Thread: [\[Tutorial\]\[Beginners\]Changing Eye Color!\[For Complete Beginners!\]](#)

SIM-388794 - July 14, 2011, 6:22 am

*This isn't my work, but I learned from it so I figured I would share:

Here I will show you how I change eye color the quick and easy way.

Start:

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/eye.jpg[/img]

Finish:

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/eyecopy.jpg[/img]

First, open up your image in Photoshop, and zoom in on the eye(s) you wish to color.

NOTE: A quick way to zoom in and out, hold down CTRL and press the =/+ key to zoom in, or the -/_ key to zoom out.

Now, select your paint brush and choose a size appropriate for your image. Next, adjust your hardness. I keep mine about 30% for this.

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/1.jpg[/img]

Next, hit Q or click the Quick Mask button(circled in red below) to go into quick mask mode. From here, color your eye in with the paintbrush selected in the 2nd step.

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/qm.jpg[/img]

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/2.jpg[/img]

Now, go back to standard mode by hitting Q again, Everything but the eye should be selected.

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/3.jpg[/img]

To select the eye, go to Select>Inverse, or hit SHIFT+CTRL+I.

[img]http://www.photochopz.com/forum/tutorialpics/eyecolor/4.jpg[/img]

Now, create a layer from the selected portion by hitting CTRL+J. When you have created this layer,

and have selected it, hit CTRL+B to bring up the color balance. Play around with the colors till you get what you like. Color balance isn't the only way to edit it, now that you have a layer from the eye, you can edit it any way you like.

Try adding some filters, colors, layers, etc. And post your results here. Good luck!

xXxRay - July 14, 2011, 7:11 am

Nice TuT bro !! This may be also done using Gimp . Thanks for the share .

-DeLuXe- - July 14, 2011, 7:35 am

Nice tut but

I find it easier to use the pentool when you do this because you can create curves and get a sharp line around the iris. But nice tut

Off - July 14, 2011, 7:47 am

Nice tutorial Bro !!

I have tried this out !!

Works great for me !!

Thanks for sharing it !!

g0dspeak - July 14, 2011, 8:57 am

Great tutorial.. I'ma try it when I get some free time :P Thanks

Cyber-Security - July 14, 2011, 11:20 am

It actually works! Thanks for this! Here is my result:

SIM-388794 - July 14, 2011, 11:22 am

Thanks for all the feedback guys, I know this isn't my work but it really helped me a lot. At least I can do ONE thing in Photoshop now... xD

The Coon - July 15, 2011, 5:41 am

I'm going to try this out now. Brilliant tutorial :)

When I was zoomed in while editing it, it looked horrible but now it looks so good zoomed out. Great tutorial man 10/10

Here's my image: Spoiler [\(Click to View\)](#)

You can color over the pupil and it won't change the color (it makes it a lot easier). Also, a tutorial just like this with the same photo has already been posted.

ven0m - July 17, 2011, 4:46 am

thanks for the thread.

was looking for this kinds tut.

great share.

~ven0m

Red Acid - *July 17, 2011, 8:35 am*

Nice tut bro.

keep it up.
