Thread: [\[Release\]Screen Lock \[lock the screen with a pass\]](#)

0xE9 - September 20, 2009, 12:02 pm

i have made a program where you put in a pass word then confirm the password then click confirm then you cannot do anything in less you put in the password (you can just open task manager and end the process)
but its still a cool program.

100% Credits to me(cheetos)

?rauma - September 20, 2009, 12:04 pm

Looks okay, but a bit useless since task manager can disable it.

0xE9 - September 20, 2009, 12:06 pm

good for locking out parents lol and little brothers and stuff

or you can block task manager

Xdem0 - September 20, 2009, 12:07 pm

Maybe disable ctrl + alt buttons while its running. Or even better, disable the whole keyboard. Then add a mini on screen keyboard to enter the password. Even so if you did it that way, your protected against any form of keylogging aswell.

Just a thought.

cobija - September 20, 2009, 12:09 pm

why not just win + L to lock the computer?

0xE9 - September 20, 2009, 12:12 pm

cobija not all computers have that command

cobija - September 20, 2009, 12:13 pm

well then, nice attempt at making a lock program =]

NinjaGeek - September 20, 2009, 12:13 pm

(Sep 20, 2009 12:09 PM)cobija Wrote: [\[CITE\]](#) why not just win key + L to lock the computer?Because an unwanted individual can restart it and access throught Admin(if no password)
Locking the screen keeps unwanted people far away from your pc

@OP

Nice one but you should really work a bit more on this

Ryxa - September 20, 2009, 12:45 pm

Is it that hard to press the reset button on the computer?
>.>

Mr Smith - September 20, 2009, 12:49 pm

CTRL + ALT + DEL Bye Bye Screen Lock

0xE9 - September 20, 2009, 2:12 pm

GeneralDee i love your sig man my new screensaver

-i will add a few features like ,you cant do ctrl+alt+del

stef111007 - September 20, 2009, 2:22 pm

Looks good but work on that taskmanager problem

Tipps: Disable specific Keys , freeze until a specific Key combination is pressed

0xE9 - September 20, 2009, 2:24 pm

kk thanks man

>.>

well actually it is....

First there are way to disable it (yeah you can't then start the pc) but few tweeks and normal user will never be able to re/start/shutdown your system
and second most users will try logining in and fail and think damn they never get the tought to restart the computer

Mr Smith - September 20, 2009, 6:14 pm

Just add it to start up and block user input and use an on screen keyboard which are easy to make

SLAPYA - September 20, 2009, 6:14 pm

incredible program, although you can simply close it out with task manager, it works great for 95% of the people in this world who don't even know what task manager is lol

Kensfield - September 20, 2009, 6:19 pm

really good job !!

please add more feature like another user said

0xE9 - September 20, 2009, 6:36 pm

kk i will thanks it will be updated soon

hurmony - September 20, 2009, 10:02 pm

Stop Ripping Source.

0xE9 - September 21, 2009, 6:26 pm

????? i made this i never ripped it...

BuyOMC - September 21, 2009, 6:48 pm

give us the source code for this?

0xE9 - September 21, 2009, 6:55 pm

i might give the source....

2short

Ad1ct3d - September 21, 2009, 7:00 pm

You create nice program. Great job man

Lazydude2000 - September 21, 2009, 7:01 pm

Very interesting, i like it :D

0xE9 - September 21, 2009, 8:01 pm

thanks guys that means alot

@OP

Nice one but you should really work a bit more on this

You can restart by unplugging the fucking computer. No code against rl.

Kensfield - September 21, 2009, 9:23 pm

Can you give me Source code??

What language you write in ?

H4ckThePlanet - September 21, 2009, 11:05 pm

Yup. you can use task manager, cmon kid think...

6e756c6c - September 22, 2009, 1:09 am

I*, programmed this in Visual Basic .Net, a year ago. It was designed for XP and to my knowledge still works in XP (Ctrl+Alt+Del does not work.). The reason I created this is while although I rely heavily on the Win+L shortcut, there are situations in which I can't use it conveniently.

For example, if you are in a video call on MSN - pressing Win+L will close your call(s). It will also

cause the screen to go black in some games forcing you to restart them.

I may update it eventually to work in Vista, but I'm not sure whether or not it needs to be.

I am friends with him I told him to come here xD. You deserve a ban imo

mcjoecool - September 23, 2009, 1:07 pm

Nice if you programed in vb theres a code line thats makes it invisible in task manager. Have a look for it :)

Nice work :)

FirstClassHacker - September 23, 2009, 7:40 pm

Pretty good (: I love using this. Please make a prompt when someone is using any keys except letters and numbers. And Suggestion, block the power button. xD.

Multihacker - September 26, 2009, 3:19 am

nice program thanks friend

Ralanar - *May 1, 2010, 3:01 pm*

ur a fake, u just changed the title of "Areon Lock" u didnt even make changes to the form, will post a screenshot of areon lock in a while

colby100 - *April 16, 2011, 9:06 am*

This is great i hate it when my brother goes on my pc but i dont like logging off and when i open task manager it just opens behind the program this is great

H-GaMe - *April 16, 2011, 11:30 am*

good job, thanks for sharing

vmaster - *January 8, 2014, 11:57 pm*

Thank you for sharing. it worth to try
