It's the best I've found. I have a premium account so I can use a custom domain as well.

John. - July 28, 2011, 9:50 am

cloudApp best of the kind :).
