Thread: [Auto it auto typer](#)

domukas00 - July 15, 2011, 8:26 am

Hello i wan to make auto typer with auto it. I wan that when i press "up" key, auto typer press "enter" type "/fish" press "enter" wait for 10seconds, then repeat again. And i wan that when i press "down" key autotyper stop doing this.

I was searching for tutorials in internet and i made this:

```
hotkeyset ("{UP}", "_Toggle1")
Global $Toggle1 = False
while 1
    If $Toggle1 Then
        send("{ENTER}")
        sleep(100)
        send("/fish ")
        sleep(100)
        send("{ENTER}")
        sleep(10000)
    wend
HotKeySet("{DOWN}", "abort")
Func abort()
Exit
EndFunc
```

[But when i try to compile it to exe it gives error with HotKeySet("{DOWN}", "abort"), Can somebody help me to do this script?

:) You can get Auto Typer from this link: <http://www.2shared.com/file/vLQszBa2/EnjoyTyping.html> :)

There are some errors I could mention...

- 1) You're missing an EndIf statement.
- 2) There's no "_Toggle1" function defined.
- 3) There are many illegal characters... Try typing again with some fresh text editor.

Here's my implementation, anyway...

Code ; set the hotkeys

```
HotKeySet("{UP}", "Toggle")
HotKeySet("{DOWN}", "Abort")
```

```
; variable for toggling
$toggle = False
```

```
; functions for the hotkeys
```

```
Func Toggle()
    $toggle = Not $toggle
EndFunc
```

```
Func Abort()
  Exit
EndFunc

; send the while the script has not been aborted
While True
  While $toggle
    ; send the desired message and wait for ten seconds
    Send("{ENTER}/fish{ENTER}")
    Sleep(10000)
  WEnd
  ; sleep to keep the CPU usage minimal if possible
  Sleep(1) ; change this value if necessary
WEnd
```
