Thread: [\(Tut\) Blocking SOME DDoS attacks for little or no cost](#)

Refrigerator - July 20, 2011, 5:25 pm

So I bought a hardware firewall on newegg it was a great buy if you want more info on it here is a link <https://hackforums.net/showthread.php?tid=1505316>

Here is a quick tutorial on blocking SOME DDoS attacks for no cost if your router supports it, or little cost if you buy the router.

As I said this will block SOME attacks not all, most shell booters wont be able to attack you but some botnets will still take you offline, also if you run a botnet/booter at home this will disable it so you have been warned.

The router I am using today for this tutorial is a Netgear N150 Wireless router model number WNR1000v2 cheap router that I picked up at Walmart for under 100 dollars, I will be connecting to the internet today with PPPoE.

Here is a photo of the web interface,
[img]http://dl.dropbox.com/u/35568881/HF/protect/one.PNG[/img]

We will be going to block services,
[img]http://dl.dropbox.com/u/35568881/HF/protect/two.PNG[/img] We will want to add a blocked service

[img]http://dl.dropbox.com/u/35568881/HF/protect/three.PNG[/img]

You will want to leave the service type as user defined and block the ports and protocols listed below you should also pick a name I just named mine one, two, three, and so forth.

Now I am sorry but I am not sure which every port goes to, I know each port is some port some type of DDoS attack uses, but if you block something you need like if you have a game on 16660 you can unblock it very easy too, The ones I blocked were

1524 tcp
27665 tcp
27444 udp
31335 udp
16660 tcp
65000 tcp

To anyone who says this is fake and can harm you send me a PM this has been verified by Cisco and I don't think they would lie to you!

Frida - July 20, 2011, 6:20 pm

lol i used to block every port on my router besides port 3074 then go on xbox and talk shit to kids who could hit, and then when I never disconnected they couldn't figure out why.

And I can 100% Vouch that blocking ports wont hurt you unless you need to use those ports for something, and in that case then just unblock them!

Xp3 - July 20, 2011, 6:55 pm

Nice tutorial, i'm sure it will help some people out ?

Shellboothacker - July 20, 2011, 6:55 pm

thanks for this post, It will help me a lot!

Refrigerator - July 20, 2011, 7:01 pm

Sure everyone your welcome, this was also verified by Cisco.

Kosmos - July 22, 2011, 5:51 am

Very nice tutorial, thanks bro! I'll be sure to use this in the future. Vouch for Hajdar<3

Refrigerator - July 22, 2011, 6:35 pm

(Jul 22, 2011 05:51 AM)GmZ Wrote: [\[CITE\]](#) Very nice tutorial, thanks bro! I'll be sure to use this in the future. Vouch for Hajdar<3

Thanks! Hope it helped you.

xZ3lLx - July 22, 2011, 6:48 pm

zomg you can also play xbl with your modem's Ethernet unplugged and be 100% protected from every DOS ATTACK EVER

Faith - July 22, 2011, 6:48 pm

(Jul 22, 2011 06:48 PM)xZ3lLx Wrote: [\[CITE\]](#) zomg you can also play xbl with your modem's Ethernet unplugged and be 100% protected from every DOS ATTACK EVER

I vouch for this method.

VOUCH.

What router do you have? I'm going to buy a new router.

Yeah this is a totally legit story because all the good xbox e-fags for sure don't know that the best port to take someone off on xbox is 3074..

lolsonlols - July 23, 2011, 8:40 am

Want real DDoS protection?

<http://www.hardware.com/store/cisco/7606-RSP720CXL-P?campaignid=1-47513371>

all your router will do is take shit from anything with a faster upload than you.

Refrigerator - July 23, 2011, 9:13 am

Do you have any idea what you are talking about? You posted a Route Switch Processor I post a hardware firewall MADE for DDoS protection. Please do your research before you post.

Thanks. Well I'd imagine there's more ports you need to block though. When I get DDoSed, my log shows ips from over seas with random ports like 54643.

Sachaownz - July 23, 2011, 10:48 am

This is a really good Tut, i'm adding this to my post : what to do when you are getting ddosed! great job mate!

_0xE2 - July 23, 2011, 10:53 am

Anybody who knows anything about networking and ddos attacks knows that on a home connection blocked ports wont do anything.

Stop being cheap and buy a ddos protected VPS,they're cheap as fuck.

lolsonlols - July 23, 2011, 11:50 am

You think i meant just that alone? and I'm the one who's dumb? oh man.... lol. I'm telling you, a shitty \$100 router isn't going to block anything.

(Jul 23, 2011 10:53 AM)Awknet Wrote: [\[CITE\]](#) Anybody who knows anything about networking and ddos attacks knows that on a home connection blocked ports wont do anything.

Stop being cheap and buy a ddos protected VPS,they're cheap as fuck.My point exactly.
?

?

Ah well if you would like you and Awknet would like my IP you can hit it as much as you want, you think this is a method that only works for me? No buddy this HAS been verified by Cisco so I really don't think you are smarter than Cisco... If you want fell free to PM me I will let you have me IP and you can hit it 24/7 and I wont lag a bit and I will keep my full speed. You act like your so smart but you and Awknet are the only posters who said it wont work and you and him are the only ones who are trying to out smart Cisco leave my posts bro you know nothing. Why did you tell me I need a

routing switch do you even know what that is? ? I am disappointed, maybe use Google it might help you further.

-Disconnected- - July 23, 2011, 5:40 pm

Nice TuT , wrong section but keep up the good work

alexander_ru - July 23, 2011, 7:03 pm

One more alternative related to DDos protection, thanks.

Refrigerator - July 23, 2011, 7:30 pm

(Jul 23, 2011 07:03 PM)alexander_ru Wrote: [\[CITE\]](#) One more alternative related to DDos protection, thanks.

You are welcome. (Too short)

Soulja - July 23, 2011, 9:40 pm

I have the same router nice tut btw :)

Source of your statements?

you'll probably give me some # ip to hit too. Because your router won't do anything at all.

Refrigerator - July 24, 2011, 5:27 pm

(Jul 24, 2011 05:34 AM)lolsonlols Wrote: [\[CITE\]](#) Netgear isn't developed by cisco you fool. Source of your statements?

Alright bro, You are clearly mad not like trolling but MAD as in not right in the head, a # ip? ? Send me a PM I will get on teamviewer with you and we can go to ipchicken together and I will bring up my router logs and you can see your attack will get no where and hell Ill even download some files while your doing it.

As for the net gear is not developed by Cisco yeah I know but this information was tested by Cisco one of the biggest leaders of networking technology. Most routers don't support this, Hell I don't even think all Cisco routers do, I just saw something good and I had something good and it worked out. Again PM me, then give me some way to contact you and I shall give you my teamviewer info we can get on ipchicken and you can hit, or ask other people to or do anything you wish.

Also I never said it was developed my Cisco I said Cisco verified this, maybe you should read before you post you fool. Even so Netgear is not the biggest router type out there it is Linksys which is developed by Cisco.

Why would they have thousand dollar firewalls around if a shitty 100 dollar router could do the same thing?

If a shitty 100 dollar router can block ddos attacks why would anyone have ddos attacks at all if anyone with 100 dollars can block it?

You're an idiot.

HustlerAO20 - July 26, 2011, 12:46 pm

Lol his router is like 40\$ I believe on amazon. It does seem too good to be true.

HaVoKkRunzU - July 26, 2011, 2:15 pm

nice dude it is alsome than for the good thread :)

Refrigerator - July 26, 2011, 5:18 pm

(Jul 26, 2011 12:46 PM)HustlerAO20 Wrote: [\[CITE\]](#) Lol his router is like 40\$ I believe on amazon. It does seem too good to be true.

Then go out and buy one and test it out smart ass, if its only 40 dollars its not a big waste...
