Thread: [Where can I get a hash code for someones Facebook account so I can hack it via MD5?](#)

rockhopper789 - July 18, 2011, 4:09 pm

Is there a simple generator which will allow me to get a hash code which I can use in PasswordsPro to hack a facebook account.

Cheers

Sweat Heart - July 18, 2011, 4:16 pm

No, what you're suggesting is not possible unless you're on the same network as the person and the (LAN) network is ARP spoofable.

rockhopper789 - July 18, 2011, 4:32 pm

So is there anyway of producing a hash code from a facebook account?

I wasn't quite sure what you meant. Can you recommend any other ways of accessing a FB account?

SIM-487530 - July 19, 2011, 7:27 am

you can hack FB by using phishing or keloggers techniques

leroyjenkins69 - October 24, 2013, 3:41 pm

Use Cane and Abel if your on the same LAN and use the sniffer and APR tool to sniff out the login information. You have to be on the same network.

Please look at the last post date before posting. Right now you're gravedigging a 2 years old thread.

Thank you.
