Thread: [DDoS Protection and review](#)

Refrigerator - July 20, 2011, 2:52 pm

UPDATE: If you would like to read my thread about FREE DDoS protection click here, <https://hackforums.net/showthread.php?tid=1505730>

So I think this should go here because it deals with protecting from attacks but it deals with hardware too.

For a while now I have been the point of attention for a few major DDoS attacks on my website and servers I run at home. Now I tried doing a lot of software protection but nothing really worked so I found a better way of protecting from ALL DoS and DDoS attacks, It might not be the cheapest way for you all but it works.

<http://www.newegg.com/Product/Product.aspx?Item=N82E16833182063>

I thought that when I bought it, it might slow attacks down and just do general protection but I am very happy with what it has done already. The unit itself is very light not much more than my router, and is very small. I was thinking it was going to be a big bulky device but it is very nice. It has a very nice web interface and unlike other hardware I have tested it really doesn't cut the speed down too much. On my home network I have seen about a 3-5Kb/s decrease on upload and download speed which is really nothing. Most people won't even see it.

The logging looks like this, <http://pastebin.com/NMz9KCAX> You can also change what it logs like I have mine to log, Connections to the Web-based interface, operations (startup, get time etc) and Known DoS attacks and Port Scans.

But it can also find Attempted access to allowed sites, Attempted access to blocked sites and services, Port Forwarding / Port Triggering, and Wireless access

The price was well worth it as you can see I have had a few attacks and I am still online and I hit 48 hours a couple hours ago ?

treehuger9000 - July 20, 2011, 2:53 pm

Looks good, 500\$ is pretty pricey though.

Refrigerator - July 20, 2011, 2:54 pm

I don't mean to judge here but did you even read the whole thing? That wasn't even 30 seconds? With the price comes protection I would say the price is a ? ton but I think it was worth it.

treehuger9000 - July 20, 2011, 2:55 pm

I read most of it yes, and I understand you get what you pay for.

I bet it works great.

HustlerAO20 - July 20, 2011, 3:05 pm

Looks interesting. I don't think it would be worth buying for me since I'm just a kid :D . So have you been attacked, since you bought it?

Refrigerator - July 20, 2011, 3:53 pm

Yes about 13 attacks now and I had another member hit me up a little while ago and there was zero lag.

stevey123321 - July 20, 2011, 5:02 pm

Oh wow, its pricey, but with all that it has to offer, the price would be worth it, but only if your protecting a valuable asset.

Frida - July 20, 2011, 5:04 pm

WHOA! Wasn't expecting it to be that pricy, but if it works and you need it, then I suppose it's worth it.

_0xE2 - July 20, 2011, 5:10 pm

Windows 2000 DDoS mitigation software firewall:

<http://www.fortguard.com/>

Linux DDoS mitigation software firewall:

<http://www.rfxn.com/projects/advanced-policy-firewall/>

Those might help as well in coalition with the hardware firewall. ?

There are some that are under 200 dollars but they are crap, this one was cheap too there are some that run over 3000 dollars.

GØÐ - July 24, 2011, 9:13 am

Ever tried changing your IP. Just call your ISP. (internet service provider) I bet you play xbox. :D

Refrigerator - July 24, 2011, 5:30 pm

(Jul 24, 2011 09:13 AM)GØÐ Wrote: [\[CITE\]](#) Ever tried changing your IP. Just call your ISP. (internet service provider) I bet you play xbox. :D

Well yeah but there are 2 down sides to that, the first is it takes time like you got to call support tell then whats going on why you want your new ip etc. The second is here my ISP when they renew your IP it disconnects you for about 30 seconds. Now I think that is a ton of work for something that could be avoided in the first place.

M?nster - July 25, 2011, 1:17 pm

Kind of pricey but worth it, i just setup my router with the free method you posted hopefully it works.

Gorhax - July 25, 2011, 2:24 pm

You spent \$500 to prevent yourself from getting "hit off" on xbl? Lol.. you sad bastard..

Refrigerator - July 25, 2011, 6:41 pm

(Jul 25, 2011 02:24 PM)Gorhax Wrote: [\[CITE\]](#) You spent \$500 to prevent yourself from getting "hit off" on xbl? Lol.. you sad bastard..

No bro to be honest I don't even use xbl you sad bastard. Hell I don't even own a xbl account any more, you sad bastard.

GØD - July 28, 2011, 3:08 am

Actually I just told them that I get spammed a lot and they changed it in 24 hours. ?

Sutton2k9 - July 28, 2011, 3:16 am

Well if it works it's not that much as if you want to buy DDos protection you are looking at \$300 a month any way.

Refrigerator - July 28, 2011, 3:23 am

(Jul 28, 2011 03:08 AM)GØD Wrote: [\[CITE\]](#) Actually I just told them that I get spammed a lot and they changed it in 24 hours. ?

Yeah in 24 hours with this there is no need to wait, if you have servers that have people using them 24/7 you cant wait 24 hours to switch an IP.

Gorhax - July 28, 2011, 3:25 am

You can't really call me a sad bastard when you was the one who spent out \$500 just to make it so you wouldn't disconnect from the internet for a couple of seconds.. Sad sad sad little boy, go cry sad sad sad little boy.

EDIT: Why do you have a thread up called "How to not get hit offline on xbl" (or some shit along those lines) if you don't even play xbox?

Sutton2k9 - July 28, 2011, 3:26 am

(Jul 28, 2011 03:23 AM)Tuna Wrote: [\[CITE\]](#) Yeah in 24 hours with this there is no need to wait, if you have servers that have people using them 24/7 you cant wait 24 hours to switch an IP.Yea lol, 24 hour to swap your ip-address then they take 2 seconds to ping your site stop the attack and restart it..

Because I like to help people, something you clearly don't do, And yeah I spent \$500 dollars so I don't get kicked offline, Your just jelleh because I have money to spend like that and you don't. Back off... Also I am not a little boy I am 6 foot 3 and I weight 246, if anything I am the complete opposite.

Gorhax - July 28, 2011, 4:45 am

Yeah bro I am 9ft 3in I weigh 568 pounds, I play basketball with 50 cent every thursday and I am also a prophet. You can pretend to be anything you want to be on the internet can't you? I would rather spend \$500 on something more useful than just a shitty little hardware firewall.. I bet you feel like a right big man because none of the kids in your xbl party can take you offline with their shell booters. Extremely sad...
