Thread: [\[EASY\] Rainmeter PIMP OUT YOUR DESKTOP! \[HOT\]](#)

Ayden™ - July 16, 2011, 9:36 pm

Hello Today im going to show you how to get rainmeter and tell you what it is!

What is Rainmeter?

Rainmeter is a desktop customization platform. Through Rainmeter, you can enhance your Windows computer at home or work with skins: handy, compact applets which float freely on your desktop, much like Windows Sidebar gadgets, or dashboard widgets for the Mac. Rainmeter skins provide you with useful information at a glance. It's easy to keep an eye on your system resources, like memory and battery power, or your online data streams, including email, RSS feeds, and weather forecasts. Many skins are even functional: they can record your notes and to-do lists, launch your favorite applications, and send your tweets to Twitter - all in a clean, unobtrusive interface that you can rearrange and customize to your liking.

Could I see what it looks like first?

hey guys. i've been lurking for the past 2 days, just wanted to say that i like the site so far, seemingly nice community, and nice release. side note, since i cant pm the 3rd desktop owner, has anyone learned what theme/pack he's using? i happen to have the same background. (BRS ftw)

I asked him and he sent me a pm

"I use the default theme that you get when you install it for the recycle bin and then i have [http://browse.deviantart.com/?qh=\\$io...r#/d2jwfai](http://browse.deviantart.com/?qh=$io...r#/d2jwfai) not all of it but i use certain ones then i hide the tool bar on the right"

:) Enjoy.
