Thread: [\[Tutorial\] How to find admin pages](#)

HaxOr? - July 18, 2011, 3:38 pm

Hello HackForums. Today im gonna show how to find admin panels when you have info to login.

There's a few options to find it.

1) Adding to URL

[www.site.com/admin](#)
[www.site.com/administrator](#)
[www.site.com/admin.php](#)
[www.site.com/login](#)

2) Online scanning (Link is at the end)

Picture:

Spoiler ([Click to View](#))

[img]http://images.devs-on.net/Image/5EvjRnNEUBs1j0E-Region.png[/img]

3) Perl scripts (Script and Active Perl link will be on end of this page)

For this you will need install Active Perl...

4) Programs (Links at the end of the thread)

You can use Havij or Reiluke's admin finder

5) Scan ports (Link at the end of the thread)

For that use nMap. First you need to get your websites IP address.

Go to cmd (start>run>cmd) and type ping site.com (without http://www. After that paste the IP in nMap and click 'Scan'

When finished pick tab 'Ports/computers'

6) Crawl website (Link + crack to acunetix)

Just scan all files and folders on site. Acunetix is the right tool

7) robots.txt

Check robots.txt

www.site.com/robots.txt

7) Google

Dork: site:webpage.com "admin"
site:webpage.com "login"

Downloads and links:

Online scanner -> <http://sc0rpion.ir/af/>

Download Perl -> <http://www.activestate.com/activeperl/downloads>

Perl script -> <http://pastebin.com/WWZszURW>

Havij (Uploaded by me) -> <http://www.mediafire.com/download.php?s2iiaabz87i7t8a>

Reiluke admin finder (Uploaded by me) -> [Automatic download](#)

nMap -> <http://nmap.org/download.html>

Acunetix (Uploaded by me) -> <http://www.mediafire.com/download.php?vam13z7pe1b85kl>

Password for locker .rar is

Nice compilation Dr.???x0®? Now nobody has an excuse saying they can't find the admin page.

Example - July 19, 2011, 6:17 am

I thought it was self-explanatory how to find an admin page.

It seems that some are just not gifted with the power of Google. :/

You can try and bruteforce it but it would take alot of time and in most cases it wont work.

Best way is to exploit the site (SQLi etc.) and gain admin password.

It's not really hard to use it.

If you want to scan for vulnerability in a site go like this:
