Thread: [\[USB\]Best Multi-boot Program \[USB\]](#)

g1ll1s - July 18, 2011, 9:46 pm

Found this great program that can create a multi-boot usb drive which can house many linux distro's/os's which can be selected from a bootloader. Its a great tool for booting into linux, ubuntu, etc. with one usb flash drive. It also allows you to download .iso right from the program and add them to your multi-boot list.

Please PM me for the link to the program. (NOTE: Link is to actual website of the program.)

Thanks everyone, and I hope this helps. ?

GosthShadow - July 19, 2011, 10:51 pm

Is this it? <http://www.pendrivelinux.com/yumi-multiboot-usb-creator/>

g1ll1s - July 20, 2011, 2:19 pm

Nope! This one is much better!

getsomepie - July 20, 2011, 2:42 pm

Why the hell should we have to PM for a link to the program?

I could understand if someone made a RAT or something and wants to keep it UD longer, but this is ridiculous.

Eminent - July 20, 2011, 4:31 pm

Come on dude. You want us to PM you for a public program? This is just getting ridiculous.

kahuna777 - August 4, 2011, 12:33 am

The program is called Multisystem. It is actually a Linux program but it works very well. If your in IT it's a good tool to have it can bail you out of some tough situations. I have 7 different distros on mine.
