RedX - September 20, 2009, 5:09 pm

Okay as I said I would download it I have and I spammed my friends email address and sent him 50 messages...Like an hour later I checked and it work...and he sent a message back saying "wtf"

At least I think it was my friend I put verison and he didn't even use it..I only thought he did so I then checked and it was nextel(sprint) i tried using that gmail sent back a message saying FAILED to email...Verison worked though!!! LOL Im gonna bring this up to him but not say it was me...Im gonna be like, hey somebody sent me like 50 texts last night! lol

Cant wait to see what he says...Thanks Beaver!

Beaver - September 20, 2009, 5:11 pm

The next update will have the ability to import a email/password list so if one fails it moves on to the next one in the list

RedX - September 20, 2009, 5:14 pm

Nice. Can't wait!

Please help, I love this program but i have a few problems I didnt in the regular version. When I load the settings it says "Unhandled exception has occured in your application..." and then all the settings go blank. Also when I start bombing it says I typed the username/password in wrong but its definety not because I copy and paste it. So i have to copy and paste a few times before it actually starts bombing.

I didn't chage anything concerning the load/save settings from the older versions, so i don't know

why u r getting errors. The email/password error will come up anytime the program has trouble sending a message, so it may not be the email or password but something else like the gmail server or something like that

***** JIT Debugging *****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging

enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

Lol VirusTotal has it already Beaver, your KeyLogger is now Detectable. Binding it with SMS Bomber which doesn't work. Funny kid.?

Beaver - September 28, 2009, 11:01 am

it's just a false positive, but if you really dont trust me then run it in sandboxie

it was just NVT messing up
here is the VT scan

<https://www.virustotal.com/analysis/7839fcf2a72b6e862889902032b49a6ce4612e004440a16b9acb4df280121e97-1254162049>

NVT must be messing up

<https://www.virustotal.com/analysis/7839fcf2a72b6e862889902032b49a6ce4612e004440a16b9acb4df280121e97-1254162049>

He did, lol but use a KeyScrambler, no biggie. Or Remove the file Malwarebytes. No Problem.

RedX - September 28, 2009, 1:38 pm

I have both Malwarebytes and KeyScrambler Pro both registered. xD

malware bytes does not detect it. =(?

It can be fixed I am sure.

Beaver - September 28, 2009, 1:55 pm

it's not infected NVT has been messing up lately with stuff made in .net
look at the virustotal:

<https://www.virustotal.com/analysis/7839fcf2a72b6e862889902032b49a6ce4612e004440a16b9acb4df280121e97-1254162049>

then look at the novirusthank it is the same MD5 and everything:

<http://scanner.novirusthanks.org/index.php?session=421906319101022883446794756231749555954299572>

the VBA32 is obviously messed up on NVT

RedX - September 28, 2009, 1:59 pm

@ Guerriero420, I am doing a full system scan atm with Malwarebytes.

@ beaver, you are right.

What is that number?> prob your dad's cell number, which is a cop :o, or just someone that you dislike a lot, and wouldn't mind if a few hundred members bombed him so hard that his phone explodes.

Wow beaver best bomber ive ever seen thanks

King C - January 1, 2010, 7:53 pm

Hey Beaver, first off, love the program. My friends and I love to mess with each other. It is quite entertaining.

Anywho, I see the program has the option of custom STMP

Well I wanted to try with yahoo, to see if it had a sending limit.

So I used-

STMP: smtp.mail.yahoo.com

Port: 465

Going with the information found at <http://techblissonline.com/yahoo-pop3-and-smtp-settings/>

I tested and it I got the error:

There is an error sending your message, would you like to change your email/password?

Did I screw up the STMP and port or does it not actually support it?

Either way love it and thank you again

that error can pop up in multiple situations. For example if they are in fact incorrect credentials, wrong smtp settings, invalid cellphone number/carrier selection or if msn is blocking it

I even made a new gmail account and idk if i should check that SMTP option because idk what it means and i do put it what do i put there and in email? Everytime i try my active email with it for gmail it says its wrong. : / help

cOld fus1on - December 13, 2010, 4:15 pm

NICE WORK!!!! Beaver!!!, I'm lovin' it, it works prefect!

for the poster before me, if u have a gmail account, don't mess with the smtp, just put ur account info. in, n ur good

Name is Rampage - December 13, 2010, 10:00 pm

i did, I didnt touch the smtp. Just put my GMAIL email in and its password and filled the rest in and it says somethings wrong with it.. like my gmail is setup as its self but it's using a backup @yahoo.com

The pics are up....

Its easy to use, you type the number, put your email, and maybe some other information, and its done. When you see if you will know exactly what to do.

total fail. tried my gmail and other 5 email accounts, all failed.
I keep getting an error that says: There has been an error sending your message would you like to change your email/password?

When i hit..

>Yes - it lets me change email/password, then provides the same error
>No - Would you like to stop sending the current bomb order?

When I hit..

>Yes - Success! 1 message sent!
>No - Success! 1 message sent!
Both send nothing.

help plz

I have a question regarding international phones.

I'm trying to bomb this number: 38762709424
Which is from Bosnia. However, the person who owns the phone is currently in the US, so they must be using a US cell provider. Which carrier should I send the texts to?

Thanks

sleek_geek - December 30, 2010, 5:05 pm

Awesome work ? this sucker hits em hard too...is there any fear of being back tracked that anyone is aware of because I tried it on my own phone with just one message and I got it instantly.

Thanks Beaver ?

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />  
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box."

any help with this?

I think it's a compatibility issue. You don't have .Net framework installed or u have a x64 bit machine.

I dont want to reply , (might cost) but how do i send it and make it not say this and say the message.

Anybody got a solution on how to bypass this message and just display the text i put in?

griefage - April 12, 2011, 9:49 pm

tried it and it seemed to work, then it gives the message 0 messages sent successfully. is that due to the limit of gmail messages sent? or the phone being off etc?

finally ive been looking for a program like this

Taco Bell Dog™ - August 5, 2011, 7:50 am

For the people that see it say sent but nothing shows up on your phone or gmail account.

The real thing works. The only trick is lets say you want to bomb 86734512345. It puts it as

Code 86734512345email.uscc.net

When in reality it needs to be:

Code 86734512345@email.uscc.net

So how do we do this?

We utilize the create a list setting.

Bomb the Phone number for 1 text. Then it adds that number to the list.

After that save the list and go in and edit the email with the @ symbol. Then load the list and be sure to use the "BOMB ALL VICTIMS" feature and it works nicely.

For the people who want to send to crazy phone companies.

It is quite simple as all you are doing is sending an email to the carrier SMS email. So all you need to do is find a huge list of carrier SMS emails and use the custom email feature so YES it has the potential to send to just about any phone on the planet.

zackthewack - October 11, 2011, 8:59 am

it won't work unless i put information into the custom carrier place but it doesn't have a custom carrier... it says that the value can't be blank. i know what the email is for the sms to the phone, but it doesn't make it any easier to do it with this one then other ones.

I always sent up to 70 then login to the account, delete the messages and wait a little while (5 minutes is good) then send 70 more.

I done it to a bunch of people and my emails still work.
