Thread: [Questions about Rinlogger](#)

iEvolallday - July 18, 2011, 3:54 am

Could your victims firewall potentially block the log from sending? Should they have it disabled?

+mK - July 18, 2011, 4:12 am

No, although if you were using a RAT, that is a possibility, but I highly doubt it.

If anything - it'd be their AntiVirus, or their OS doesn't accept it. I'm not sure, haven't used Rin before.

iEvolallday - July 18, 2011, 4:33 am

Thanks for the feedback, most people on here don't respond. I posted on their main thread a few mins ago.

Kom - July 18, 2011, 11:01 am

Yes, the firewall could potentially block the logs from sending, even if it is not a rat. Antivirus is a more believable blocker though, most antiviruses have built in firewalls as well.

If you are wondering why you are not getting logs, it could be because the logger is not FUD meaning their antivirus could of detected it and deleted it. Remember, just because someone downloaded your file, does not mean they ran it.

MegatronIsHere - July 18, 2011, 12:19 pm

nice thread keep up the good work.

iEvolallday - July 21, 2011, 12:52 am

I know for a fact they ran it. The logger just is not reporting anything.

Zero?? - July 21, 2011, 12:58 am

I just discovered something. If you're internet speed is slow or under heavy usage, the sending operation might time out.

OldBeardedNinja - January 10, 2014, 6:24 pm

Question, Can you put any email you want in RinLogger? as in @hotmail.com, @live.com, because it won't work if i do it, only gmail works.

Question#2, everytime i put in a @gmail.com account it works perfectly fine, but where do the logs show, i don't even know about @gmail.com that much, can someone send me a picture of the logs showing in @gmail.com and where the hell the inbox is.

Because if I did sent a rinlogger to someone, idk where the logs go, i need help please?

adog353 - January 10, 2014, 7:16 pm

You should be able to put every email.

Check your junk folder.

OldBeardedNinja - January 10, 2014, 7:34 pm

Well if we can put every email, what do we put in the section

"Smtp Server Address"

and

"Smtp Port Number"

Please reply as soon as possible, thanks
