Thread: [? ? ? How To Hack Steam Accounts \[Detailed\] ? ? ?](#)

Wheelz - July 13, 2011, 7:27 pm

Hey HF, today I would like to share with you my favorite method for cracking steam accounts, it took a while to write all this up so please leave a comment on how well you think I did on this thread or any feedback about this method, thanks.

"Steam Multi-Tool™ By HellraZer and Redskull"

"Steam Multi-Tool" is one of the best steams crackers available. It doesn't requires proxies, once started it keeps on working. No need of any extra tool. Just a combo list with : delimiter and you are set to go. It checks Steam Guarded accounts too, so that you won't lose anything. It shows a steam guarded account as valid, which other cracker's doesn't check and that makes this tool above them.

[IMG]<http://img202.imageshack.us/img202/3488/proofjdp.png>[/IMG]

Note : It doesn't use username and password list. Just Combo List with : delimiter (Delimiter = User:Pass Style)

Only Account Checker Tab works(it's also the only one you need). The other tabs don't work because of all the steam updates.

How it works :

1. Open Steam Multi-Tool as administrator
2. Click On "Account Checker" Tab

[IMG]<http://img828.imageshack.us/img828/2032/sc2uy.png>[/IMG]

3. You can choose from single account or multiple accounts. If you are checking a specified account click on "Single account". If you are using a combolist list, click on "Multiple Accounts" and load it by clicking on the side button "..."

4. Uncheck Everything, just check "Use Timer" , and set it to 83 seconds.

Note : Steam bans any ip that login's a lot of times in less than 83 seconds of time intervals. Keeping any less than 83 seconds will result in a ip ban from steam and checker won't be checking any accounts and stating all accounts as failed, even if though they were working. This may seem slow but if you just keep the program on all the time and leave it on overnight your sure to get accounts

5. Now, Click on "Load" , it will load your combolist (Ill explain the combolist later if you don't understand)

6. Now, Click on "Check". It will start checking for accounts.

Combo-List

Using someone else's combolist will most likely result in not getting any accounts. They would probably be used or disabled/banned accounts.

Make a list Yourself by any method you can think of. (If enough people ask I will make another tutorial on how to make your own combolist, you can maybe google it and find something aswell, also if you really need you can PM me and I might make you a list depending on how busy I am)

Here is an example of my combolist

[IMG]<http://img219.imageshack.us/img219/4402/combolist.png>[/IMG]

And here is a picture of my success

[IMG]<http://img202.imageshack.us/img202/3488/proofjdp.png>[/IMG]

Note: only like about %50 of the accounts you crack will have games on them

Cracking Tips:

1. If you get unverified accounts, and you want to verify them to your email. Never, ever verify multiple accounts to a single email. Not even two accounts on one email. All accounts verified to single email will be suspended by Steam, which are of no use then.

2. If you get an error stating "Steam is having trouble Connecting to Servers" while checking id's yourself. That's because steam has banned your ip for 1 hour. If you have a dynamic IP, you can just turn Off and On your modem or connection and you can continue the process. For others, you will have to wait for an hour, until steam unbans you.

Last Minute Notes

- Note : Dont run the program while your Steam is ON. Turn off steam and then load it.

Thanks guys please leave any and all feedback it took me a while to write all this, by the way this method was taught to me by Eth4nol, a good friend so im sorry if you guys wrote any similar threads, I looked around HF first to check there weren't any threads similar to this one.

Hmm yea well a combolist is a combolist, meaning it would probably still work as long as its in the right format (username:password) but I guess some people are having problems on how to make their own combolist so I might release a method on how to do that, you can also try googling combo lists you might find some

Wheelz - July 14, 2011, 11:39 am

Well combo lists are kinda private I guess but I guess since I have a really big list I can post certain parts of it

Hmm if youve been banned that means you didnt set the timer to 83 seconds, you can have it at 1 second but your IP will be banned for an hour after like 20minutes of trying, if you have a dynamic IP you can just unplug your router then plug it back in, I havent tried proxies but im sure you could, you might even find out a way faster way to use this program, please post here about how the proxies worked out, that is if youre going to try them

hmm, thanks for the fast response. last night i used this without the timer and got banned than shortly after the ban expired i started again with the knowledge that you gotta set the timer to 83+ and got banned even with 85 second time interval. maybe it had something to do with the first ban or something.

I think that ends my question i have 30+ accounts checked. btw would it be against any rules to upload someones elses combo generator? cause i have one that seems to generate pretty good lists.

Hey,

yeah i found a nice tool in this forum "Combolist Generator" and it works pretty fine, BUT i think there is a chance from 00,1 % that u grap a correct name with a password. The easiest way is u take the names with the same password as the name is. But which guys are that stupid to set their login name = their password ?! this would be a bit to easy i think.

If steam bans you its only for 60 minutes and they never raise there bans you could get banned from steam like 3 times and it will always just be 60 minutes

As far as i know,he cracks steams with me and i sell it here and he maybe will do it on CF.

Also, this guide isn't the best around.He told me himself.

Also, he is the Original maker and poster of this guide.So, according to me he sure deserve some credits.

But, i know its his so i wanted you to give him credits.He won't mind if you post it.He is a good person,he never do.So for him, i asked you to give him credits.

Can you please make a tutorial on how to get combo list. Just because this is the noob section and we are not going to know what is a real combo list or not.

Today - July 25, 2011, 2:49 am

Wouldnt releasing your combo list mean everyone is trying to crack the same exact accounts? So how is this not just a username:password checked rather than hacker or cracker.

Wheelz - July 25, 2011, 2:58 am

Those are just example combolists, ill sell you some of my unused combolists for like \$5

Today - July 25, 2011, 3:14 am

So let me get this straight. A combo list is a list of user:pass of previously hacked peoples combos and hoping they have steam accounts? Or is it randomly generated in which case why isnt that random generator implemented into the bot like most porn pass crackers are?

(Jul 25, 2011 03:14 AM)W0lfcry Wrote: [\[CITE\]](#) So let me get this straight. A combo list is a list of user:pass of previously hacked peoples combos and hoping they have steam accounts? Or is it randomly generated in which case why isnt that random generator implemented into the bot like most porn pass crackers are?

Thats called a leeched combolist, I have a nice program that you just enter some random words than it searches the steam forums and gets like 1000 usernames at a time, thats how I get usernames, then how I get the passes is a secret

Tutorial is ok for me ;D NOt bad, but teh thing that arises in people's mind is about making our own combos which is the harder part while bruteforcing steam accounts. Unlike filehosts, you can't just run athena or staph combos you must leech them on your own using google or you must use passfiles for succesfull cracking. Passfiles is nothing but the user:pass ripped from some site databases ?

traxxx - October 10, 2011, 4:03 am

Put their username in then just add a password list.

Que. - November 6, 2011, 5:03 pm

This is one of the best tutorials about cracking steam accounts i've ever seen.

It's very detailed and mostly it will probably work. But for me, Steam Multi tool didnt work.

But im using Frozen Freeze, and that software is mutch better, well atleast thats my opinion.

But one more thing you've should have added to you're tutorial, "How to Make a Combolist" That's 50% of the point of cracking steam accounts. If people only downloaded combolists that have been uploading by other people, well then you will never crack a single account.

I'm using StaPH 1.25 to gain Combolist but for some reason the tool don't work anymore. So i'm currently looking for a new leeching tool.

So it would be great if you could mention a little about which program you use to make combolist's.

Your IP has been blocked by the steam servers.

Either wait 1 hour or reset your outside IP address before continuing.

No matter what seconds i put on it i get this.

9EH - January 6, 2013, 10:12 am

Too bad steam patched it, very HQ tutorial with great pictures and explanations.

Its because steam has already fixed the exploit that this uses read the bottom of the post.

Cheers m8 :D
